A Port Arthur press report of Aug. 17 stated that the Northern Navigation Co. was about to purchase the s.s. North Land, a passenger ship built in Cleveland, Ohio, in 1895, and that she will be refitted, and placed in operation on the Great Lakes in 1921. The s.s. North Land, which was formerly operated by the Northern Steamship Co., Buffalo, N. Y., between Buffalo, Duluth and Chicago, was cut in two at Buffalo in the autumn of 1919, and reported sold to the Davie Shipbuilding & Repairing Co., Lauzon, Que. The two sections arrived in the St. Lawrence River eventually, after some trouble, one section being placed at Sorel, and the other at Coteau Landing, Que., and we were advised that the ship had been retransferred to the Northern Steamship Co. The last information we were able to obtain as to her movements was on May 10, when we were advised that the stern section had been moved from Coteau Landing to Montreal, pending the receipt of instructions from the Northern Steamship Co.'s directors as to whether she was to be sold as she was, or the two sections joined together again.

Since the foregoing was put in type, we have been advised that the North Land is trading between Canada and France, and that it is believed there is not much possibility of her returning to the Great Lakes.

Manitoba, Saskatchewan and Alberta.

Work on the Red River was commenced about the end of July, the immediate work undertaken being deepening around the wharves within the Winnipeg city limits. This work has been under-

taken at the request of the Winnipeg and St. Boniface Harbor Commissions. The work is being done by the City of Winnipeg and the St. Boniface Harbor Commission. The work is being done by the City of Winnipeg and the St. Boniface Harbor Commission.

British Columbia and Pacific Coast.

The Vancouver Harbor Commission, organized at the request of the British Columbia Government, has been authorized to purchase the s.s. Princess Sophia, which was wrecked and lost with all her passengers and crew, on Vanderbilt Reef in the Portland Canal, at the end of 1918. It is stated that the contract price is about \$1,500,000, that she will be 325 ft. long, with a speed of 17 knots, and that she will be placed in the Alaska service, for which she is to be specially built.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George was replaced in service Aug. 1, after being overhauled at Prince Rupert, subsequent to running on the rocks in Seymour Narrows during July.

In connection with the death of E. H. Benley, Manager, Union Steamship Co. of British Columbia, in an aeroplane accident, it is proposed to endow a ward for sick mariners in the local hospital, as a memorial.

During the first half of this year there were shipped from British Columbia 29,000,000 ft. of lumber, and there are orders on hand for approximately 36,000,000 ft., for South Africa, South America, Australia, New Zealand and the United Kingdom.

The Canadian Robert Dollar Co.'s s.s. M.S. Dollar sailed from Vancouver, B.C., recently, with what is stated to be the largest general cargo on one ship from the port for the Orient. The total weight of cargo was 14,000 tons, of which about 6,000 tons were lumber.

The Vancouver Harbor Commissioners have deposited with the Public Works Department at Ottawa a description of the site and plans of the Ballantyne pier, to be built on the south shore of Burrard Inlet, on a water lot east of the west boundary on Heatley Ave. produced northerly.

The C.P.R. is reported to have placed a contract with Wallace Shipyards Ltd., North Vancouver, B.C., for the construction of a steamship to replace the s.s. Princess Sophia, which was wrecked and lost with all her passengers and crew, on Vanderbilt Reef in the Portland Canal, at the end of 1918. It is stated that the contract price is about \$1,500,000, that she will be 325 ft. long, with a speed of 17 knots, and that she will be placed in the Alaska service, for which she is to be specially built.

D. C. Coleman, Vice President, Western Lines, C.P.R., is reported to have stated in Vancouver recently that J. W. Troup, Manager, British Columbia Coast Service, C.P.R., Victoria, would make an announcement shortly regarding the building of a steamship to replace the s.s. Princess Sophia, which was lost in the Portland Canal at the end of 1918. If it is decided to build a steamship, she will be larger than the Princess Sophia, suitable for Alaska service. Tenders have been received for the building, two from British Columbia builders, and a third was expected, when a decision would be arrived at.

The Lord Beatty Ltd. has been incorporated under the New Brunswick Companies Act, with \$25,000 authorized capital and office at St. John, to purchase the s.s. Lord Beatty and to carry on a general towing, salving and wrecking business. The incorporators are: T. Nagle, C. M. Kernson, and T. A. Linton, St. John, N.B.

New Steamship for Toronto-Niagara River Line.

J. W. Norcross, President, Canada Steamship Lines Ltd. during an interview gave out the following statement in Toronto Aug. 25:—"The plans and construction of the new steamship for the Toronto-Niagara-River line are completed, and the steel has been ordered. It is the company's intention to have the construction commenced at once and the ship ready for the summer season of 1921. This is to be the first of the new series of passenger ships that the Canada Steamship Lines contemplates building, and will embody all the best points of modern construction. The principal dimensions will be 410 ft. long, by a width of 70 ft. over the guards, and her carrying capacity will be 4,000 persons, which is twice the present carrying capacity of the s.s. Cayuga, on the same run. The entire construction of the ship will be of steel, and no wood will be used, the interior finish being of pressed steel, and the decorations after the most improved style. There will be four decks, and also a very large restaurant, and special attention will be paid to the allotment of dancing space, so that ample room will be provided for all. There will be a spacious moving picture theatre, and continuous entertainments will be put on. There will also be a children's playground, with competent attendants in charge, which will leave the mothers free from the responsibility of watching their little ones. The ship will be propelled by geared turbine engines of the latest design, and will develop a shaft horsepower of over 6,000, enabling the development of a speed of 22 knots an hour. Special attention has been paid to all details and the arrangements for the accommodation of the public. The deck space, designs and construction will be not only superior to, but far in advance of, anything that is now afloat, or under construction, for passenger carrying on fresh water."

The plans have been prepared by A. Angstrom, naval architect, Toronto. No announcement has been made as to where the ship will be built, but it will almost certainly be by one of the shipbuilding companies which are being merged into the British Empire Steel Corporation, probably the Collingwood Shipbuilding Co., Collingwood, Ont. On account of Welland Canal limitations, the ship, if built in Collingwood, would have to be brought through the canal in sections, probably on their sides, and even that might not be practicable, and it is more likely that the fabricating will be done in Collingwood and the assembling, etc., in Toronto.

North American Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$750,000 authorized capital and office at Toronto, to operate freight and passenger steamships, and to carry on general navigation, transportation and other allied businesses. The incorporators are: M. L. Gordon, J. S. Duggan, J. W. Bicknell, T. S. H. Giles and M. H. MacGregor, Toronto.

European Steamship Agencies (Toronto) Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Toronto, to carry on business as insurance brokers, steamship and transportation agents, etc. The provisional directors are H. and R. Goad, and S. and R. Peiman.

Wreck Commissioner's Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following marine casualties:—

Margaret Hackett-Brookdale Collision.

Held at Montreal, July 30, before Capt. L. A. Denier, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and C. J. Stuart, as nautical assessors, into the cause of the collision of the George Hall Coal Co.'s tug Margaret Hackett, and barge Gladys H. in tow, with the Canada Steamship Lines' barge Brookdale, in tow of the same company's s.s. Maplehurst, near buoy 25, Lake St. Peter, July 16. The court found that the mate, O. Portelance, of the tug Margaret Hackett, was solely responsible for the casualty, and though he is not required to carry a certificate as mate of a tug, he was judged unfit to hold the certificate he has, as master of a tug, and it was cancelled. The master of the tug Margaret Hackett, W. Allison, was exonerated from all blame, but he was criticized for sailing the tug until she sank in deep water, instead of selecting a shallow spot. The barges Brookdale and Gladys H. were exonerated from blame, but the officers were advised to keep a better lookout in future. The s.s. Maplehurst was also exonerated, but the master, K. LaRush, was found in default for not carrying properly constructed lights in accordance with article 3 of the International Rules of the Road, and was severely reprimanded. He was also censured for not making more enquiries into the condition of his barge and the tug Margaret Hackett, as had there been any loss of life, the court would have held him criminally responsible. The pilot, J. S. Raymond, was cautioned that it is essential for him, and all pilots, to ascertain for themselves the condition of the navigational lights of ships they are piloting, also of the tow, if any. The mate of the s.s. Maplehurst was cautioned to keep his watch on the bridge, and to bear in mind constantly his responsibilities as an officer. The court recommended to all concerned, a stricter supervision and examination of aids to navigation and their equipment.

Appeal re Stranding and Loss of s.s. Chelston.

In connection with the stranding of the British s.s. Chelston, at St. Paul's Island, in the Gulf of St. Lawrence, Oct. 9, 1919, the master of the ship, Capt. A. M. Fotheringham appealed, in the Admiralty Division of the English High Court, against the decision of the Dominion Wreck Commissioner, concurred in by the two nautical assessors, by which he was held to have erred gravely in judgment, and his certificate suspended for three months. The judgment on the appeal stated that questions of principle were raised which might have far reaching consequences, and in particular that there was a challenge of the powers of the Canadian Parliament to make amendments of the Merchants Shipping Act, as done by the Canada Shipping Act of 1908, so far as they affect certificates of British masters. There was also the question as to whether the rules made by the Dominion Marine Department, which governed procedure in Canada under the Merchants Shipping Act, provided sufficiently for the protection of mariners implicated by charges. The most substantial ground of the appeal was that the master had no notice of the charges on which his certificate was dealt with.

There was a further point that the Canadian procedure did not satisfy the requirements of the British law, and was ineffective to sustain a finding that prejudiced a master's certificate. In the court's view the rules made by the Lord Chancellor were rules governing procedure in British wreck commissioners' courts, and the rights of British shipmasters in Canadian courts were to be ascertained by considering whether the provisions of the Canadian Parliament diminished in any way the safeguards of the masters' interests, which were afforded by British legislation. In the court's view, they did not, but on the contrary Canadian legislation amply protected the rights of British shipmasters. The case was merely the efficacy of the procedure of the Canadian statutes to give the protection. Sec. 36 of the Canada Shipping Amendment Act 1908 provides that a certificate shall not be cancelled or suspended unless the holder of such certificate has an opportunity of making his defence. No charge was presented against the master, and the first notice he had of such a charge was the finding of the court that he was guilty. Therefore the appeal must be allowed, and the master's certificate restored, free from any suspension.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

New Brunswick.—The fixed red light on the north side of the gully at South Tracadie, in the Gulf of St. Lawrence, will be discontinued about Sept. 1.

The Kouchibouguac bar range lights in Kouchibouguac Bay, Northumberland Strait, have been changed in position, as follows: The front range light on the east side of south beach has been moved about 212 ft. north of its old position, and the back light about 32 ft. north of its old position and 365 ft. from the front light.

Nova Scotia.—The Public Works Department has dredged a channel 750 x 35 ft. with a least depth of 6 ft., from the main channel to the fishing boat anchorage in Fourchu Harbor, Cape Breton Island.

During the past season the channel in the East River, from Chambers point to New Glasgow, was dredged by the Public Works Department, to a least depth of 10 ft. The dredged channel, following the course of the river, is 38 ft. wide, with a turning basin in front of the government wharf at New Glasgow, 400 x 100 ft.

The light ship maintained on Lurcher shoal, off Yarmouth, will, without further notice, be removed from her station, about Sept. 15, to undergo repairs, pending which, her station will be marked by a gas buoy, painted red and showing an occulting white light. The ship will be off her station about four weeks, and further notice will be given when repairs have been completed and the ship resumed in position.

Back range light has been established at Grand Etang, on the west coast of Cape Breton Island, on the breakwater, 367 ft. from the existing light on the outer end of the breakwater. The light, which is fixed red, is shown from a locomotive headlight lantern at an elevation of 34 ft., with a visibility of 6 miles, and is mounted on a white pole with a white shed at base, 30 ft. high.

Quebec.—The Public Works Department has dredged the basin on the east side of the Government wharf at Mur-

ray Bay, to a depth of 15 ft., 100 ft. wide in line with the front face of the wharf, and extended shoreward 340 ft., 72 ft. wide at the inner end.

Ontario.—A red wooden spar buoy has been established on the north side of the St. Marys River channel at Sault Ste. Marie, about 1,100 ft. eastward of government wharf, in a depth of 21 ft.

The fog bell and auxiliary hand fog horn, about 300 ft. west from the east extreme of Daviaux Island, on the south side of Michipicoten Island, Lake Superior, will be discontinued without further notice.

The red gas buoy 64F, in 18 ft. of water, one mile east of South Lancaster, in Lake St. Francis, River St. Lawrence, will be discontinued without further notice.

L'Original wharf having been destroyed by fire, the fixed white electric light, on a shelf on the gable end of a brown wooden freight shed, on the outer end of the wharf, will be discontinued until further notice.

A red wooden spar buoy has been established on edge of shoal, about 55 ft. east from east side of government wharf, Brockville.

Newfoundland.—The diaphone fog alarm, which is operated by air, compressed by an oil engine, and which gives three blasts of 1½ sec. every 90 sec., at Bonavista Cape, Bonavista Bay, on the east coast, has been moved to the mainland, on the south side of the lighthouse.

On the summit of Little Denier in Bonavista Bay, an occulting white light has been replaced by a flashing white light, giving a flash of 3 seconds every 30 seconds.

A flashing white acetylene gas light, showing a flash of 0.3 sec. duration every 3 seconds, has been established about 130 yd. from the northwest end of Eagle Island, Bay of Islands. The light is at an elevation of 109 ft. and consists of a white structure of open frame work surmounted by a red lantern.

United States.—A steel conical buoy, 17A, showing an occulting white light, has been established in 3 fathoms, off Whisky Island shoal, River St. Lawrence.

Vancouver Drydock.—In reference to the Vancouver press dispatch of July 21, referred to in Canadian Railway and Marine World for August, stating that the contract between the Dominion Government and J. Coughlan & Sons, for building a drydock on Burrard Inlet had been signed, and that work would be started in 60 days thereafter, we were officially advised July 27 that the agreement had not been executed, as the contractors were re-arranging the layout of plant and site, which would require the approval of new plans and specifications.

Cuban Port Congestion.—Major H. A. Chisholm, Canadian Government Trade Commissioner at Havana, Cuba, wrote recently that so serious has Cuban port congestion become that a commission of 17 U.S. shipping men was due to arrive in Havana within a few days to go thoroughly into the problems of the port and make recommendations for the solution of the difficulties. Ships have sometimes been held up in Havana harbor for two or three months at a time.

U. S. Steamship Rates.—The Interstate Commerce Commission has authorized steamship lines, subject to its jurisdiction, to increase their rates to the same extent as railways have to be authorized to do between the same points or in the same territory.

York, N.Y., is manufacturing an improv-

Vapor Car Heating Co. of Canada, 61
Dalhousie St., Montreal, has issued a cat-
logue, 22, showing of its car heating and
ventilating apparatus, describing and il-
lustrating the vapor system of car heat-
ing and other devices, including cab heat-
ing systems, steam and hot water car
heating apparatus, etc., are manufac-
tured formerly by Chicago Car Heating Co.

October, 1920

Snow Fighting Equipment.

By W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Railway.

The first part of this paper was published in Canadian Railway and Marine World for September.

Spreader Ploughs.—Figs. 17, 18 and 19 show what is commonly known as a snow spreader or dozer. The front of the car is V-shaped. A low V-shaped plough, with drop wings, is attached to the front. When these wings are dropped into working position they form a continuation of the plough mold plates. The simplest form of spreader consists of a flat car with wings attached to each side, the wings being operated from the floor of the car by means of levers. The

still further. This type of plough is frequently used for cleaning up yards. Some roads utilize their ballast spreaders for this purpose.

Machine Ploughs.—On roads which have to fight deep drifts, snow slides, or other conditions beyond the capacity of push ploughs, the rotary machine plough is used, and to date is the most effective instrument that has been developed for the purpose. These ploughs can work their way through deep cuts and slides where it would be impossible for any type of push plough to lift the snow and, in addition, can throw the snow

revolved without throwing any snow.

The next development was known as the Marshall plough, a full size working model of which was tried either on the Chicago, Milwaukee & St. Paul Rd. or the Chicago & North Western Rd., in the northwestern part of Iowa, in the latter part of the 70's. The wheel, which revolved on a shaft at right angles to the center line of the track, was a large wooden disc on which were fastened a number of radiating blades. This plough was also a failure.

Another attempt to construct a successful machine plough was known as

Fig. 31. Canadian Pacific Railway Rotary Snow Plough, built in 1911.

illustrations show a house car spreader. The drop wings are raised and lowered by air cylinders. The side wings are supported by jib cranes, hinged to the side of the car, and are held in working position by means of heavy bar braces. On some ploughs these braces are moved into working position by means of air cylinders. Some types of spreaders are equipped with drag wings hinged to the back corners, as shown in fig. 17. This type of spreader is used by some roads to widen cuts after a plain push plough has passed. When widening cuts these wings are in such position that they serve as snowbank cutters, and snow is carried in toward the center of the track, from which it can be thrown by either a wedge plough or a rotary. When equipped with drag wings these spreaders are often called cut wideners. The large side wings when extended to their full width have a total spread of approximately 30 ft. The snow is first cut by the V-shaped plough and, after it is thrown or pushed to one side, the long wings push it out

clear of the track. If the snow is much higher than the top of the casing it is only necessary to loosen it and throw it down in front of the plough in order to have it picked up and thrown clear of the track.

A rotary plough, invented in 1869 by J. W. Elliott, consisted of a wheel having four flat arms and which was supported on a horizontal shaft, rotating in line with the track. The wheel was enclosed in a casing, the front of which was shaped to collect the snow and the rear of which was shaped cylindrically.

The first machine plough built was known as the Hawley plough, and was exhibited at the Philadelphia Centennial Exhibition in 1876. The plough was equipped with a large vertical conveyor screw supported in a rectangular casing, the front of which was shaped to collect the snow. This plough was tested on what was then the Teeswater Division, Toronto, Grey & Bruce Ry., now a part of the C.P.R. This plough was an absolute failure, as the elevator screw

the Blake machine snow plough, and it embodied a rotary principle. It was tried on the Winona & St. Peter Division, Chicago & North Western Rd., in the early 80's, and was also an absolute failure.

A later attempt to develop a machine plough resulted in what was known as the Kryger steam snow shovel. In some ways this plough looked very much like a modern ditching machine. Buckets were placed on an endless conveyor and these buckets were supposed to pick up the snow and convey it up and back to a point where it could be automatically thrown clear of the track by a revolving wheel. This machine was built at the Minneapolis, St. Paul and Sault Ste. Marie Ry. Minneapolis shop, in 1889 or 1890, but was never tried in the snow.

The Cox machine snow plough, which was never built, was illustrated in several of the U.S. railway journals in the early 90's, and unsuccessful efforts were made to organize a company to build it.

Mr. Elliott was the original inventor of the rotary principle. His invention

head designed by the Leslie Brothers, who designed a knife which was 27 in. in front of the roller wheel, by 21 in. across the Leslie Brothers built the first model resembling the full construction. The two wheels were mounted on a heavy shaft in which revolved a small wheel carrying the knife wheel. The fan and cutting wheels were provided in op-

position could be thrown to either side of the track and that a flanger was necessary to prevent derailing in soft snow and ice and to leave a satisfactory trail after passing.

To overcome these objections the Leslie Brothers developed a wheel with manually reversible knives which could be changed in position to enable them

part of the latter were dropped snow-brakes of about 2 in. across the rail head was shaped like a plow or two. The part of the latter above the rail was shaped like the blade in a wood plane, and in service position came within $\frac{1}{2}$ in. of the top of the rail head. Two flangers, shaped very much like the mould boards of an ordinary farm

Fig. 17. Snow Spreader or Plow.

Fig. 18. Snow Spreader.

Fig. 19. Snow Spreader.

position, and could be mounted in any system. During the winter of 1882-83, the C. O. R. was used at the C. & N. W. Ry. Parkdale, Ont. This preliminary trial, in which snow and ice were thrown over 300 ft., demonstrated the practicability of the machine with a revolving wheel. It, however, also indicated that the plough should be constructed in such

in all in either direction. This was accomplished by having a central portion of the casing through which snow could be thrown to either side of the track. In addition they designed an ice cutter, and a flanger, which were applied to the front truck of the plough. The ice cutters, one for each rail, were fastened to the front of the truck. The

Fig. 20. Jull Cutting Wheel for Rotary Snow Plough.

cutters were fastened to the front of the truck. These picked up the ice removed by the roller wheel and threw it over the sides of the track. The ice cutters and flangers could be either raised or lowered.

The plough was put in service on the Chicago & North Western Ry. during the winter of 1883-84.

It is interesting to note that the engines of this plough were equipped with Walschaert valve gear. One difficulty, however, was experienced. The friction caused by the snow passing between the roller wheel and the fan wheel required more power than that required to cut

Fig. 21. Robert Rotary Fan Wheel for Rotary Snow Plough.

and throw away the snow. The principle of opposite revolving wheels was then abandoned and the Leslie Brothers designed a single fan wheel with adjustable cutting edges. These cutting knives were attached directly to the wheel and automatically reversed their position as

the direction of rotation was changed. The Cooke Locomotive Works rebuilt the plough, embodying these improvements,

had been able to proceed. J. S. Leslie personally operated the plough during the trial. The operation of the "rotary"

real shops, applying a fan wheel which had been still further improved by the Leslie Brothers. This wheel is shown in fig. 25. Fig. 26 shows a plough with the perfected Leslie wheel. The ice cutter and flanger can be seen very well in this illustration.

In 1889, Orange Jull devised a centrifugal excavator which was first put in service on the Union Pacific Rd. during the winter of the same year. Fig. 27 shows a plough of this type. This excavator was intended to remove snow by means of a cone shaped screw conveyor. The screw was built up of plate and supported on a shaft. It was not only set diagonally across the track, but inclined so that the nose pointed down toward the right hand rail. The shaft was supported by two bearings, the front one being located in the bottom right hand corner of the hood; the back one in the left hand corner. The screw was made up of four spiral blades of $\frac{1}{2}$ in. steel plate. The action of the excavator was similar to that of an auger, the snow being carried back and up through an opening in the top of the hood. The screw was revolved at from 250 to 300

Fig. 22. Leslie Bros' Model Rotary Snow Plough, tried in C.P.R. Parkdale yard, Toronto, in 1884-85.

Fig. 23. Leslie Bros' Rotary Snow Plough, 1886.

Fig. 24. Improved Leslie Bros' Rotary Snow Plough, as rebuilt by Cooke Locomotive Works.

fig. 24, and during the winter of 1886-87, it was put into service on the Union Pacific Rd., doing particularly good work in opening up one 70-mile branch which had been blocked for some time and through which no ploughs of other types

was so successful that the railway company not only purchased it, but three others in addition.

In Canada, in 1888, the C.P.R., through the Polson Iron Works Co., of Toronto, built eight of these ploughs in its Mont-

Fig. 25. Improved Fan Type Wheel, for Rotary Snow Plough.

revolutions per minute. The Jull plough was unsuccessful. The screw conveyor filled up solid with snow and ice; the spiral cutter was easily damaged by rocks and ice; the screw also had a tendency to raise the front of the plough, resulting in derailment.

During 1889, another snow plough, called the Cyclone, was brought out and put into service on the Central Pacific Rd., now a part of the Southern Pacific System. This plough, like the Jull excavator, had a revolving auger, with a fan wheel placed behind it to remove the snow. The fan wheel and auger were mounted on the same shaft, and driven by two powerful engines. This plough was also unsuccessful.

Although there has been considerable development, the general arrangement of the modern rotary is very similar to that of the improved Leslie ploughs. As development progressed, the ploughs became heavier and were made more powerful. The size of the cutting wheels has increased to such an extent that on the heaviest and most modern ploughs the knives will cut through small trees and successfully open up snow slides containing a very large proportion of dirt, rock and gravel.

The first rotary ploughs with the improved Leslie wheel were equipped with

4 ft. 2 in. diameter by 21 in. stroke 2-cyl. engine. It was supplied by a centrifugal type boiler, having 4,200 sq. ft. of heating surface and carrying 180

other early rotaries, were equipped with a wheel of the fan type, illustrated in fig. 26. The back of this wheel consisted of steel plate, to which the fan blades,

was in operation the revolving knives cut the snow and delivered it into the space between the partitions. The snow was then carried around the casing until the top opening was reached, through which it was thrown in a straight line by centrifugal force. Fig. 28 shows how these cutting knives were supported and how they assumed a cutting position, no matter in which direction the wheel revolved. In light and dry snow these wheels were satisfactory, but in heavy work their construction proved inadequate. In wet and heavy snow the partitions and cutting plates buckled and the supporting rings became distorted. This caused the knives to fail and the wheel to jam in the casing. These troubles were overcome by heavier construction.

This fan type wheel is still in service on very many railways. It is the opinion of most users, an opinion endorsed by J. S. Leslie, that a well constructed, heavily built, fan type wheel is the most efficient snow remover that has yet been devised. On these ploughs the boiler, the engines, the main shaft and gears were supported on an underframe the sides of which were steel channels. At the front

Fig. 28. Leslie Bros. Rotary Snow Plough, with Ice Cutters and Flangers.

Fig. 27. Jull Centrifugal Snow Excavator.

Fig. 26. Boiler and Machine Arrangement of Rotary Snow Plough, built by American Locomotive Company.

the cutting wheel was supported by an 8 1/4 in. diameter shaft passed to the engine. The shaft was supported in a main bearing 34 in. long. These snow ploughs, as well as many

or partitions, were secured. The fronts of the partitions were supported by heavy inner and outer rings. The reversible cutters were supported by trunnions riveted to these rings. When the plough

Fig. 29. Leslie Bros. Scoop Type Wheel, for Rotary Snow Plough.

these side members were tied together by a very large casting which formed the bed for the main wheel shaft and the engine shaft bearings. Back of this casting two sills extended to the rear end sill. A wooden cab protected the engines and boiler. The plough, without the tender, weighed 125,000 lb.

The Leslie Brothers also developed the scoop type of wheel shown in fig. 29. Mr. J. S. Leslie states that this wheel was developed to handle the soft, fluffy, wet snow found on the Pacific slope near the citrus belt. Such snow had a tendency to adhere to and clog the partitions of the fan type wheel. Reference to the figure shows that the wheel is composed of 10 cone shaped radially placed scoops, the backs of which are fastened to a steel plate. The surface of these scoops is smooth to prevent snow from adhering. Each scoop is open its entire length on the front side. A cutting knife is hinged on each side of the opening. These knives adjust themselves automatically into cutting position. The knives on the adjacent edges of each scoop are connected by links so that when one knife is cutting snow the other knife is depressed to afford the necessary clearance.

With the exception of special ploughs, the general construction of the modern

rotary has not changed greatly. The cutting wheels have been increased to 11 ft. in diameter; the capacity of the boiler and power of the engines have been increased; the original cast iron beveled gear drive has been changed, and two bevel pinions of steel with cut teeth and supported on independent engine

shafts are used. The cutting knives have been made heavier and of cast steel. The strength of the surrounding casing has been increased at the cutting edges and cut wideners have been added. Fig. 30 shows a plough of this type built by the American Locomotive Co. Fig. 31 shows a plough built for the C.P.R. in 1911.

This figure shows hinged cut wideners in working position. When not in use these cut wideners are folded back flat against the sides of the casing, the supporting rods being removed.

This article will be continued in Canadian Railway and Marine World's next issue.

Increases Authorized in Railway Freight and Passenger Rates.

Full particulars of the two applications made to the Board of Railway Commissioners by the steam railway companies for authority to advance freight and passenger rates, etc., were given in Canadian Railway and Marine World for August, pp. 434, and September, pp. 491.

The Chief Commissioner's Judgment.

The Chief Commissioner, Board of Railway Commissioners, Hon. F. B. Carvell, K.C., gave the following judgment on Sept. 6. Re application of the Railway Association of Canada, on behalf of the railway companies members thereof, and of all other railway companies within the Board's jurisdiction, for authority to make a general advance of 30% in the tolls charged for the carrying of freight by the said companies. This is an application made by the Railway Association of Canada on behalf of all the railways under the Board's jurisdiction, and consisted, first of a general application for a 30% increase in all railway freight rates. Before the hearing, and as a result of the decision of what is known as the Chicago Wage Award, by which substantial increases were given to all railway employees in the United States, dating back to May 1 last, a supplementary application was made asking for a further increase of 10% in all freight rates; 20% in passenger fares; 50% in sleeping and parlor car rates; 40% in milk rates, and 20% in excess baggage rates.

At the hearing representatives of the different railways filed statements, showing, at great length, their respective financial conditions for some years past; all showing an increase of business, with a very substantial increase in operating ratio, which in other words, means the number of cents which a railway must expend in operating its road in order to earn one dollar, which was alleged by counsel for the Railway Association, as the surest test of the financial condition of any railway, and, unfortunately, with the exception of the Canadian Pacific Ry., which was unsatisfactory, practically all the other roads showed that it was costing as much, or more, to operate them than they were receiving; and the term "operating ratio" does not take into account anything in the way of fixed charges or dividends. The C.P.R. statement shows the following for the past four calendar years:

Year.	Operating	Net earnings.	Operating ratio.
1916	\$50,476,499	63.87
1917	46,546,018	70.01
1918	54,502,387	78.16
1919	32,233,036	81.39

while for the six months ended June 30, 1920, its operating ratio had jumped to 87.58%; and in the report for July just filed with the Board, excluding taxes and including increased wages, it had increased to 91.43%.

The operating ratio of the Grand Trunk Ry. for the year ended Dec. 31, 1919, was 87.43%, and for the 6 months ended June 30, 1920, was 99.97%. For the Canadian Northern Ry. System, not including the Intercolonial or National Transcontinental Ry.s., the operating ratio for the year ended Dec. 31, 1919, was 112.08%, and

for the 12 months ended May 31, 1920, was 117.61%. According to estimates filed with the Board, the result for 1920, if increased wages were granted, as heretofore referred to, and no increase in the traffic rates, the operating ratio would be 134.23%. If the wage increase were granted as from May 1, 1920, and the full rate increases from Sept. 1, 1920, the operating ratio would be 119.59%, and the estimated result of operations for 12 months on the 1920 basis, with both wage and rate increases granted, would still leave an operating ratio of 105.01%.

All the counsel representing the opposing interests based their case upon the financial statement of the C.P.R., and practically all the evidence, outside of the financial statements above referred to, dealt only with that railway, and therefore, in arriving at a judgment, I am forced to refer almost exclusively to the condition of the C.P.R. in order to arrive at proper conclusions. Mr. Moule, Assistant Comptroller, C.P.R., stated that the company's reserves could be placed at \$317,000,000, but of this amount \$160,000,000 would only be available after the lands were sold. He also stated that at present the "liquid assets" consisted of \$53,000,000 in cash and accounts collectable, amounting to about \$16,000,000, making a total of \$69,000,000, of which about \$37,000,000 was represented by Imperial and Dominion Government securities. As against this, he stated that there were accounts which had to be paid, amounting to \$27,000,000, and also alleged that within four years \$52,000,000 of actual cash must be provided for the retirement of notes maturing in Mar., 1924, although by that date the cash fund should be augmented to a considerable extent by the receipts from land sales, which are specially allocated to meet these obligations.

Notwithstanding these facts, it was contended by G. R. Geary, counsel for the City of Toronto, and D'Arcy Scott, for the Saskatchewan Government and the National Dairy Council, that no matter what the loss might be in operation, any deficit required for the payment of dividends should be taken from the reserves, so long as the same lasted, instead of increasing the rates as applied for.

Mr. McMaster, counsel for the Canadian Manufacturers' Association, as I understand him, contended that the rates should be so adjusted that the C.P.R. would be able to pay its dividends without drawing upon its reserves, but nothing further. Mr. Symington, counsel for the Province of Manitoba, was not quite so general, and Mr. Coyne, representing the amalgamated boards of trade of the three prairie provinces, would draw upon the reserves to some extent if necessary for the payment of dividends. I am unable to agree with any of these contentions, and much less with that of Mr. Geary, because, should his doctrine be followed to its logical conclusion, in a very short time the cash reserves would be dissipated, and it would only be a question of time when this company

would find itself in the position of the Grand Trunk and Canadian Northern systems. If the C.P.R. Co. has, for many years past, kept an outstanding position among transportation companies of the world, it is because, through wise business management, it has been able to place itself in such a financial position that the financial world has faith in the institution, and perhaps none of us realize the value which this financial status has been to Canada in the outside world during recent years, the most outstanding case being the loan of \$40,000,000 worth of debenture stock to the Imperial Government, which was actually hypothecated in the United States for the purchase of munitions during the war.

But, apart altogether from this phase of the question, we have in the actual conditions in Canada, that about which there can be no speculation whatever. It is known, from its financial statement, that the C.P.R. has actually put into the road out of reserves, proceeds of land sales, etc., \$130,000,000, which has probably been expended more or less in every province in Canada through which the road runs, in bettering conditions and fitting it to that extent to better serve the public as a common carrier; and, according to the evidence, during the present fiscal year, it has already expended more than \$8,000,000 out of reserve for the construction of branch lines in Western Canada. Under the present financial conditions, all the counsel above referred to, I think, would admit that none of these branch lines would be possible during the present year if the C.P.R. Co. did not have the reserve from which to draw for this purpose, but, even supposing it was able to sell securities to the public, it would mean an increase of its fixed charges or dividends which would have to be met out of earnings, and every addition to capital expenditure would be a further demand for increased rates; and therefore, considering the question from every standpoint, I consider it a national necessity that the C.P.R. at least be kept in a healthy financial condition, with the hope that, as a result, the other great railway system may be benefited in a corresponding degree. The financial statement of the C.P.R. for the year ended Dec. 31, 1919, showed a surplus of \$844,249. It was contended, and was not denied, that should it pay the increases to its employees, based upon the Chicago award, without receiving any increase in rates, the 1920 balance sheet would show a deficit of many millions of dollars. The above mentioned award, if adopted by the C.P.R., would require an additional wage expenditure before Dec. 31 next, of \$14,822,300, and for the next full year nearly \$22,000,000, and, if adopted by the other roads, would mean the same proportion of increases.

It was strongly contended by many interests, that the Board, in making its decision, should take into consideration only the financial requirements of the C.P.R. Co., and whatever deficit there should be in the operation of the Canadian National Ry.s. System should be

This shows an estimated surplus for the next fiscal year of \$1,000,000, which is probably more than the company should be entitled to, and which is probably a little less than the actual surplus would be for the year's operation, as possibly the increase of the maintenance of way labor might not be realized. As against this, however, for reasons hereinafter stated, the gross revenue would not be as great as I have estimated.

This brings me to the question, what rate of increase, if any, should be granted? Practically the whole argument of Messrs. Symington and Coyne, outside of the general statement as to the payment of the dividends herein referred to, was based on the allegation that the rates in western Canada were greater than those in eastern Canada. This has been a burning question with the people of the west at every rate hearing since the organization of this Board, and as the matter was so thoroughly discussed in the Western Rates Case, 17 Can. Railway Cases, 123, and decisions arrived at, I feel it unnecessary to enter into any lengthy analysis of figures to show to what extent, if any, this claim is justified. The eastern rates apply to the portion of Canada east of Port Arthur, including Port Arthur eastbound, and the western rates to the territory west of Lake Superior, including Port Arthur westbound. It was admitted by all parties at the hearing that the operating ratio in western Canada was somewhat less than in the east; that the tonnage per train was greater in the west than in the east, and that about 55% of the total traffic of the C.P.R. system was in eastern Canada and 45% in western Canada.

In order to satisfy myself of the facts, I have investigated the tariffs, both east and west, applicable to the more important traffic movements. I find that on building brick, sand, gravel and crushed stone, also on green vegetables to and from distributing points, the carload rates are lower in the west than in the east; that on rough or partly dressed building stone the western rates are the lower for the shorter hauls, and slightly the higher for the longer, with parity in some of the mileage blocks; and that on cheese, eggs and fresh meat the carload tariff to and from distributing points is lower for distances to between 150 and 200 miles and higher for the longer movements than in the east.

On lumber, while the shorter haul rates are lower than, or the same as, those in the east, and higher for the longer distances under the mileage tariff, the specific point to point tariff, which really governs the bulk of this traffic, is considerably higher in the west than for similar distances in eastern Canada. In dealing with a station to station tariff, however, a mere comparison of similar distances is not always conclusive, since a density of movement on the one side may not be counterbalanced on the other.

As to livestock; while there is little difference between the west and east rates in the mileage tariffs, the point to point western tariff is in general the higher, taking movements to Winnipeg and Montreal as illustrative.

As regards agricultural implements shipped in carload lots from distributing points; up to 100 miles the western rates are lower than the eastern for some distances, and are the same for others, but above 100 miles they are higher—considerably so—for the long hauls. The carload mixing privilege is, however, more liberal in the west than in the east.

When we come to general merchandise, or what is referred to as class freight, I find that the western rates are considerably greater than the eastern, whether they be those of the standard maximum mileage tariffs or those of the special tariffs from distributing points.

It is somewhat difficult to form a comparison of the grain rates between the two divisions, because practically all the grain rates in the west are based upon Fort William or Port Arthur, and we have no such distances in the east as we have in the west, but, generally speaking, the following table affords an indication, taking Windsor, Ont., as the starting point producing the longest eastern hauls of Ontario grown grain:—

Western to Montreal	Miles	Rate
Brandon to Port William	1,100	1.10c
Windsor to Lake Superior	600	.85c
Winnipeg to Port William	800	.95c
Winnipeg to St. John, N.B.	1,033	.96c
Hatton, Sask. to Port William	1,040	.98c

Allowing for the undoubted fact that a very large proportion of the traffic both east and west is on the commodity basis, I am still forced to the conclusion that the rates in western Canada average considerably greater than in the east, possibly around 15 or 18%. In coming to this conclusion I am stating nothing new, as this fact has always been recognized, and particularly by Sir Henry Drayton, the then Chief Commissioner, in the Eastern Rates Case, in re Eastern Tolls 22 Can. Ry. Cases, at page 41, where the following statement appears:—

"While, as has been set out at greater length in the Western Rates Case, differences of condition do exist between eastern and western Canada, and while western freight rates have already materially been reduced, the general schedule there obtaining is still higher, notwithstanding the fact that certain western rates that may be instanced are lower. There is no doubt but what the act requires and the general public interest of the country, as a whole, demands, that, if practicable, eastern rates should be advanced so that the different schedules may more nearly approach a parity."

• This principle should be followed. Giving weight to the conditions set out in re Western Tolls, as affecting the relative levels of tolls east and west of Fort William, and also bearing in mind changes in conditions which have taken place, I am of the opinion that it is justifiable to allow a reasonably less percentage of increase on freight tolls west of Fort William than east thereof. Consequently, I have concluded that an increase in rates should be granted along the following lines, with the exception of the items hereinafter specially referred to.

Until Dec. 31, 1920, I would give a general increase of 40% in eastern freight rates, and 35% in western freight rates, with 20% both east and west in passenger fares, which, however, should not exceed 4c. a mile, 50% in sleeping and parlor car rates and 20% on excess baggage.

Commencing Jan. 1, 1921, and until there is another revision of rates, I would reduce these percentages on freight to 15% in eastern territory and to 30% in western territory, with 10% reduction in passenger fares up to July 1, 1921, when passenger rates should come back to the basis in effect prior to the coming into force of this judgment; but continuing the full increases in parlor and sleeping car rates and excess baggage. It will of course be understood that the percentages of increases in the rates east and west of Port Arthur herein granted will, in the case of through rates between the east and the west, excepting transcontinental commodity rates, apply to the east and west factors thereof respectively.

This will, in my opinion, very nearly give the C.P.R. an even balance sheet at the end of the present fiscal year, and for the year 1921, according to my estimate, should give it a reasonable surplus; but it may still leave Canadian National Ry. System with an operating deficit.

At the hearing I was very much impressed with the argument presented by those opposing any increase on crushed stone, sand and gravel, as, from the evidence adduced, and which was not contradicted by the railway companies, they must be making a fairly substantial profit in the transportation of these commodities; but I am arriving at this conclusion, to a very great extent, by the public necessities of Canada at the present time. Perhaps, next to the railways, nothing is more urgently required than the improvement of our highways, and any increase in the rates on the materials entering into their construction must of necessity defer this much needed improvement; in fact, it was stated by Mr. McLean, of the Ontario Public Works Department, that they were now establishing in many parts of that province crushing plants at local centers; as the rates were already greater than the traffic would bear, and therefore any increased rate would not only deprive the public of a real necessity, but would probably reduce the business and consequently the profits of the railways, therefore I would give no increases in the rates on these three commodities.

Owing to the unprecedented cost of coal today and the likelihood of the same continuing for some time to come, I am not inclined to grant the above general increases in this commodity. The order in council, no. 1863, gave the following increases:—

In rates 0 to 49c a ton:	Increase, 10c.
In rates 50 to 99c a ton:	Increase, 20c.
In rates 100 to 149c a ton:	Increase, 30c.
In rates 150 to 199c a ton:	Increase, 40c.
In rates 200 to 299c a ton:	Increase, 40c.
In rates 300 up a ton:	Increase, 50c.

This scale was that prescribed in the McAdoo order for the United States. There is no lower rate now from Black Rock to Ontario points than 80c., and the higher rates are \$1.80 to Kingston, \$2.40 to North Bay, Parry Sound and Depot Harbor, and \$3.10 to Sudbury. Based on the current rates, I would allow the following increases, viz.:—

In rates 0 to 80c a ton:	Increase, 10c.
Over 80 to 150c a ton:	Increase, 15c.
Over 150 to 200c a ton:	Increase, 20c.

In the west the minimum line haul rate is also 80c., but the hauls being much longer than in eastern Canada, the great bulk of the territory will take the maximum increase of 20c. From Lethbridge, for example, the maximum increase will operate to destinations Medicine Hat and east.

The increase in the rates on cordwood, slabs, edgings, and mill refuse, all for use exclusively as fuel, should be limited to 10%.

I would also refuse any increase in milk rates, as only a few months ago this Board, on a special application, refused any increase on this commodity.

I also think there should be no increase in the minimum class rate scale as established by order in council no. 1863, and now in force by a recent order of this Board, as well as the minimum charge per shipment.

As substantial increases were given in commutation fares by special order of this Board only a few months ago, no additional increase should be given them herein.

So far, the freight rates dealt with are those charged for line hauls. Local

with the rates were made in accordance with the carriers about 10 months ago, and when in order with the tariff for the same commodity, it is not the purpose of this judgment to increase. The same would be said of the charges for fuel and other services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies.

It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies.

Transcontinental commodity rates may be advanced correspondingly to the increases now permitted in the United States, preserving the relationship between the territorial groups of the two countries that have obtained since 1918. As under a percentage division of joint through rates each participating carrier will receive its appropriate share of the increases herein authorized, it is necessary that those railways that in joint traffic are paid an arbitrary division in a fixed amount, should receive a percentage of increase corresponding to the increase in the through rates.

As our jurisdiction for granting increases on certain lines of railway in western Canada depends entirely upon the amendment to sec. 325 of the Railway Act, 1919, which expires on July 6, 1922, the rates hereby established cannot continue beyond that date, unless Parliament, in its wisdom, sees fit to extend the provisions of that section. Therefore the rates herein provided for shall not extend beyond July 1, 1922.

E. M. Macdonald, K.C., on behalf of the Maritime section of the Canadian Manufacturers Association, and Mr. Finn on behalf of the Nova Scotia Government, urged that in any advance which might be made the proportional arbitrariness east of Montreal in existence prior to 1915, should be maintained. I fear, however, we have not sufficient information at present to justify us in attempting to deal with this question; therefore, in arriving at my decision, I have not taken this into consideration, but always reserving the right of the Maritime people to apply to the Board, and also reserving the right to render a decision on the sugar application, now before us, regardless of what the general rates may be.

At the hearing, H. G. Kelley, speaking for the Buffalo Association of Canada, stated that they had decided to pay the same rates as the rates charged to the United States employees by the Chicago and North Western Railway.

It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies. It is not the purpose of this judgment to increase the rates for the same services rendered by the railway companies.

statement, and the terrible results which would necessarily befall the people of this country as a whole under such a contingency, I have taken his statement into consideration in adjusting the rates herein. It must not be forgotten that a very large part of the increase hereby granted will be necessary to take care of this increased wage, in the case of the C.P.R. alone, amounting to nearly \$22,000,000 per year.

I realize these rates will be a substantial burden upon the people of Canada, but it was admitted by all parties at the hearing that the cost of everything entering into the operation and maintenance of railways has increased more than 100% during the past four years, while the railway companies have been granted increases in what are known as the 15% and 25% cases, amounting on an average to not more than 35%. It is entirely unreasonable that the railway companies should be expected to provide the necessary transportation services for this country unless they receive rates somewhat in proportion to the increased cost of their operation, and while the rates herein established fall below the increased cost of everything else, yet I feel they will be sufficient to enable the railways to carry on during the term to which they apply, and that the people, in the light of the actual facts, will cheerfully contribute their quota in order to keep these utilities in a position to efficiently transport the business of the country.

The Canadian Pacific, Grand Trunk and Canadian Northern Ry. Companies will be required to furnish to this Board monthly statements of their operating revenues, and, should this Board, at any time before July 1, 1922, be of the opinion that a greater or less amount of money is being paid to the railway companies than is actually necessary to enable them to maintain a reasonable degree of operating efficiency, this Board reserves to itself the right, at any time, on notice, to readjust the rates to meet the conditions then existing.

The steam railway companies subject to this Board's jurisdiction shall therefore be entitled to publish and file tariffs in accordance with the above provisions effective on or after Monday, Sept. 13, instant.

In working out the rates under this judgment, fractions will be disposed of as set out in order in council no. 1863.

The foregoing judgment was concurred in by Assistant Chief Commissioner S. J. McLean; Deputy Chief Commissioner Hon. W. B. Nantel, and Commissioners A. S. Goodeve and J. G. Rutherford, C.M.G.

The Board of Railway Commissioners' Orders.

The Board passed general order 308, Sept. 9, as follows:—Re application of the Railway Association of Canada, on behalf of the railway companies members thereof and of all other railway companies within the Board's jurisdiction, for authority to make a general advance of 30% in the tolls at present charged for the carriage of freight by the said companies; and the further application for an additional increase of 10% in all freight rates, and an increase of 20% in passenger fares, 50% in sleeping and parlor car rates, 40% in the rates on milk, and 20% in the rates for excess baggage. Upon hearing the applications at Ottawa, Aug. 10, 11, 12, 18, 19, 20 and 21, in the presence of counsel for and representatives of Canadian Pacific, Grand Trunk, Canadian Northern,

Toronto, Hamilton & Buffalo, New York Central, Essex Terminal, Windsor, and Great Northern Railways, Michigan Central Railroad, Canadian Railway Association, Canadian Freight Association, Canadian Manufacturers' Association, the Livestock Dealers' Association, Canadian Wholesale Grocers' Association, Canadian Lumbermen's Association, Retail Merchants' Association of Canada, Clay Workers' Association, Canadian Export Paper Company, Dominion Cannery Ltd., Carnation Milk Products, Ltd., Riordan Paper Co., National Dairy Council, United Farmers of Ontario, Canadian Council of Agriculture, certain commercial organizations of the Maritime Provinces, Retail Coal Dealers of Ontario, Eastern Canada Livestock Union, Crushed Stone Industries of Ontario, Western Canada Livestock Union, Canadian Construction Co., boards of trade of Winnipeg, Toronto, Montreal, and St. John, City of Toronto, Hamilton Chamber of Commerce, London Chamber of Commerce, Border Cities Chamber of Commerce, provinces of Manitoba, Saskatchewan, and New Brunswick, and Ontario Department of Public Highways, the evidence offered and what was alleged; and upon reading the written submissions filed, judgment, dated Sept. 6, 1920, was delivered by the Chief Commissioner, and concurred in by the other members of the Board who heard the application, a certified copy of the said judgment being attached hereto marked A, it is ordered that the changes in the tariffs of the companies operating steam railways subject to the board's jurisdiction, as set forth in the judgment, which is hereby made part of this order, be and they are hereby authorized.

The Board of Railway Commissioners passed general order 309, Sept. 9, as follows:—Re application of Railway Association of Canada, on behalf of railway companies, members thereof and of all other railway companies within the Board's jurisdiction, for authority to make a general advance of 30% in the tolls at present charged for carriage of freight by the said companies; and the further application for an additional increase of 10% in all freight rates and an increase of 20% in passenger fares, 50% in sleeping and parlor car rates, 40% in the rates on milk, and 20% in the rates for excess baggage. Supplements to the standard freight and passenger tariffs of the undermentioned railway companies having been filed on the basis prescribed by the Board's judgment, dated Sept. 6, and general order 308, dated Sept. 9, it is ordered that the following supplements to standard freight tariffs of maximum mileage tolls be approved; the rate scales of the said tariffs to be published in at least two consecutive weekly issues of The Canada Gazette, preceded by the following notice: "The undermentioned supplements to standard freight tariffs having been filed for the approval of the Board of Railway Commissioners for Canada, and being found by the Board to be in accordance with its judgment, dated Sept. 6, and its general order 308, dated Sept. 9, and having been approved by its general order 309, dated Sept. 9, the rate scales thereof are hereby published."

Quebec Central Ry., Supplement 1 to C.R.C. 174.
Wabash Ry., Supplement 1 to C.R.C. 996.

On Sept. 23 the Board of Railway Commissioners passed general order 311. Its recital was worded the same as that of order 309 above, the rest of the order being as follows:—Whereas standard freight tariffs or supplements thereto of the undermentioned railway companies have been filed on the basis prescribed by the Board's judgment of Sept. 6, 1920, and general order 308, dated Sept. 9, it is ordered that the following tariffs and supplements be approved; the said tariff and supplements, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette:—

Essex Terminal Ry., C.R.C. 544.
Boston & Maine Rd., Supplement 1 to C.R.C. 1908.
Maine Central Rd., Supplement 1 to C.R.C. no. C.1566.

The Canadian Freight Association's Manager gave notice in the Canada Gazette of Sept. 11 of the supplements to standard freight tariffs which had been approved by the Board of Railways Commissioners, and published the rate scales thereof.

In accordance with the Board of Railway Commissioners' general orders 309 and 310, the various railway companies have given notice, in the Canada Gazette, of the supplements to their standard freight and passenger tariffs, putting the new rates in force.

Edmonton, Dunvegan & British Columbia Ry. and Central Canada Ry. Rates.

S. J. McLean, Assistant Chief Commissioner, Board of Railway Commissioners, gave the following judgment, Sept. 8, on the application of Edmonton, Dunvegan & British Columbia Ry. and Central Canada Ry. for approval of standard freight and passenger tariffs increasing their rates:—Application was launched for a 50% increase in freight rates and a corresponding increase in passenger rates. The rates of this railway are, for the reasons set out in "Re Edmonton, Dunvegan & British Columbia Ry. Co., 22 Can. Ry. Cas., 1," permitted to be on the Mountain scale. The application as launched asked, as has been pointed out, for a 50% increase in standard passenger rates. The standard rate of the Mountain scale being 4c., this would give a rate of 6c. a mile. In the course of the hearing, counsel for the railway companies substituted 5c. as the maximum rate per mile for which they were asking.

At the hearing, representation was made by counsel for the railways that a general application based on increased costs of operation was in course of preparation by the railways subject to the Board's jurisdiction. Representation was made at the hearing by Mr. Ford, counsel for the Grand Prairie Board of Trade, that the matter of rate increase should stand over until the general application for rate increase was dealt with. Subsequent to the hearing, the Board received a telegram from the Secretary of the United Farmers of Alberta, strongly urging that the application should not be decided before the general application of railway rate increases. When the application for general rate increases was launched, notification of the hearing was given to him.

During the hearing, representations were made as to the condition of the ser-

vices afforded on the applicant railways. It was strongly urged that the need for retention of the Mountain scale basis no longer existed. In addition to what was set out at the hearing, representations are on file from various organizations taking this position. It was strongly urged that with the limited population at present located in the country served by the railways concerned, any increase of rates would be highly detrimental. The burden of increased rates is one which should be imposed only when there is a thoroughly established justification therefor. At the same time, in the present application, as well as in the application launched by the railways for a general increase in rates, much material was submitted, reinforcing what is a matter of common knowledge, viz., that in the period which has elapsed since 1914 railway costs of operation have practically doubled, while rate increases have been very much less. The weighty responsibilities imposed upon the Board by Parliament compel the conclusion that rate inadequately remunerative are not only detrimental to the railway concerned, but, in a wider and more important phase, are detrimental to the public served by the railway, because if the rates do not adequately remunerate for the service, the efficiency will tend to deteriorate, and there will be progressive difficulty in obtaining those adequate facilities which are essential if traffic is to move.

While the Board was considering the evidence submitted in the present application, the application of the railways subject to the Board's jurisdiction for a general increase in rates was launched; and the Board was impressed with the idea that the position was well taken that the decision in the present application was one which should be considered in connection with the decision in the general rate application.

The placing of the Edmonton, Dunvegan & British Columbia Ry. on the Mountain scale was, as indicated in the judgment already referred to, a temporary measure. Conditions have not, however, so changed as to warrant at present the applying of the Prairie scale instead of the Mountain scale. As already pointed out, the present application, in the first instance, asked for an increase of 50% in passenger rates over the Mountain scale rate. Subsequently, this was reduced to an increase of 25%. The increase in passenger rates as allowed in the decision of the Board which has just issued in the general rate investigation is 20%, subject to a maximum rate of 4c., it being further provided that one-half the increase shall disappear at the end of Dec., 1920, and the other half on July 1, 1921.

On considering the various factors involved, I am of the opinion that the applicant railways should be allowed to put in force the same rate increases as are authorized in the Board's judgment in the matter of the application of the Railway Association of Canada, on behalf of the railway companies members thereof, and of all other railway companies within the jurisdiction of the Board, for authority to make a general advance of 30% in the tolls at present charged for the carriage of freight by the said companies; and that the rate increases authorized herein may become effective on the same date as authorized in the judgment in the application above referred to.

Commissioners Goodeve and Rutherford concurred in this judgment.

Provisions for Appeals from the Board's Decisions.

The Railway Act 1919, contains the following provisions:

"(1) The Board may, on any appeal, order or vary any order or decision made by it, or may rescind any decision before reaching it.

"(2) The Governor in council may, at any time in his discretion, without application of any party, person or company interested in or to the case, question, and without any petition or application, vary or rescind any order, decision, rule or regulation of the Board, whether such order or decision is made inter partes or otherwise, and whether such regulation is general or limited in its scope and application; and any order which the Governor in council may make with respect thereto shall be binding upon the Board and upon all parties.

"(2) An appeal shall lie from the Board to the Supreme Court of Canada upon a question of jurisdiction, upon leave therefor being obtained from a judge of the said court upon application made within one month after the making of the order, decision, rule or regulation sought to be appealed from, or within such further time as the judge under special circumstances shall allow, and upon notice to the parties and the Board, and upon hearing such of them as appear and desire to be heard, and the costs of such application shall be in the discretion of the judge.

"(3) An appeal shall also lie from the Board to such court upon any question which in the opinion of the Board is a question of jurisdiction, or both, upon leave therefor having been first obtained from the Board within one month after the making of the order or decision sought to be appealed from, or within such further time as the Board under special circumstances shall allow, and after notice to the opposite party stating the grounds of appeal; and the granting of such leave shall be in the discretion of the Board.

"(4) No appeal, after leave therefor has been obtained under subsection 2 or 3 of this section, shall lie unless it is entered in the said court within 60 days from the making of the order granting leave to appeal.

"(5) Upon such leave being obtained the party so appealing shall deposit with the Registrar of the Supreme Court of Canada \$250, by way of security for costs, and thereupon the Registrar shall set the appeal down for hearing at the nearest convenient time; and the party appealing shall, within 10 days after the appeal has been so set down give to the parties affected by the appeal or the respective solicitors by whom such parties were represented before the Board, and to the Secretary, notice in writing that the case has been so set down to be heard in appeal as aforesaid; and the said appeal shall be heard by such court as speedily as practicable.

"(6) On the hearing of any appeal, the court may draw all such inferences as are not inconsistent with the facts expressly found by the Board, and are necessary for determining the question of jurisdiction, or law, as the case may be, and shall certify its opinion to the Board, and the Board shall make an order in accordance with such opinion.

"(7) The Board shall be entitled to be heard by counsel or otherwise upon the argument of any such appeal.

"(8) The court shall have power to fix the costs and fees to be taxed, allowed and paid upon such appeal, and to make

rules of practice respecting appeals under this section; and, until such rules are made, the rules and practice applicable to appeals from the Exchequer Court shall be applicable to appeals under this Act.

"(9) Neither the Board nor any member of the Board shall be personally liable to any costs by reason or in respect of any appeal or application under this section.

"(10) Save as provided in this section:—
"The every decision or order of the Board shall be final; and,

"(b) no order, decision or proceeding of the Board shall be questioned, or reviewed, restrained or removed by prohibition, injunction, certiorari, or any other process or proceeding in any court."

The Dominion Government States its Position.

The following official statement was given out at Ottawa, Sept. 11:—"Telegrams have been received from different parts of the country protesting against the judgment of the Board of Railway Commissioners granting a general increase in railway rates, and requesting that the action of the Board should first be suspended and afterwards set aside by the Government. Many of the wires received have been sent under misapprehension as to the position of the Board of Railway Commissioners and its action, to the Government. The wires, indeed, would indicate that a belief exists which, if not prevalent, has at least obtained in certain parts of the country, that the Board of Railway Commissioners is merely a department of the Government service. This is not the case, and it is important that the right position be stated.

"In 1903 Parliament decided that the control of railways was to be removed from direct departmental and political interference and provision was made for a Board of Railway Commissioners. The Board was subsequently constituted and has since discharged the statutory and judicial functions assigned to it in a manner undoubtedly, on the whole, in the public interest, and to the general acceptance of the people. It has not been interfered with by this or any other government. Instead of being a mere governmental department, the Board is, by statute, constituted a court, and has the rights, privileges and independence of a court. The act, however, provides for an appeal to the Governor in council, and reserves the right of the Governor in council on such appeals to vary or rescind any order, rule or decision of the Board. The practice that has grown up under this rule is well settled. The decisions of the Board cannot lightly be interfered with. As a matter of fact, since the Board commenced its operations no judgment of the Board has been set aside by the Governor in council. In a case of the importance of the present it undoubtedly becomes the duty of the Governor in council to go carefully into the whole of this issue, to hear the arguments that may be made, and, after becoming seized of the whole matter, to dispose of the appeal, having regard to the underlying principles of the Railway Act, the rights of shippers, the rights of the carriers, and the underlying national interests.

"The question of a stay of the Board's judgment has been as carefully considered as the very short time at the Government's disposal renders possible. The Board's judgment goes into effect on Sept. 13. The Government has had before it the complete judgment of the Board, embodying references to the evi-

dence of the reasons for judgment. This has been carefully studied. As against this there have been, and, of course, could be presented, only brief contentions by way of protest. The judgment finds that the relief granted is necessary and should be applied, and this after the hearing of evidence and arguments on both sides. A suspension means more or less indefinite postponement, and if the judgment is right, would render impossible the remedying of any injustice done. The judgment of the commissioners, which, it should be pointed out, is unanimous, being concurred in by all the commissioners who sat upon the case, further indicates that the objections now urged were taken into account, and emphasized that such objections went to the measure of relief that ought to be granted rather than to the claim that no increase should be made. The official judgment of the Interstate Commerce Commission of the United States has, as well, been available for reference. This judgment, it may be noted, is now in force. A perusal of this judgment discloses that more general, and, in many cases, heavier increases have been granted to railways in that country. For example, on coal the Interstate Commerce Commission has increased the rate 35% in western territory, and 40% in eastern territory. In Canada the rates on coal are increased 10c. a ton on all existing rates not exceeding 80c., and increased 15c. a ton on all existing rates over 80c. a ton and not exceeding \$1.50 a ton; and 20c. a ton on all existing rates over \$1.50 a ton.

"It will be noted that the increase in Canada is very considerably the lower. Coal constitutes a large proportion of the total traffic of Canadian carriers. The rates on sand, gravel and crushed stone in the U.S. have been increased 40% for the eastern territory and 35% in the western. In Canada no increase whatever is allowed. On cordwood, slabs and mill refuse used for domestic fuel, the same increase has been granted in the U.S., while in Canada the increase is held down to 10%. The general increases allowed in U.S. territory are reduced in the cost of milk movement, the increase allowed there by the Interstate Commerce Commission being 20%. In Canada no increase whatever is allowed.

"Over and above this, the increases in the U.S. are not limited as to time in the manner as to which increases in Canada are. The general increases of 35% in western territory and 40% in eastern territory allowed by the Canadian Board are reduced, under the judgment, to 30% and 35% effective Jan. 1 next, and, in addition, the railway companies are bound to submit monthly statements so that their earnings may be checked and reductions made in rates, in case the rates allowed proved unnecessarily high.

"It should also be noted that the increase in passenger rates is also limited. In the U.S. territory the increase is 20%; in Canada the increase is 20%, but in Canada the increase is to be reduced to 10% effective January 1 next, and on July 1 next the increase is cancelled altogether. No limitations are made in the U.S. order.

"The above references are necessary to be taken into account when the Government is asked to take responsibility for the confusion, and possibly the injustice, that may be done at this date by interfering with the Board's order to suspend its application. The whole subject can, however, be fully gone into on appeal. Every facility will be given to argue the merits of all contentions ad-

vanced and to review the entire order. If it should appear to be a case where the appeal should be granted and the decision reversed, there could, if deemed proper, be provision for rebates of rates charged beyond those ultimately fixed. The Government, while decided that it could not justify now a suspension of the order, will facilitate in every way the early

hearing of the appeal."

Appeals against the Board of Railway Commissioners' Decision.

We were advised by the Clerk of the Privy Council on Sept. 23 that appeals to the Privy Council, against the Board of Railway Commissioners' judgment of Sept. 6, authorizing increases in railway freight and passenger rates had been

received from the Manitoba and Saskatchewan governments, the Prime Minister of Manitoba, the cities of Toronto and Winnipeg, the Halifax, Winnipeg and Edmonton boards of trade and the Canadian Wholesale Grocers Association, and that the appeals would be heard in the Privy Council Chamber, Ottawa, on Sept. 29.

Car Records and Their Relation to Transportation and Car Accounting.

By J. D. Altimas, Assistant General Superintendent Car Service, C.P.R., Montreal.

In the early days of railroading, car records were not much in vogue, for the reason that cars usually were confined to service on the owner's rails. Shipments moving from one road to another were transferred at the junction point to cars of the receiving road. This condition obtained for many years, but with the expansion of industrial activities came through rates and through routes, and these aided, by that all important factor, competition, gradually compelled all roads to permit their equipment to be loaded to points on other roads, with the understanding that the car and the contents would move through to destination without breaking bulk. As cars commenced to move from one road to another, always subject to possible delays and diversions, it became necessary for car owners to keep a close tab on the movements of both home and foreign equipment. These same conditions made it necessary for the roads to get together and formulate rules and regulations to cover the interchange of equipment and to protect the accounting of car hire.

Up to June 30, 1902, the remuneration for the use of freight cars was on a mileage basis, i.e., so much for each mile a car moved. The rates varied according to special conditions and territories, but usually the rate for common cars, i.e., box, flat, coal and stock, was six mills a mile, while the rate for special class cars, i.e., refrigerator, tank, palace horse, etc., was $\frac{3}{4}$ c. a mile. These rates were paid for both the loaded and empty movement, but when cars did not move, they did not earn anything. In those days we did not have any demurrage regulations, and as a result cars were delayed most unreasonably at unloading stations and in many cases at the loading stations. Many of the railways deliberately allowed empty cars to lie around, waiting prospective loading, to avoid empty mileage. Such delays were often to the great detriment of the car owners, which had business available on their own roads, which they were unable to accept and move on account of shortage of equipment. In the early nineties, when the writer was chasing cars through New England and the New York and Pennsylvania territories, it was not unusual to find cars delayed under load for periods of two, three or even four months at a time, and the shippers or consignees did not consider this practice unreasonable, although they very seldom made much effort to justify it, simply stating that it was one of the risks incident to the transportation business. It certainly was cheap storage for the shippers and consignees, although a most expensive proposition for the railways, both in the matter of car supply and terminal facilities. These conditions, which permitted excessive delays to car equipment, were mainly responsible for the stories, both told and published, of "lost cars." There is no doubt that many roads had

considerable difficulty in locating their equipment in those days, principally due to the inadequate records kept by many of the roads, but since the advent of the per diem as the basis of remuneration for the use of freight cars, we do not hear much about lost cars. Under per diem rules the road receiving a car must account for it to the car owner, at the current per diem rate, from the date of its receipt up to the date it is delivered to the owner, or to another road, or in the case of a destroyed car, up to the date it is reported as a "destroyed" car to the owner, in accordance with per diem rules.

We may take it for granted that in recent years the majority of the railways, especially the larger roads, have been maintaining fairly good records. Generally speaking, car records are maintained at all stations and contain everything there is to know in connection with the handling of the car and contents, including the charges assessed, or collected, while in the terminal. Apart from the accounting features these records show the following information: Initials and number of car, kind of car, date and time of arrival, train reference, point of shipment and kind of commodity if a loaded car, date and time of notification to consignee of arrival of his shipment, date and time of placement, date and time of release, date and time car is forwarded, train reference, and, if car is loaded, kind of commodity and destination.

At stations where a great number of cars are handled, there is also maintained a daily on hand report, usually referred to as the yard check. This report shows the initials and number of the car, kind of car, on what track located and whether loaded or empty, and if held, for what purpose. At stations where cars are interchanged with other roads, an interchange report is maintained, which shows the initials and number of the car, kind of car, name of road to which car is delivered, date and time of interchange, name of billing station, name of destination station and kind of contents. An index record for ready reference is also maintained at the larger stations.

The movements of all cars on any part of the road and on foreign roads are recorded in the books of the car accountant, whose office is usually at headquarters. The basis of these records is the agents' interchange report, the conductor's freight or mixed train report, and the foreign road's junction report.

The interchange report now in use on all roads is authorized by the American Railroad Association, and is known as the reciprocal form of report. The agent of the delivering road prepares the report in quadruplicate, showing information for all cars delivered, and passes the completed report to the agent of the receiving road, who checks the information shown thereon, and, if he finds it correct, signs all four sheets, certifying to the receipt of the cars. He retains one

copy of the report for his station record, sends one copy to his car accountant, and returns two copies to the agent of the delivering road. The latter keeps one copy for his station record and forwards one copy to his car accountant.

The conductor's freight or mixed train report is not uniform on all roads, but the information usually shown includes: initials and number of car, loaded or empty, kind of car, date of movement, name or number of station taken at, name or number of station left at; if loaded, kind of contents, name or number of billing station, name or number of destination station. Some of the roads also include information covering tonnage rating, tare tons, content tons, locomotive record, etc., for statistical purposes.

Under American Railroad Association Rules, where a railway delivers a foreign car to a connection, not the owner of the car, he is obligated to advise the car owner the name of the road the car was delivered to, and the date of the movement, and to show whether the car was loaded or empty. This is called the junction report. Roads which use the cut up system preserve the interchange slips for foreign cars delivered, and send them to the car owners as the junction report. This saves the delivering road considerable work, and gives the car owner a first hand record, avoiding all errors due to transcribing.

Practically all of the larger roads now use the cut up or self transcribing system for conductor's train report and the agent's interchange report. Under this system the conductor's train report consists of one wide form giving all the information required, including an extra column for the date of the movement, also one narrow form, which is a duplicate of the wide form, in so far as it refers to the initials and number of the car, number of station car is taken at, and left at, and date of movement. This narrow form has punch holes about 2-16 of an inch, between the lines, to the left of the initials column for the use of the sorting clerks. These two forms are made at one operation by the use of carbon paper. The information covering initials and number of cars, numbers of stations cars are taken at and left at, and the date of the movement must be written in for every car handled. Ditto marks must not be used. This is necessary on account of the forms being cut up into slips. Each slip must show complete information covering the car referred to. For all other information called for by the form ditto marks may be used wherever considered advisable.

The agent's interchange report consists of four wide forms giving all the information required, including an extra column for the date; also two narrow forms which are duplicates of the wide forms, in so far as they refer to the initials and number of the cars, name of road delivered by, and name of road delivered to, name of station delivery is effected, and

rate of delivery. The narrow forms have punch holes about 2-16 of an inch, between the hole to the left of the initials column for use by the sorting clerk. The narrow forms are of different colors, one pink for the use of the delivering agent, and one ordinary for the use of the receiving agent. The pink indicates a delivered receipt, the ordinary a received receipt. The original and five copies of the report are made in one operation by use of carbon paper. The information covering initials and numbers of cars, name of road delivered to, name of station at which delivery is effected, and the date of delivery, must be written in for every car delivered. Ditto marks must not be used. This is necessary on account of the forms being cut up, and each slip must show complete information covering the car referred to. For the information called for by the form ditto marks may be used wherever considered advisable. These forms, when completed by the agents and conductors, are forwarded promptly to the car accountant's office, where they are entered into the car record books.

The handling of these reports in the car record office is a systematic and interesting operation which I will endeavor to describe to you. As soon as the mail is opened the reports are passed from the mail desk to the examining clerks, who see that all the information called for by the form is properly entered, after which the narrow forms are separated from the wide forms. The wide forms of the conductor's train report are immediately turned over to the statistical department for its use, while the wide forms of the interchange reports are filed for ready reference. The narrow forms are then sorted, the ones having only one car being placed in one lot, those with two cars in another lot, those with three cars in another, and so on. These forms are then made up into packages of from 200 to 300 per package, the forms showing the smallest number of cars being on top. This is done to enable the cutter to dispose of the blank slips as they come from the machine, and thus eliminate the unnecessary handling of blank slips by the sorting clerks. Interchange reports are given preferred handling. When the narrow forms reach the cutter, they are put through the machine, and as the slips leave the machine the cutter immediately separates the blank slips from the record slips, and throws the blanks into a receptacle used for this purpose, thus eliminating the unnecessary handling of blanks by sorting clerks. These slips are placed in small boxes, enclosed on three sides only, and these boxes have their tare weight (equivalent number of record slips) stenciled on them, so as to facilitate the weighing. These tare weights are checked occasionally to see that there is no variation. The boxes with the record slips are weighed, the correct weights taken, and they are then passed on to the sorting clerks. The machine used for this purpose is of the advance lever type, and when the reports are of uniform size, with spacing and punch holes also uniform, there is practically no chance for mutilation of slips.

The paper used in the reports is of uniform weight, and when cut up the slips average about 17 to 1-16 of an ounce, or 272 an ounce. With a list of scale weights from 1-16 of an ounce to one pound, it is a very simple matter to ascertain the actual number of record slips handled each day by the sorting clerks and the record clerks. A clerk

scales the slips as they come from the cutter, and credits the various sorters with the actual number of slips handled by them. This clerk also weighs the slips turned in each night by the various record clerks, and credits them with the correct number of record slips worked. An ordinary druggist scale, with a single beam graduated 1-16 of an ounce to five ounces, capacity 8 lb., gives every satisfaction.

The sorting table is usually a high desk, the top being slightly raised toward the back, with two rows of spindles 1 in. apart, the second row being about 7 in. behind the first. The spindles are usually made of brass, and are about 3/4 in. high. There is a shoulder or collar on the spindle, about 3/4 in. from the bottom, and this part below the shoulder fits into holes bored in the top of the desk, which leaves about 4 in. of spindle above the desk. One or more spindles are allotted for each record, and sufficient spindles to accommodate all records are looked after by one sorting clerk.

The spindles are a little less than 2-16 of an inch and as the record slips have a hole 2-16 of an inch punched to the left of the initials column, the sorters slip them on to the spindles very rapidly, the only thing necessary being a knowledge of the various cars allotted to each spindle. Lists are prepared which show this information, and these are posted in suitable places on the sorting desk. Sorting clerks are educated to hold the slips in the right hand and sort with the left. When the slips are held in the left hand, the fingers cover the initials of the cars and the handling is consequently slower. Sorting clerks generally handle about 26 to 30 slips per minute. Some roads do not use spindles. Instead they sort into boxes, each box having a sufficient number of small compartments about 5 1/2 by 3/4 in. to take care of the number of records operated.

The original sorting is done to suit individual requirements. Usually the first sorting is done in book order and the second in page order. In many instances, owing to the make-up of the book, a second sorting is not economical. The junction records, when received on the standard junction report form, are transcribed by typewriter to the cut up form, and are passed through the machine in the same manner as other forms and are then passed on to the sorters. Junction records received on the cut up forms are at once turned over to the sorters for handling. At regular periods during the day the record clerks take or receive the record slips from the sorting desk, and proceed to enter them in their books. By this method a record clerk does not have to handle any records except those which are to be entered in his book.

The record books are usually about 18 in. long by 17 in. wide. The home car record sheets are ruled about as follows: One column about 1 in. wide for last account, one column about 1 in. wide for car number, then 31 columns 6-16 of an inch wide, for the days of the month, and one column about 1 in. wide to the extreme right for mileage or per diem purposes. Each page holds 50 cars, and a book usually includes 5,000 cars in numerical order. The home car record usually is made up to take care of two months records, in order to avoid the necessary transferring of the records from one book to another.

The foreign car record sheets are ruled as follows: One column about 3/4 in. wide, for the last account, one column

about 3/4 in. wide, for initials, one column 3/4 in. wide, for number, one column 3/4 in. wide, for kind of car, one column 3/4 in. wide, for per diem days earned, one column 3/4 in. wide, for checking purposes, 31 columns 3/4 in. wide for the days of the month, and three or four columns 6-16 of an inch wide for mileage purposes. Each page holds 50 cars, and each book contains space for 5,000 or 6,000 cars, of which 1,500 to 1,800 are actually in service at any one time. These books are made up to show cars in alphabetical road order and in numerical order and are indexed for ready reference.

The loose leaf principle for car records is generally used by the larger roads. They cost considerably less, and can be manipulated to suit all conditions; especially is this true of the foreign car records, where the number of cars handled fluctuates from month to month.

When the clerk is ready to enter records, he first finds the space allotted to the car, and then enters in the block which represents the date of the movement, the number of the station at which the car was taken, and the number of the station at which car was left. Usually the number of the station at which car is taken already appears in the block, and it is only necessary to enter the number of the station at which the car is left, and a check mark drawn after the number of the station at which the car is left indicates the record is complete. Where the car moves empty, the pencil line drawn above the number of the station at which car is left indicates the record is complete.

In the case of interchange records, a receipt from a connecting road is entered by showing the symbol representing the road in the upper left hand corner of the block, immediately followed by the number of the station. To indicate a delivery to a connecting road, the symbol of the road is entered in the lower right hand corner of the block, preceded by the station number. In practically all cases the number of the station already appears in the record and it is only necessary to enter the symbol.

A good medium hard pencil is used for entering records. Some roads use a black pencil to indicate a loaded movement, and a red or purple pencil to indicate an empty movement. Several of the larger roads use a black pencil exclusively, and draw a line above the number of the station at which the car is left, to indicate the car moved empty. Home record clerks average about 300 entries an hour, whereas foreign record clerks average about 225 entries an hour.

Roads which do not use the cut up form of reports, simply take the interchange reports, the conductors' train reports and the junction reports, from the mail desk, place them in packages of suitable size for handling and pass them around the several record clerks, who enter the movements direct from the reports to the books. Under this method each clerk must examine every car shown in the reports, in order to pick out the records which are to be entered in his record. This takes considerable time and labor. Any road which handles more than six or seven records will find it advisable and economical to use the cut up form of reports.

With a record of every movement made by cars on his own rails, with the interchange record of cars delivered to and received from connections, and with the junction record of his cars furnished by foreign roads, a car owner has a complete record of every one of his cars dur-

ing each month of each year. This enables him to keep a close check on the handling of his cars by foreign roads, and to check the earnings of his cars under any and all circumstances. He is also in a position to know what other owners' cars are doing on his rails.

Car records, properly maintained and kept up to date, are of great benefit, and serve many purposes of the transportation department in addition to being the basis of the accounting for car hire. The current records are used constantly: To furnish records to the public in connection with shipments in which they are interested. To furnish records to the transportation department, to assist in tracing freight urgently required at destination, or which may have been unduly delayed in transit, or which may be required to be diverted in transit. To furnish location of special class equipment, such as refrigerator, tank, potato, Eastman heaters, palace horse, special grain cars, etc., to enable the car service department to keep them in the special service to which they are allotted or to move them to points where they are required, also to see that such cars are used to full advantage. To furnish car movements, loaded and empty, to the transportation department, to assist in tracing delays and placing responsibility, and to the claims department to assist in locating overs and shorts and disposing of claims. To check the handling of cars on foreign roads and thus overcome unnecessary delays and diversions. To furnish weekly or monthly statements of the distribution of all classes of equipment by districts or divisions. To furnish records of carloads transhipped in transit. To furnish mileage, loaded and empty, made by special class cars of any class. To check the record of foreign equipment to see they are not unduly delayed or used contrary to car service rules. To check repair bills as to location. These are the principal items, but numerous enquiries of all kinds develop each day which can only be answered by reference to the car records.

A record clerk works on the average about six hours a day in entering records, and about two hours a day in furnishing locations, movements and other information.

The car record is the basis of the car hire accounting system, and the car records of foreign equipment handled are usually turned over to the accounting department about the tenth day following the close of the month. The first duty of the clerks on accounts is to ascertain what records are incomplete, i.e., what cars are short an interchange receipt or delivery and to check back against the interchange reports to see if such records were skipped by the record clerks. The second operation is to extend the number of days each car was on the rails, and where there is an incomplete record, to list the initials and number of the car so as to aid the correction staff in completing the records.

Where a missing delivery is involved, per diem is usually allowed up to the date car is last reported moving. In the case of a missing receipt per diem is allowed from the date car first moved. When the record has been completed, the balance of the per diem, if any due, is allowed in a subsequent month's report. After the per diem days have been extended, a per diem report is prepared for each road, showing the car number and the number of days earned, and same is forwarded to the car owner, within 40 days from the last day of the month in

which the per diem was earned. On receipt of the per diem report by the car owner, he enters in the record opposite each car the number of days per diem allowed by each road, and after all the per diem reports have been entered, if his records indicate a shortage, he has the privilege of making claim against the road which, according to his records, has short paid the per diem. Such claims to be valid must be issued and handled in accordance with the rules.

In addition to preparing reports for per diem earned currently, reports are also prepared to cover errors and omissions in per diem reports of previous months, to cover switching reclaims, to cover rule 14 reclaims, namely, cars held by one road on account of inability of another road to receive and to cover reclaims due to special conditions.

Under per diem rules, per diem must be paid by a road using a car to the car owner, for each and every day car is in service on that road, but where a road handles a car in terminal switching service for another road, it is entitled to an arbitrary reclaim from the carrier road of an agreed number of days not to exceed five for each car handled in such service. Per diem rule 15 also provides that where a road holds cars on account of the inability of another road to receive them, the holding road is entitled to reclaim from the road on whose account the cars were held, the full amount of per diem involved, always provided that due notice is given in accordance with the rules.

The per diem rules agreement, to which practically all Canadian and United States roads subscribe, is promulgated by the American Railroad Association and lays down rules to govern every phase of per diem accounting. These rules in their original form were adopted and made effective on July 1, 1902. Since that date there have been changes from time to time in the rate, to take care of the increased cost of owning and operating a car. At present the rate is 90c. a day and many roads claim this rate under present conditions is not sufficient compensation to take care of the capital and maintenance charges. The main objection to the rules in their original form was that no penalty was provided for the nonpayment of per diem earned, and as a result the car owner was put to considerable expense to collect what rightly belonged to him. On July 1, 1913, a penalty of 5c. a car a day was made effective when per diem was not paid to the car owner within six months from the last day of the month in which the per diem was earned. At first this rule brought about considerable improvement, but it did not accomplish what was expected of it. To meet this situation, which was the weak spot in the per diem rules agreement, revised rules, with severe penalties for non-payment within a reasonable period, were made effective on Mar. 1, 1920. The next few months will show just how these regulations will work out.

The per diem rules have done more than anything else to force the railways to keep proper car records. While it may be true that the cost of accounting for car hire under per diem rules is much greater than under the mileage plan, yet I doubt very much if you could find a dozen railway car owners who would agree to return to the old method of settlement for car hire on a mileage basis. Under the per diem system a car owner knows exactly what his cars earn, and methods are provided to permit of a pro-

per accounting, whereas, under the mileage plan, the car owner had no means whatever of checking the earnings of his cars on foreign roads, and had virtually to accept whatever was allowed. In the old mileage days, many cases of deliberate dishonesty in accounting were developed, and the conditions helped a great deal in the agitation which was carried on in favor of the adoption of the per diem system.

Car records to be of value must be properly maintained and kept up to date. This can only be accomplished by the hearty co-operation of all concerned in the preparation and handling of the reports and the records. In the car accountant's office surprise checks are used to a great extent, and with good results, to ascertain if the correct and complete information is being recorded in the books. With this system the clerks soon realize that they must do their work properly or make way for others who will. The secret of the whole transaction is system and supervision.

The foregoing paper was read before the Canadian Railway Club, in Montreal, recently.

*Deficit.

The Canadian Express Company's History.

By John Pullen, President, Canadian Express Co.

Early in 1844, Messrs. Pullin & Copp sailed a stage express business between New York, Albany, Troy and Saratoga Springs. A little later they connected at Albany and Troy with Virgil & Howard's Express, which operated to Whitehall & Massena, thence by boat to Burlington and Plattsburgh on Lake Champlain; St. Johns, Que., on the Richelieu River, stage to Laprairie, Que., and across the St. Lawrence to Montreal. The crossing of the St. Lawrence, between Laprairie and Montreal, was effected by scows, propelled by oars. In the winter these scows were pulled over the ice. Late in the season, when open stretches of water were encountered, oars were used, and when the navigation of the open stream was completed the scow was drawn up and again pulled over the ice. These lines were consolidated about 1844 under the name of Pullin, Virgil & Co.'s Express, operating from New York to Albany, through northeastern New York, Vermont, and to the principal cities of eastern Canada.

In 1844, Cheney, Rice & Co. operated a stage express business from Boston to Montreal. Later, they extended their operations from Montreal to Toronto by stage, on runners during the winter, and steamboat during the navigation season.

The United States and Canada Express Co., which was a consolidation of Cheney, Fiske & Co., having facilities on the Boston & Fitchburg and the Worcester & Nashua Roads, as early as 1848; Penniman & Co., operating between Boston and Lowell; and other small lines, was a very important company, under the management of Benjamin F. Cheney, of Boston, and Frank Richardson, Superintendent, at St. Johnsbury, Vt. This line covered a portion of eastern Massachusetts and extended up through New Hampshire and Vermont into Canada.

In 1854, Johnson & Co. started an express from Albany to Rutland and Saratoga, N.Y., with the idea of extending it to Canada, which was later consolidated with Pullin, Virgil & Co. under the name of the National Express Co. This company had express contracts on the following railways: Hudson River; Troy & Boston; Saratoga & Whitehall; Rutland & Washington; Western Vermont; Rutland & Burlington, and Champlain & St. Lawrence.

The Champlain & St. Lawrence Ry. was the first railway built in Canada. It was opened for traffic between Laprairie and St. Johns, Que., 17.38 miles, on July 23, 1836. The first train consisted of four cars, drawn by horses, locomotive power being adopted in 1837. This railway constituted an important link in the through rail and water route between Montreal and New York, via the Richelieu River, Lake Champlain and the Hudson River.

In 1854, a group of Canadian business men formed the British and North American Express Co., with a capital stock of \$200,000, to terminate in 10 years from May 1, 1855. The officers were: John P. Forsyth, President; Thos. Kirkpatrick, Vice President; Thos. Robinson, Secretary; E. W. Palmer, Treasurer, and J. C. Clark, General Superintendent. A contract was made with the St. Lawrence & Atlantic (now part of the Grand Trunk) covering express operations between St. Lambert and Richmond, Que., and Portland, Me., via the between Rich-

mond and Point Levi, opposite the City of Quebec. Although the railway from Montreal to Toronto and Point Edward (Sarnia, Ont.), was completed in 1855, our information is that the express company operated between Montreal and Toronto and Hamilton by the Royal Mail Line of Steamships during the navigation season, and by stage, on runners, during the winter. The first year was spent in this manner, and a meeting was held in Montreal, at which the representatives of the several express companies operating in Canada were present. The British & North American Express Co. was represented by its Treasurer, E. W. Palmer, and General Superintendent, J. C. Clark; Cheney, Rice & Co., by Benjamin P. Cheney, of Boston, Mass., and Pullin, Virgil & Co. by E. H. Virgil, of Troy, N.Y. The object of the conference was to endeavor, if possible, to consolidate under one name and management the various express companies operating in Canada. After much controversy, these interests referred to above were merged under the name of the British & American Express Co., with a capital stock of \$300,000, which company continued to operate until the spring of 1865.

Realizing the importance of British and European trade, the British & American Express Co. established an office at Liverpool in the latter part of May, 1858, with Wm. Blackwood as agent. Upon Mr. Blackwood's death, Wm. Cuthbertson was appointed General Agent, and on the latter's death, E. J. Wearing was appointed and is at present the General Agent of the Canadian Express Co. at Liverpool. The establishment of the agency at Liverpool in 1858 was the nucleus for the extensive European organization of the Canadian Express Co., of which F. C. Salter is European Traffic Manager, with headquarters in London.

On Dec. 8, 1864, a meeting was held at Montreal, of the subscribers to take stock in a new express company to succeed the British & American Co. Wm. G. Fargo occupied the chair. It was resolved that the new company be called the Canadian Express Co.; that a provisional board of directors, consisting of B. P. Cheney, E. H. Virgil, Wm. G. Fargo, Rybert Kent and Thos. Kirkpatrick should obtain a charter for the new company, purchase the British & American Express Co.'s property and good will, and make arrangements for continuing the business from Jan. 1, 1865, until the new company received its charter by letters patent. This was issued Feb. 16, 1865, and read, in part, as follows:—

"That by and with the advice of our executive council of our Province of Canada . . . we do hereby certify that the said B. P. Cheney, E. H. Virgil, W. G. Fargo, Rybert Kent and Thos. Kirkpatrick, and all and every such other person or persons as now is or are or shall at any time hereafter become shareholders in the said company . . . a body corporate and legal entity, with perpetual succession, and a common seal, and by the name of The Canadian Express Company, with power to the said company to carry on the business of forwarding, as also of the constructing, owning, chartering and leasing of ships, steamboats, wharves, roads and other property required for the purposes of such forwarding business, the operations of this said company to be carried on within our said province, in and over the Grand Trunk Railway of Canada and all its branches, and all other railways . . . and also on all roads, rivers, lakes and other modes of communication within our said province."

The official seal of the Canadian Express Co. shows a pony express rider, which is emblematic of the express ser-

vice in the early days and the present time rapid transportation of merchandise, money and valuables. But how much more rapid it is today than prior to the advent of the steel highway, when a beaten path or a wagon track constituted the route between the business centers of the country.

The first meeting of the Canadian Express Co. after receiving its charter was held at Montreal, Mar. 15, 1865, when Thos. Kirkpatrick was elected President; Rybert Kent, Secretary-Treasurer, and Gilman Cheney, Superintendent. Semi-annual meetings of the directors were held at New York, Boston or Montreal, as the case might be. On Aug. 12, 1882, the President, B. P. Cheney, Sir R. J. Cartwright, E. H. Virgil, Gilman Cheney and Rybert Kent attended the semi-annual meeting at the Profile House, in the White Mountains.

Early in 1866 an arrangement was entered into between the Canadian Express Co. and the American Express Co., whereby, in consideration of the Canadian Express Co. relinquishing the line between Toronto and Hamilton, which was formerly occupied by the British & American Express Co., the American Express Co. turned over to the Canadian company the line between Toronto and Detroit.

On June 14, 1869, a new contract was made between the Canadian Express Co. and the Grand Trunk Ry. Co. Although particulars are lacking, it is presumed that the operations of the express company were extended over new portions of the railway system which had been built or acquired since the previous contract was entered into.

At a meeting of directors at Montreal Jan. 25, 1871, B. P. Cheney was elected President of the company, succeeding Thos. Kirkpatrick, deceased.

In 1872 contracts were made with the Toronto & Nipissing Ry. and the Midland Ry. (both now being part of the G.T.R. System) for the purpose of extending the company's operations over those lines.

At a meeting of directors at Boston, Feb. 1, 1875, a resolution was passed, increasing the company's capital stock from \$500,000 to \$1,500,000.

In 1877 a contract was made with the Intercolonial Ry. on behalf of the Canadian Express Co. and the Eastern Express Co., which were jointly interested and between which a partnership contract existed in relation to this business. The Eastern Express Co. was changed later to the Intercolonial Express Co., which was operated by the Canadian Express Co. as part of its system east of Riviere-du-Loup, Que., on the Intercolonial Ry.

In 1879 the Canadian Express Co. was operating on the Quebec, Montreal, Ottawa & Occidental Ry. between Montreal and Ottawa; also on the North Shore Ry. between Montreal and Quebec. Both these railways later became part of the C.P.R. System.

On Aug. 15, 1887, Gilman Cheney, Superintendent, was appointed General Manager, and was succeeded as Superintendent by Samuel Chadwick, who retired in 1889. James Bryce, who had been Superintendent at St. John, N.B., since 1882, was appointed Superintendent at Montreal, to succeed Mr. Chadwick. H. C. Creighton, who had been route agent at

Halifax, N.S., succeeded Mr. Bryce as Superintendent at St. John, which position he still occupies.

On Aug. 28, 1888, the American Express Co. agreed with the Canadian Express Co. to withdraw from all G.T.R. lines in Ontario west of Toronto, and transferred its entire business thereon to the Canadian company.

On Oct. 13, 1889, B. P. Cheney tendered his resignation as President, to take effect from Jan. 1, 1890. On Oct. 23, 1889, Gilman Cheney was elected President, the appointment to take effect from Jan. 1, 1890.

On Dec. 29, 1891, an agreement was made between the G.T.R. and the Canadian Express Co. whereby the railway company purchased the express company's capital stock at 43c. on the dollar, thereby becoming the sole shareholder, the express company, however, maintaining its identity.

On Jan. 1, 1892, L. J. Seargeant, General Manager, G.T.R., became President of the Canadian Express Co., and Gilman Cheney, Vice President, an honorary position which he held until his death in 1897. James Bryce continued to occupy the position of Superintendent at Montreal.

In 1896, when the late Chas. M. Hays became Second Vice President and General Manager of the Grand Trunk, he was elected President of the Canadian Express Co., and James Bryce, theretofore Superintendent, was appointed Manager. In 1901, when Mr. Hays retired from the G.T.R. to become General Manager of the Southern Pacific Co., Geo. B. Reeve became Second Vice President and General Manager of the G.T.R. and President of the Canadian Express Co., with James Bryce as Vice President and Manager. When Mr. Hays returned to the G.T.R. in 1902 as Second Vice President and General Manager, he again became President of the Canadian Express Co.

On Oct. 27, 1908, the Canadian Express Co. extended its service over Grand Trunk Pacific Ry. between Winnipeg and Edmonton, 800 miles, and followed the railway as it was built toward the Pacific coast, operating its service as soon as train service was established, and similarly with respect to the various branch lines.

On Oct. 1, 1911, Mr. Hays was elected Chairman of the board of directors of the Canadian Express Co. and was succeeded as President by John Pullen, theretofore Assistant Freight Traffic Manager, G.T.R. System.

On Dec. 1, 1911, the Canadian Express Co. entered into an agreement with the Timiskaming & Northern Ontario Ry. Commission for the operation of its service on that railway between North Bay and Cochrane, 253 miles, which forms one of the important links today in the through express service operated between Toronto and the Canadian northwest.

March 31, 1912, saw the retirement of James Bryce, Vice President and Manager, who had devoted 40 years of his life in the express service, 30 of which were exclusively with the Canadian Express Co.

Upon the death of Mr. Hays in April, 1912, E. J. Chamberlin was elected President of the G.T.R. and Chairman of the board of directors of the Canadian Express Co.

On Sept. 1, 1914, the Canadian Express Co. extended its service through to Prince Rupert, B.C., the Pacific coast terminus of the Grand Trunk Pacific Ry., 1,755 miles from Winnipeg.

Upon the completion of the National Transcontinental Ry. between Cochrane, Ont., and Winnipeg, 777 miles, and the inauguration of a through passenger train service between Toronto and Winnipeg, via G.T.R. to North Bay, T. & N.O.R. to Cochrane, and N.T.R. to Winnipeg, the Canadian Express Co. placed its service in operation between those two cities on July 13, 1915, thus giving an all Canadian transcontinental express route from the Atlantic to the Pacific.

On May 1, 1915, the Canadian Express Co. established its service on the St. John & Quebec Ry., now part of the Canadian National Ry., between Fredericton and Centerville, N.B., 88 miles.

On July 29, 1915, train service having been established on the National Transcontinental Ry. between Monk and Levis, Que., 110 miles; and between Quebec City and Fitzpatrick, Que., 123 miles, the Canadian Express Co. inaugurated an express service between those points.

On Feb. 1, 1916, the Canadian Express Co. extended its service from Fitzpatrick to Parent, Que., 119 miles, the National Transcontinental Ry. having inaugurated a passenger train service between those points.

June 11, 1916, saw the Canadian Express Co. operating through from Quebec City to Winnipeg via the National Transcontinental Ry., train service having been established between Parent, Que., and Cochrane, Ont., 302 miles.

On July 10, 1916, the Canadian Express Co. extended its service on the St. John and Quebec Ry. from Fredericton to Gagetown, N.B., 32 miles.

On July 26, 1916, the Canadian Express Co. placed its service in operation between Monk, Que., and Edmundston, N.B., on the National Transcontinental Ry., 125 miles.

A year later, through trains were operated over the National Transcontinental Ry. between Moncton, N.B., and Levis, Que., train service having been established between Edmundston, N.B., and Moncton, 230 miles. The Canadian Express Co. commenced to operate its service between the two latter points on June 22, 1917.

On Sept. 1, 1917, Howard G. Kelley was elected President of the G.T.R. Co. and Chairman of the board of directors of the Canadian Express Co., succeeding E. J. Chamberlin, who had retired from active railway life a few months previous.

On Jan. 1, 1918, the United States Railroad Administration took over, for operating purposes, certain of the lines of the Grand Trunk Ry. of Canada, located within the United States, viz.: Portland, Me., to Norton Mills, Vt., 165.1 miles; Lewiston Jct., Me., to Lewiston, Me., 5.4 miles; South Paris, Me., to Norway, Me., 1.5 miles; Detroit, Mich., to Port Huron, Mich., 57 miles, over which the Canadian Express Co., up to that time, operated an express service. It being the U.S. Railroad Administration's desire that the express operations on the railways under federal control should be conducted by a unified company, a contract was entered into with the American Railway Express Co. giving that company the exclusive privilege of conducting the express service thereon, effective July 1, 1918, on which date the Canadian Express Co. relinquished its control of the express service on the lines mentioned above; disposed of and transferred to the American Railway Express Co. all its movable property and equipment, and withdrew its representation at and participation in the expenses of the joint offices main-

tained at the International Boundary, viz., Buffalo, N.Y., Suspension Bridge, N.Y., Port Huron, Mich., and Detroit, Mich. Although the railways returned to private ownership on Mar. 1, 1920, the operation of the express service on the above mentioned lines has been continued by the American Railway Express Co.

On Oct. 20, 1919, the Canadian Express Co. further extended its service on the St. John & Quebec Ry. from Gagetown to St. John, N.B., 48 miles, via Westfield Beach, and the C.P.R., the St. John and Quebec Ry. having secured running rights over the C.P.R. from Westfield Beach to St. John, 13 miles.

In the early days the train messengers were responsible to the company for the charges on all waybills, both prepaid and collect, covering shipments originating at and destined to offices along their routes. They were in reality the company's travelling bankers. The agents remitted direct to the messengers the total of all collect charges on waybills covering shipments destined to their offices, as well as the total prepaid charges (less advance charges, if any) on waybills covering shipments forwarded by them. A messenger would first debit himself with the total of the collect charges on all waybills covering shipments received en route; second, debit agents with the total of the prepaid charges on shipments received en route; third, debit agents with the total of the collect charges on waybills covering shipments detained by him. Cash books were used, and messengers had to balance their accounts for each trip. The messengers, instead of the agents, as is now the case, were checked up by the auditor, as they were the custodians of the company's cash. A report had to be made to the company at the end of each round trip, consequently it was quite a simple matter for the auditor to form an opinion as to whether there were any irregularities or not. The absence of a remittance for two or three round trips would likely result in the messenger involved having his accounts checked.

Amongst the notable statesmen of Canada who served as directors of the Canadian Express Co. were Sir Richard Cartwright and Sir Alexander Campbell.

Among those prominent in the American Express Co.'s service who commenced their express careers with the Canadian Express Co. are: H. S. Julier, formerly Vice President and General Manager of the Eastern Department, was a train messenger on the Buffalo and Goderich route; J. R. Christie, General Manager of the New York city department, was at one time a clerk in the London, Ont., office; Robt. Mundie, formerly Comptroller, held a clerical position in the Montreal general office; Robt. Balfour, Assistant to Vice President, R. E. M. Cowie, of the Eastern Department, was a wagon man at Montreal.

A prominent man in the express world in the early days was D. T. Irish. Born at Shelburne, Vt., he entered the United States & Canada Express Co.'s service at Burlington, Vt., as a clerk under Wm. Henderson, agent. He went to Montreal at the age of 19 and became General Agent of the British & North American and United States & Canada Express Companies, to which were added later the Canadian Express and National Express Companies.

Canada Rolling Stock Co. Ltd. has had its registration, under the Nova Scotia Companies Act, revoked by the Nova Scotia Government.

Mainly About Railway People Throughout Canada.

F. G. Adams, who has been appointed Assistant General Freight Agent, Canadian National Grand Trunk Pacific Ry., Winnipeg, was born at St. John's, Nfld., Apr. 6, 1878, and entered railway service Sept. 4, 1898, since when he has been, to Dec. 1, 1907, clerk, general office, G.T.R., Montreal; Jan. 1, 1903, to Mar. 31, 1907, Contracting Freight Agent and Travelling Freight Agent, G.T.R., Montreal; Apr. 1, 1907, to Aug. 31, 1908, Contracting Freight Agent, G.T.R., Winnipeg; Sept. 1, 1908, to July 31, 1911, Travelling Freight Agent, G.T.R., Winnipeg; Aug. 1, 1911, to July 14, 1913, Commercial Agent, G.T. Pacific Ry., Regina, Sask.; July 14, 1913, to Apr. 16, 1914, Division Freight Agent, G.T. Pacific Ry., Edmonton, Alta.; Apr. 26, 1914, to Sept. 1, 1920, Commercial Agent, G.T.R., and Division Freight Agent, Grand Trunk Pacific Ry., Winnipeg.

Walter U. Appleton, who has been General Superintendent of Rolling Stock, Eastern Lines, Canadian National Ry., Moncton, N.B., was born there, Jan. 29, 1878, and entered railway service, Oct. 12, 1890, since when he has been, to Sept. 1895, junior clerk, Intercolonial Ry., Moncton; Sept. 1895 to May 1899, machinist apprentice, same road; 1900, clerk; 1901 to 1903, machinist; 1905 to 1909, chief clerk to Superintendent of Motive Power; 1909 to 1913, Assistant to Superintendent of Motive Power; 1913 to Feb. 1918, General Master Mechanic; Feb. to Dec. 1918, Superintendent of Motive Power, Canadian Government Ry., all at Moncton; Dec. 1918 to Sept. 15, 1920, Mechanical Superintendent, Eastern Lines, Canadian National Ry., Moncton.

John Henry Corcoran, who has been appointed General Travelling Agent, Canadian National Ry., Moncton, N.B., was born at Charlottetown, P.E.I., Sept. 18, 1874, and entered railway service in Oct. 1890, since when he has been, to Nov. 1892, clerk, locomotive house, Intercolonial Ry., Moncton, N.B.; Nov. 1892 to Aug. 1911, clerk, General Passenger Department, Intercolonial Ry., Moncton; Aug. 1911 to Aug. 1919, Travelling Passenger Agent, G.T.R., Moncton; Aug. 1919 to Aug. 1920, General Agent, Passenger Department, G.T.R., Moncton.

R. Creelman, whose appointment as Assistant Passenger Traffic Manager, Canadian National and Grand Trunk Pacific Ry., and Grand Trunk Pacific Coast Steamship Co., Winnipeg, was announced in our last issue, entered railway service Sept. 1891, since when he has been, to 1893, messenger, City Freight Agent's office, G.T.R., Toronto; 1893 to 1897, ticket clerk, G.T.R. city office, Toronto; 1897 to 1900, chief clerk, District Passenger Agent's office, G.T.R., Toronto; Jan. 1, 1900, to Aug. 1901, in General Passenger Agent's office, C.P.R., Winnipeg; Aug. 1901, to Sept. 1, 1903, in Passenger Traffic Department, Canadian Northern Ry., Winnipeg; Sept. 1, 1903, to July 1, 1906, City Ticket Agent, Northern Pacific Ry., Winnipeg; July 1, 1906, to July 1, 1909, Travelling Passenger Agent, Canadian Northern Ry., St. Paul, Minn.; July 1 to Oct. 1909, Commercial Agent, Canadian Northern Ry., St. Paul, Minn.; Oct. 1909 to Mar. 1, 1911, Assistant General Passenger Agent, Canadian Northern Ry., Winnipeg; Mar. 1, 1911, to Dec. 31, 1918, General Passenger Agent, Western Lines, Canadian Northern Ry., Winnipeg; Jan. 1, 1919, to Aug. 24, 1920, Assistant Passenger Traffic Manager, West-

ern Lines, Canadian National Ry., Winnipeg.

Howard Alexander Dixon, who has been appointed Chief Engineer, Western Lines, Canadian National Ry., and Grand Trunk Pacific Ry., Winnipeg, was born at Sand Hill, Ont., Oct. 7, 1878. Quebec Oriental Ry., Atlantic, Quebec & Western Ry.—C. A. STARK has been appointed Master Mechanic, vice R. Lindsay, resigned. Office, New Carlisle, Que.

The Car Shortage Situation.

The Railway Association of Canada issued the following circulars Sept. 17:

No. 9.—In times of shortage of equipment, to protect freight loading, it is necessary that railways apportion available equipment amongst shippers located on their lines, on an equitable basis. In this connection it should be borne in mind that industries making cars empty on their sidings are not entitled to any more favorable treatment than that accorded other shippers. In cases where a shipper makes empty a larger number of cars than he is entitled to, for loading on an equitable distribution basis, the railway shall call upon such shipper to turn back empty cars in excess of the number to which he is entitled, for other distribution.

No. 10.—The present acute car shortage makes it incumbent upon the railways to increase in every way possible, freight car efficiency. Shippers and consignees are being urged to load cars

promptly, and to capacity, to place their orders for carload lots, and release equipment promptly at destination. In this connection the attention of the railways is called to the importance of following out these suggestions to shippers and consignees in connection with the ordering and unloading of o.c.s. material, and it is recommended that the handling of o.c.s. material in revenue freight car equipment should be closely checked by the railways, with a view to avoiding waste of car capacity and reducing delays in unloading to the minimum.

Circular 8, Supplement 1.—In carrying out the requirements of circular 8, it is recommended that the following loading of 40 ton cars with flour be adhered to:—

1000 bushels	1000 bushels
1000 bushels	1000 bushels
1000 bushels	1000 bushels
1000 bushels	1000 bushels

Thirty ton cars can be loaded to capacity, viz., 66,000 lb.

Occupancy of Toronto New Union Station Offices.

Canadian Railway and Marine World for September stated that a number of Canadian National, Canadian Pacific and Grand Trunk Railways' officials would remove their offices to the new union station, Toronto, about Sept. 15. Owing to unforeseen delays, particularly in regard to the installation of telegraph and telephone service, the removals had to be postponed, and it is now expected that they will be effected early in October.

The names of the C.P.R. and G.T.R. officials who will remove were given in Canadian Railway and Marine World for September. The following Canadian National Rys. officials will also remove:—D. Crombie, General Superintendent; G. A. Hoag, Superintendent of Transportation; J. H. McAlpine, Master Mechanic; W. C. Moore, Assistant Master Mechanic; W. H. Long, General Car Foreman; G. P. McLaren, District Engineer; W. H. B. Bevan, Assistant Engineer; R. B. Jennings, Division Engineer; C. L. Harris, Superintendent; W. L. Buller, Assistant Superintendent; W. D. Marshall, Chief Dispatcher; O. Kerr, Bridge and Building Foreman; V. Davies, Boarding Car Supervisor.

It is expected that the Post Office Department will take possession of the eastern block early in October.

Change in Canadian Marconi Co.'s Control.

As a result of changes in the organization of The Marconi Wireless Telegraph Co. of Canada, Ltd., it is now entirely under Canadian control. Some months ago, a merger was effected in the United States between the American Marconi Co. and the General Electric Co.'s wireless interests, the merged interests being incorporated as Radio Corporation of America. As a result of that merger, the Radio Corporation became stronger than either of its constituents, separately, could ever have hoped to become, as it gained control of all the wireless patents of the American Marconi and General Electric Companies. As a side issue of that merger, the various Marconi interests of the British Empire, elsewhere than in Canada, became entitled to the use of all the wireless patents owned and controlled by the General Electric Co. Canada was not included, as the Canadian equivalents of

the wireless patent of the General Electric Co. were owned by the Canadian General Electric Co., which is not under the control of the General Electric Co.

By changes which have taken place recently in its organization, the Canadian Marconi Co. becomes affiliated with the Canadian General Electric Co. Senator Frederic Nicholls, Sir William Mackenzie and Mr. A. E. Dymont, directors of the Canadian General Electric Co., having been elected directors of the Canadian Marconi Co., the board of which is now constituted as follows:—Senator Frederic Nicholls, President; Senator G. Marconi, Vice President; A. E. Dymont, Vice President; R. Bickerdike, Vice President; Sir William Mackenzie, Godfrey C. Isaacs, G. M. Bosworth, C. Greenhields, K.C., A. H. Morse, A.M.I.E.E. (London), Mem. I.R.E. (New York), Managing Director. The authorized capital of the Canadian Marconi Co. will be increased to provide additional working capital and for the acquisition of the wireless patents controlled by the Canadian General Electric Co., which patents include those on the Alexanderson alternator, the manufacture of the Fleming valve, the Alexanderson multiple aerial, etc.

Canadian Ticket Agents' Association's Annual Meeting.

The Canadian Ticket Agents' Association held its 34th annual meeting and outing at Montreal, Sept. 22 and 23. At the annual meeting at the Windsor Hotel, Sept. 22, G. T. Bell, Passenger Traffic Manager, G.T.R.; W. S. Cookson, General Passenger Agent, G.T.R., and W. H. Snell, General Passenger Agent, C.P.R., addressed the members.

The curtailment of free transportation to ticket agents and their dependents was discussed at length, a committee reporting that under the railway act of 1919 it is illegal to extend free transportation to ticket agents not wholly employed in transportation business. A resolution was passed expressing sympathy with F. W. Churchill, for many years town ticket agent, C.P.R., Collingwood, Ont., who has resigned from membership owing to having lost his eyesight.

The officers were re-elected as follows: President, J. Ransford, Clinton, Ont.; First Vice President, J. A. McDonald, Valleyfield, Que.; Second Vice President, A. C. Roraback, North Bay, Ont.; Third Vice President, C. G. Millard, Coldwater, Ont.; Secretary-Treasurer, E. de la Hooke, London, Ont.; Auditor, W. E. Hall, Blenheim, Ont.; executive committee, W. Jackson, Clinton, Ont.; A. M. Hare, Tillsonburg, Ont.; C. B. James, Orillia, Ont.; W. J. Moffatt, Toronto; W. H. C. MacKay, St. John, N.B.

On the evening of Sept. 22 the members had a theater party. On Sept. 23, in the morning, they were taken over some of the Montreal Tramways Co.'s lines in a special car; in the afternoon they were given a motor ride around Mount Royal, and afterwards went on board the s.s. Saturnia, of the Anchor-donaldson Line, where they were welcomed by R. W. Reford, President; W. I. Gear, Vice President, and other officials of the agents, the Robert Reford Co. While the members were being entertained on board, they presented mementos of the outing to E. T. Boland, Manager, Robt. Reford Co., Toronto, and J. J. Brignall, Travelling Passenger Agent, C.P.R., Toronto.

Canadian National Railways Directors' Inspection Trip.

Between Sept. 16 and 27, D. B. Hanna, President, Canadian National Rys., made an inspection trip over some of the eastern lines, accompanied by the following other directors: A. P. Barnhill, K.C., Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Thos. Cantley, Robt. Hobson, Sir Hormidas Laporte, R. T. Riley and E. R. Wood. There were also in the party R. P. Ormby, Secretary; S. J. Hungerford, Assistant Vice President, and F. P. Brady, General Manager, Eastern Lines. Among other officials who travelled with the party, through their respective jurisdictions, were W. A. Kingsland, Assistant General Manager, Eastern Lines, and C. B. Brown, Chief Engineer, Moncton, N.B., and the local superintendents, etc.

The itinerary included Montreal, Quebec, McGivney Jct., Fredericton, St. John, N.B., Moncton, Sydney, Tormentine, Port Borden, Summerside, Charlottetown and Halifax.

At the principal points visited the railway properties were gone over. At St. John, N.B., special attention was paid the new yard area on Marsh Road, and to the harbor development and drydock work, being done in Courtenay Bay, by the St. John Drydock & Shipbuilding Co. The members of the party were entertained at luncheon at the Union Club, and afterwards went over the harbor on a tug. At Halifax, Mr. Hanna had conferences with delegations from the city council and board of trade.

Chief Interchange Car Inspectors' and Car Foremen's Association.

The Chief Interchange and Car Foremen's Association of America's annual meeting was held in Montreal, Sept. 14, 15 and 16. The association's object is the advancement of knowledge relating to safe and economical railway car interchange, to the construction and maintenance of cars in shops, to secure a fair and uniform understanding of the American Railway Association's rules on the general interchange situation, with international harmony, honesty and unity of action.

The members of the association were welcomed by representatives of the City Council. The meeting on Sept. 14 was devoted to a discussion of the A.R.A. Rules of Interchange with particular attention to the changes adopted at the June convention. This discussion was continued on Sept. 15, and at the conclusion a paper on the Transportation of Explosives was read by J. E. Grant of the Bureau of Explosives. An address on the same subject was given by J. O'Donnell, also representing the Bureau. The influence of the work of the car department on the elimination of loss and damage to freight was discussed by E. Arnold, Freight Claim Agent of the G. T.R.

Two papers were presented at the meeting on Sept. 15, the first on the Lubrication of Freight and Passenger Equipment, by M. J. O'Connor; the second on the Best Methods of Repairing Cars in Train Yards, by O. E. Sitterly. An interesting feature of this session was the showing of moving pictures illustrating proper and improper practices in designing and maintaining brake beams and brake shoes, prepared by the Chicago Railway Equipment Co. The

meeting on Sept. 16 was devoted to the reports of committees, the election of officers and miscellaneous business.

The following officers were elected:—President, Edward Pendleton, General Car Foreman, Chicago & Alton Ry., Peoria, Ill.; First Vice President, A. Armstrong, Chief Joint Car Interchange Inspector, Atlanta, Georgia; Second Vice President, W. F. Westfall, Special Inspector, New York Central Ry., Cleveland, Ohio; Secretary-Treasurer, W. R. Elliott, General Car Foreman, St. Louis, Mo., terminals. W. H. Sherman, Car Foreman, G.T.R., was elected a member of the Executive Committee.

The ladies who accompanied the delegates were entertained by Montreal railwaymen to drives around the city, and other festivities included a reception and dance and a theatre party.

The Rehabilitation of the Reid Newfoundland Co.'s Railway.

The Commission appointed by the Newfoundland Government under an act passed at the Legislature's last session has started work. Among the recommendations, according to a press report, affecting the operation of the railway already made, is one for an increase in passenger fares and freight rates, the percentage of which had not been fixed Sept. 16. The granting of passes, which it is stated had assumed "enormous proportions," is reported to have been abolished. To this regulation, it is said, there are to be no exceptions whatever, the privileges heretofore granted to members of Parliament and to most of the company's officials being abolished.

The Legislature last session voted \$1,000,000 to be immediately expended on the line and its equipment, which was appropriated as follows:—\$300,000 for purchase of fish plates to connect the rails, \$250,000 for additional terminal facilities at St. John's and Port aux Basques; and \$450,000 to be paid to the Reid Newfoundland Co. to buy 6 locomotives, 50 box cars and 50 flat cars. Orders are reported to have been given for 6 locomotives, and enquiries are said to have been made for cars.

Arrangements are reported to have been made for considerable expenditures at Port aux Basques, the work to include the rebuilding and enlargement of some of the existing structures. This is the port whence the Reid Newfoundland Co.'s steamers run to Sydney, N.S.; and the report adds that T. A. Hall, the Government's engineer, is visiting Canada to secure the co-operation of Canadian National Rys. officers for the improvement of terminal facilities at Sydney, which are said to be inadequate. Another report states that the Commission visited Port aux Basques recently to select a site for new freight sheds, that the sheds will extend from the present shed to the railway office, and provide for handling of express and baggage and the Customs work.

Provision, it is said, is being made for a new terminal for the south coast steamships at Argentia, with railway facilities. The present terminals are at Placentia, and the steamships serve Port aux Basques, Argentia and the inner bays on the south shore. Argentia is on a bay a short distance west of Placentia, and is open all the year round. The proposed new terminal will also be used by the Anglo-Newfoundland Development Co., and other pulp and paper exporters. (Aug., pg. 434.)

Commutation Fares to Beaches in Winnipeg District.

Various Chief Railway Commissioners in Canada have the following to say in reply to a complaint made by the Winnipeg Beach Association, Winnipeg, regarding an excessive increase in fares for passengers travelling between the City of Winnipeg and the summer resort of Winnipeg Beach and other points there. As depicted at the hearing, the matter turned on the question of the alleged excessive nature of commutation rates. It is also set out in the application that the condition on which the Board, as ordered in order 29,12, dated April 1, 1919, was not to apply to those which exist in connection with the summer residents at Winnipeg Beach, and that a special tariff should be put into effect for the summer residents of Winnipeg Beach and adjacent beaches.

Application was also launched on behalf of Matlock Beach, bearing out that Matlock has a large summer population, that the C.P.R. insisted upon campers resident at Matlock Beach purchasing commutation tickets to Winnipeg Beach, and that Matlock Beach has had commutation ticket privileges ever since the Beach was opened up as a summer colony; and the applicants claim that having had such privileges for over 12 years, if the Matlock rate is to be in accord with that fixed by order 29,512, then it should be based on the actual Matlock mileage; in other words, there should be a specific commutation rate for Matlock. As indicated below, the commutation rate which has applied to Matlock has been the Winnipeg Beach rate.

Winnipeg Beach is 49 miles from Winnipeg. The beaches mentioned at the hearing were Winnipeg Beach, Matlock Beach, Whytewold, Boundary Park, and Sandy Hook. Gimli, which is 59 miles from Winnipeg, was also referred to. Matlock and Whytewold are intermediate to Winnipeg Beach. Boundary Park and Sandy Hook are beyond Winnipeg Beach, Sandy Hook being the second station beyond. In addition, Ponemah and Dunnottar were mentioned. Ponemah is intermediate to Winnipeg Beach. Dunnottar is not shown in the company's timetable or folder. There are relatively short distances intervening between the points mentioned.

The tariffs have been checked and show commutation rates between Winnipeg and Winnipeg Beach and between Winnipeg and Gimli. The tariffs on file do not show commutation rates between Winnipeg and the other points mentioned. Apparently the traffic has been handled, so far as commutation traffic is concerned, by the passenger purchasing transportation either to Winnipeg Beach or Gimli in respect of the point intermediate to either of the commutation destinations aforesaid. The figures for 1919 passenger business as between Winnipeg and the points concerned show the following:—Excursion tickets, \$97,872; week-end tickets, \$9,634; commutation tickets, \$28,366; total, \$135,872. Of this business 72.04% was carried on excursion tickets, while 20.08% represents the commutation movement. There were issued in connection with the commutation traffic in question during 1919, 2,556 10-trip tickets and 338 55-trip tickets; a total of 2,894, therefore, the predominant type of commutation ticket is not one concerned with daily travel, but with less frequent movements which normally would appear to be of the week-end type.

The decision at the hearing turned primarily upon an alleged difference of conditions existing in connection with the traffic herein concerned and the traffic involved under order 29,512. Applicants submitted that the commutation rates had existed so long that they had been regarded as, so to speak, standard commutation rates. They stated that when the increase took place under the Fifteen Per Cent Case, which percentage increase applied to commutation rates as well, they had no objection to this, but that they objected to any further increase. It may be pointed out in this connection that the same condition existed in Eastern Canada; commutation rates had existed for a period of time, and under the Fifteen Per Cent Case they were subjected to a 15% increase.

It was argued that the traffic concerned in the Board's judgment in the Commutation Rates Case was related to an established suburban traffic, and that the consideration of this overshadowed the matter of summer traffic; and it was stated that in the case herein involved summer traffic was the predominant feature. It is to be pointed out that in the case of the complaint of the Gatineau Resident's Association against the C.P.R., which was dealt with in the judgment, what was concerned was the matter of summer traffic, there being no winter commutation rates on the Gatineau;—the commutation fares of summer residents on the Gatineau line are limited to the period beginning May 1 and ending Oct. 31 of each year; and the judgment in dealing with the rates specifically sets out detail regarding rates and mileages in connection with the summer traffic up the Gatineau river.

Reference was made to the volume of excursion traffic between Winnipeg and Winnipeg Beach as having a bearing upon the proper level of commutation rates, and as a matter to be considered in connection with the contention that a special commutation rate basis should be in place on the traffic in question—a rate basis distinct from and lower than that authorized in the Board's order above referred to. The typical commutation rate, it seems to me, is that concerned with the 55-trip ticket as it was, which was reduced under the Board's order to a 50-trip basis. This is concerned with a daily movement. On account of the limitation of time within which it has to be used, it has that element of assured frequency of movement which is a fundamental factor in connection with the granting of commutation rates. In the application dealt with in the judgment, which was implemented by the Board's order 29,512, this 55-trip ticket business, now 50-trip, played a very large part. In the case of the present applications, it is to be noted that it is of very minor importance.

The geographical situation of the different points as adjacent to Winnipeg Beach has been referred to. As already pointed out, these points, as distinct from Winnipeg Beach and Gimli, have not in the past carried specific commutation rates, and the tariffs now in force do not provide for them. It is contended that since the points involved are not being quoted commutation rates, proportioned to their respective mileages, they are being discriminated against. In the Board's judgment, the matter of discrimination was very fully considered by Commissioner Boyce. There were before

the Board applications to extend the commutation passenger fares to territory which did not have commutation rates. It was pointed out in the judgment that under The Railway Act, sec. 345, subsec. 2, "the duty is cast upon applicants to the discretion of the Board to make out such a case as will of itself induce the Board to see the fitness of granting the application by the strength of the case, and not merely by suggestion or statement as to the necessity of such a service." It was indicated that the object of the legislation as referred to was simply to give the Board a remedial power. The decision in the Commutation Rates Case did not require the installation of commutation rates at points at which at the time of the application commutation rates were not installed; and as pointed out in the various instances in which applications were made for the exercise of the Board's remedial powers, such a showing of discrimination was not made as would justify the Board's intervention.

The case as presented was concerned with two positions: (1) that the traffic conditions involved were dissimilar from those before the Board in its judgment on commutation rates; (2) the question of discrimination. In general, on the question of the nature of the traffic and of the earnings, taking into consideration the conditions as to railway costs which are referred to in Commissioner Boyce's judgment, and which are of general application, a case has not been made out for putting in such a special rate basis as asked for. As to the question of discrimination alleged, the matter falls within the reasoning and conclusions of Commissioner Boyce as above referred to. I am, therefore, of the opinion that the situation as developed is not one which on the facts before us is taken out from under the provisions of the Board's judgment in the Commutation Rates Case.

Commissioners Goodeve and Rutherford concurred.

Grand Trunk Railway Construction, Betterments, Etc.

Ottawa Office and Store Building.—A recent press report stated that a contract was about to be let for the erection of an office and store room at Ottawa.

London Reclamation Yard.—A press report states that plans are being prepared for the construction of three buildings at East London, Ont., for use in connection with a reclamation or salvaging yard, and that the total cost of the plant is put at \$300,000. It is also reported that one track from the St. Marys branch to the new yard has been laid, that the other track has been started, and that building supplies, etc., are in course of delivery for the general construction work.

Chinese Railway Club Ltd. has been incorporated under the British Columbia Companies Act, with authorized capital of \$2,000 and office at Prince George, to establish and maintain a club house.

Ties for Great Britain.—A press report states that orders for 20,000,000 ft. of railway ties for Great Britain and Ireland has been placed with the British Columbia Lumber Export Association.

Birthdays of Transportation Men in October.

Many happy returns of the day to:
A. Aitken, Assistant Superintendent, Toronto Terminals, C.P.R., Toronto, born at Decewsville, Ont., Oct. 12, 1872.

E. W. Beatty, K.C., President, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, Ottawa, Ont., born at Perth, Ont., Oct. 13, 1874.

L. S. Brown, General Superintendent, Maritime District, Canadian National Rys., Moncton, N.B., born at Nelson, N. B., Oct. 19, 1864.

F. F. Busted, Assistant Engineer, C. P.R., Vancouver, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, Sales Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1875.

C. E. Cartwright, ex-Division Engineer, C.P.R., Vancouver, B.C., born at Toronto, Oct. 13, 1864.

J. W. Corbett, Purchasing Agent, Canadian Government Merchant Marine Ltd., Montreal, born there, Oct. 4, 1887.

A. F. Dion, Traffic Manager, Quebec Harbor Commission, Quebec, born at L'Islet, Que., Oct. 1, 1871.

H. A. Dixon, Chief Engineer, Western Lines, Canadian National Rys., Winnipeg, born at Sand Hill, Ont., Oct. 7, 1878.

J. W. Doyle, General Manager, Cape Breton Ry., St. Peters, N.S., born at Summerside, P.E.I., Oct. 12, 1872.

L. V. Druce, Commercial Agent, Canadian National and Grand Trunk Pacific Rys., Edmonton, Alta., born at London, Eng., Oct. 20, 1873.

R. G. Edwards, Assistant Superintendent, Windsor Division, Ontario District, C.P.R., London, Ont., born at Maitland, Ont., Oct. 10, 1883.

A. C. Egan, Assistant to Comptroller, Canadian National Rys., Toronto, born at Winnipeg, Oct. 6, 1883.

C. E. Friend, Comptroller, Canadian National Rys., Toronto, born at Brighton, Eng., Oct. 12, 1871.

W. F. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at Detroit, Mich., Oct. 27, 1868.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Hull, Que., and Vice President, Canadian Electric Railway Association, born at Quebec, Que., Oct. 9, 1882.

C. N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born there, Oct. 8, 1872.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, born at Three Rivers, Que., Oct. 12, 1861.

O. M. Lavoie, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Cyril de Wendover, Que., Oct. 16, 1884.

A. E. McMaster, Treasurer, Whalen Pulp & Paper Mills Ltd., Vancouver, B.C., born at Perth, Ont., Oct. 22, 1885.

Sir William Mackenzie, President, Toronto Ry., Toronto, born at Kirkfield, Ont., Oct. 30, 1849.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta District, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. T. Marlow, General Freight Agent, Canadian Pacific Ocean Services, Ltd., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

C. R. Moore, General Superintendent of Car Service, G.T.R., Montreal, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at Johnstone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, ex-Chief Engineer, Hudson Bay Ry., Winnipeg, Man., born at Aberdeen, Scotland, Oct. 15, 1877.

T. F. Rahilly, ex-Superintendent, Algoma Eastern Ry., now of Sault Ste. Marie, Ont., born at Diorite, Mich., Oct. 6, 1892.

H. G. Reid, General Master Mechanic, Western Lines, Canadian National Rys., Winnipeg, born at Pembroke, Ont., Oct. 27, 1863.

W. S. Rollo, agent, G.T.R., St. Johns, Que., born at Dundee, Scotland, Oct. 8, 1852.

O. J. Rowe, Local Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at Binghamton, N.Y., Oct. 11, 1879.

J. K. Savage, General Superintendent, Quebec District, C.P.R., Montreal, born at Forreston, Ill., Oct. 5, 1876.

Right Hon. Lord Shaughnessy, K.C. V.O., Chairman, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Fuel Agent, Grand Trunk Pacific Ry., Winnipeg, born at Barking, Essex, Eng., Oct. 2, 1868.

C. E. Stockdale, Assistant to Vice President, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

D. A. Storey, ex-Freight Traffic Manager, Canadian Government Railways, Moncton, N.B., now of Kingston, Ont., born at Halifax, N.S., Oct. 26, 1853.

E. N. Todd, General Foreign Freight Agent, C.P.R., Montreal, born at Huntingdon, Que., Oct. 17, 1879.

J. H. Valleur, Secretary-Treasurer, Thousand Islands Ry. and Oshawa Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

J. A. Vallerand, Superintendent and General Freight and Passenger Agent, Roberval - Saguenay Ry., Chicoutimi, Que., born at Quebec, Que., Oct. 21, 1878.

R. Walton, Division Master Mechanic, Farnham Division, Quebec District, C.P.R., Farnham, Que., born at Peterborough, Ont., Oct. 16, 1880.

New Hotel for Montreal.—Arrangements are reported to have been completed for the formation of the Mount Royal Hotel Co., with \$10,000,000 authorized capital, to build a 1,000 room hotel in Montreal. The site of the old High School, in the block surrounded by Peel, Burnside and Metcalfe streets, just above St. Catherine St., is said to have been secured for the new building. Among those interested in the company are:—F. A. Dudley, President, United Hotels Co. of America; Hon. W. J. Shaughnessy, a C.P.R. director; H. G. Kelley, President, G.T.R.; Senator L. C. Webster, President, Webster Steamship Co. and Quebec Ry., Light & Power Co.; W. W. Butler, President, Canadian Car & Foundry Co.; A. D. MacTier, Vice President, Eastern Lines, C.P.R.

Traffic Orders by Board of Railway Commissioners.

Increases in Railway Freight and Passenger Rates.

General order 308, Sept. 9, general order 309, Sept. 9, and general order 310, Sept. 15, are given in full under "Increases authorized in Railway Freight and Passenger Rates" on pages 532 and 533 of this issue.

Reconsigning Rates and Penalty Charges.

General order 307, Sept. 1.—Re consigning rules and penalty charges for detention of equipment in interstate traffic passing through Canada, and general order 305, Aug. 19, 1920: It appearing that the Interstate Commerce Commission has suspended clause 2 of the emergency penalty charges authorized by its special permission 50,321, July 31, 1920, the clause reading as follows:—"On all open top cars, and on all cars loaded with coal or coke, not released within the free time as prescribed in the National Car Demurrage Rules, J. E. Fairbanks, I.C.C. no. 8, supplements thereto or reissues thereof, a storage charge of \$10 a car per day or fraction of a day will be made until car is released." It is ordered that general order 305 be amended accordingly.

Automobile Tire Chain Rates.

30,030. Aug. 17.—Re application of American Audit Co., Spokane, Wash., for a ruling as to the legal rate on automobile tire chains, in less than carloads, from Victoria Park, Ont., to Vancouver, B.C., on June 29, 1918, via rail, lake and rail: Upon hearing the application in Ottawa, on May 18, 1920, in the presence of counsel for the Canadian Pacific and Grand Trunk Railway, the Canadian Freight Association being represented at the hearing, and what was alleged; and upon reading the report of the Board's Chief Traffic Officer, it is declared that the rate applicable to automobile tire chains, in less than carloads, from Victoria Park, Ont., to Vancouver, B.C., on June 29, 1918, via rail, lake and rail, was the second class rate shown in Canadian Freight Association tariff 2-A, C.R.C. no. 10, effective April 20, 1918, viz., \$3.10 per 100 lb., in accordance with item 28, page 6, supplement 5 to Canadian Freight classification 16, reading as follows, viz., "Chains: automobile tire, in boxes or barrels, l.c.l., 2nd class."

Coal Shipments by Water to United States.

General order 312, Sept. 24.—Re question of coal supply in Canada: and an order amending general order 301, dated July 22, and the powers conferred upon the Board by chap. 66 of the Acts of Parliament of Canada, 1920. Upon its appearing to the Board that a permit system is essential to render more effective the intent and purpose of general order 301, and in pursuance of the powers conferred by the said Act, the Board doth order that the general order 301 be amended by the addition thereto of the following words, viz., "And in the case of each shipment by water to the United States an export permit must first be secured from this Board."

Hamilton's Railway Problems.—N. Cauchon, C.E., Ottawa, who is advising Hamilton, Ont., City Council on civic improvements in which the routes of the railways entering the city are involved, is reported to have had an interview with H. G. Kelley, President, G.T.R., who expressed his willingness to discuss the question.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Albert & Great Waterways Ry.—A report states that the Alberta Government has entered into an agreement with the Northern Construction Co., Ltd., H. A. G. & W. Ry. Co., Ltd., and the H. A. G. & W. Ry. Co., Ltd., to build a railway line from the Peace River to the Athabasca River, and to connect it with the Canadian Pacific Railway. The line is to be built in three sections, the first of which is to be built from the Peace River to the Athabasca River, and the second from the Athabasca River to the Canadian Pacific Railway. The third section is to be built from the Canadian Pacific Railway to the Athabasca River. The line is to be built in three sections, the first of which is to be built from the Peace River to the Athabasca River, and the second from the Athabasca River to the Canadian Pacific Railway. The third section is to be built from the Canadian Pacific Railway to the Athabasca River. The line is to be built in three sections, the first of which is to be built from the Peace River to the Athabasca River, and the second from the Athabasca River to the Canadian Pacific Railway. The third section is to be built from the Canadian Pacific Railway to the Athabasca River.

Atlantic, Quebec & Western Ry.—A report states that a bill has been introduced in the Quebec Legislature, which will give the Atlantic, Quebec & Western Railway Company the right to build a railway line from the city of Quebec to the city of Montreal, and to connect it with the Canadian Pacific Railway. The line is to be built in three sections, the first of which is to be built from the city of Quebec to the city of Montreal, and the second from the Montreal to the city of Ottawa, and the third from the Ottawa to the city of Toronto. The line is to be built in three sections, the first of which is to be built from the city of Quebec to the city of Montreal, and the second from the Montreal to the city of Ottawa, and the third from the Ottawa to the city of Toronto. The line is to be built in three sections, the first of which is to be built from the city of Quebec to the city of Montreal, and the second from the Montreal to the city of Ottawa, and the third from the Ottawa to the city of Toronto.

Poston & Maine Rd. The Board of Railway Commissioners has authorized the rebuilding of the overhead highway bridge No. 1 at mile 1.1 north of Smiths Mills station, Que. While Smiths Mills is mentioned in the order, the name of the station has been changed to Fontenab, and it is situated at mile 30 from Sherbrooke, Que., on the line to Newport, Me.

Burrard Inlet Tunnel & Bridge Co.—The following directors are reported to have been elected at the annual meeting at North Vancouver, B.C., Sept. 8:—Reeve E. H. Bridgeman, President; Mayor Vance, Vice President; J. Loutet, Alderman; Township, P. Ward, J. McNaught, Reeve Vinson, Mayor Gale, Alderman Woodside; Secretary-Treasurer, E. Cockrell. The shareholders are the cities of Vancouver and North Vancouver, and the adjoining municipalities, and the directors are their representatives. The company has a Dominion charter to build a bridge across the second narrows of Burrard Inlet, a tunnel and railway connecting with the trunk railways lines. (June, pg. 297.)

Canadian Niagara Bridge Co.—A recent press report stated that engineers were working from boats in the Niagara River, making test holes in the river bed for foundations for the proposed new bridge across the Niagara River near Grand Island. All the preliminary work on the United States side of the river is said to have been completed, and all the land necessary for the bridge and the railway approaches is said to have been secured. It is said the bridge will span the river from Black Rock to Grand Island on the Canadian side, and from Grand Island to near the Wickwire steel plant on the U.S. side of the river.

The Board of Railway Commissioners has approved a route map showing general location of the company's proposed bridge and railway from the International Boundary opposite Grand Island, on the Niagara River, to connect with the Michigan Central Rd., about 3.15 miles northeast of Welland, Ont. (July, pg. 359.)

Edmonton, Dunvegan & British Columbia Ry. In connection with the transfer of the Edmonton, Dunvegan & British Columbia Ry. and the Central Canada Ry. for operation, we have been officially advised that it is at present difficult to give any specific information as to the betterments required or proposed

to be undertaken. It is well known that, on account of financial conditions, the property is badly run down, and the first duty of the new management will be to catch up with arrears in the renewals; to make provision for sliding banks, along the Peace and Smoky Rivers; to surface and ballast the Grande Prairie branch; to erect suitable section houses and other buildings for the maintenance staff, and in a general way to bring the road up to ordinary railway branch line standard. Several contracts are reported to have been let for ties, steam shovels and ditching machines are reported to have been distributed along the line, and to be at work.

It is expected that the present terminal arrangements with the Grand Trunk Pacific Ry. at Edmonton, Alta., will be cancelled and that a new terminal arrangement will be made with the C.P.R. (May, pg. 255.)

Esquimalt & Nanaimo Ry.—Some matters of detail in connection with the construction of the bridge at Johnston St., Victoria, B.C., are before the Board of Railway Commissioners, and it is probable that they will be finally adjusted when the Commission sits at Victoria, Oct. 11. The bridge is being built by the city and the railway company. (Sept., pg. 189.)

Grand Trunk Ry.—A press report states that additional siding accommodation is about to be provided at Thorold, Ont., at an estimated cost of \$15,000.

A press report says that double tracking of Air Line Division from Bridgeburg to Windsor, Ont., under lease to the Wabash Ry., is under consideration, but that no work will be done on it until 1921 at the earliest.

Kettle Valley Ry.—A recent press report stated that good progress had been made with grading the line from Penttice to Dog Lake, B.C., and that the grading would be completed by the end of September. It is expected that track laying will be started immediately grading is completed. (Sept., pg. 489.)

Manitoba.—A press report states that the Manitoba Government is about to take steps for the construction of a railway into the northern Manitoba mineral belt. The explored mining area follows a chain of lakes and waterways from Lake Athapuskow east through Seist and Flin Flon Lakes to Herb Lake, about 90 miles. In part of the Lake Athapuskow district are large deposits of copper sulphide ore; in the Herb Lake region gold is the predominating mineral. (See Flin Flon Mining Proposition, June, pg. 297.)

Margaree Coal & Ry. Co.—The Nova Scotia Government has revoked the registration of the Margaree Coal & Ry. Co., which was incorporated some years ago under the Nova Scotia Companies Acts. An act was passed by the N.S. Legislature at the 1903-4 session incorporating the Margaree Coal & Ry. Co., to build a railway from the Chummy Corner mines, Inverness County, to Chummy Corner Cove, Margaree Harbor and Cheticamp, and from Margaree Harbor via Margaree River valley and Lake Ainslie to the projected Harbor & Gulf Ry. (if built) or if that railway was not built, the line was to be carried on to Orangedale on the Intercolonial Ry., and from Orangedale to Caribou Cove or Inhabitants Bay, near Point Tupper. The company was also authorized to build

branch lines. The line from Margaree to Cheticamp, the act provided, was not to be built if the Inverness Ry. & Coal Co. built its projected line from Broad Cove to Cheticamp. An agreement was entered into between the company and the Nova Scotia Government in 1907 for the construction of the line, and in 1910 the Dominion Parliament vote a subsidy at the usual rate and on the regular terms for building a line from Margaree to Chummy Corners, to Orangedale and to Caribou Cove, 50 miles, which subsidy was renewed in 1913. No construction has been done on the projected lines. (Aug., 1919, pg. 337.)

Nova Scotia Steel & Coal Co.—A press report states that the company has started construction on a spur line of two miles, from the existing line at Scotia no. 4 colliery to Banner Head, in connection with the opening up of a new colliery there, and that there is a probability of the line being extended three miles further to Point Acme colliery.

Pacific Great Eastern Ry.—The British Columbia Government, under an act passed last session of the Legislature, has sold \$3,000,000 of provincial bonds at 98.91, the proceeds of which will be utilized for construction on the P.G.E.R. The estimated cost of completing the line to Prince George, which is the immediate objective, is \$4,000,000, and the loan authorized was to make up that amount.

Track is laid to Deep Creek, the viaduct across which was expected to be completed by Sept. 30, and it is expected to have track laid from that point to Quesnel, and from Prince George to Quesnel. Work is being proceeded with from both ends by Dec. 31.

The question of the extension of the line from Prince George to a connection with the Edmonton, Dunvegan & British Columbia Ry. in the Peace River Valley, is reported to be again under consideration, and survey parties are reported to be in the field preparing route maps and reports as to the character of the territory to be opened up.

A press report recently stated that A. F. Proctor, Chief Engineer of the B.C. Railway Department, expected that an additional 84 miles of track on the P.G.E.R. would be handed over by the contractors to the operating department during September. This additional mileage will give the railway a line from Squamish to Deep Creek, 294 miles.

A. B. Buckworth, the recently appointed General Manager, is reported to have completed his first official trip of inspection over the line Aug. 17, and to have said that rapid progress was being made with the viaduct at Deep Creek.

Pacific Great Eastern Ry.—The Premier of British Columbia returned recently to Victoria after a trip of inspection over this railway under construction to Prince George and a visit to the Peace River country and Edmonton, Alta. Settlers in the Peace River country urged the construction of the line from Prince George to a junction with the Edmonton, Dunvegan & British Columbia Ry. at the interprovincial boundary. The B.C. Government has the matter under consideration.

A recent press report stated that freight trains would be operated through from Squamish to Williams Lake by Sept. 15. (July, pg. 386.)

Pere Marquette Rd.—A recent press report stated that the Sarnia, Ont.,

Chamber of Commerce was about to take up with the Pere Marquette Rd. Co. the question of the provision of larger and more modern terminal facilities there.

Porcupine-Rand Belt Electric Ry. Co. was incorporated by the Ontario Legislature in 1912 to build a railway to be operated by steam, electricity or any other motive power from the eastern boundary of Ontario in McGarry Tp., westerly to Larder City, through other townships to Dane, crossing the Timiskaming & Northern Ontario Ry., and on to the headquarters of the Montreal River, and to the eastern shore of the Matagami River at Kenogamessie Lake, and to connect at various points with the T. & N. O. Ry. and to build branch lines. After some attempts had been made to arrange for the building of the line by the original company, the charter is reported to have passed under the control of the Associated Goldfields Mining Co., Ltd., which has large interests in the Kirkland Lake mining district. This company is reported to have been interested in the endeavor, referred to elsewhere in this issue, to induce the Ontario Government to build a branch of the T. & N. O. Ry. from Swastika to the Kirkland area. The government, before deciding as to the construction of the suggested line, desired to make an independent investigation of the mining areas to be served, but failing to secure the Associated Goldfields Mining Co.'s cooperation in the matter, decided not to build.

G. A. Mackay, President A. G. M. Co., wrote the Ontario Minister of Mines July 27 as follows:—"In pursuance of our conversation of today, and our interview with the Premier a few days ago, I have taken up the matter with the directors of Associated Goldfields Mining Co., and those of the Porcupine-Rand Belt Ry., which charter, as you know, this company owns. It was originally our directors' opinion that our transportation needs would be served more quickly if our company were to build its own line of railway, and at the same time we would be able to locate it at such points as would serve our interests best, and it was only with the idea of serving as many of the other deserving operators in the district as possible that the course of the road was more or less diverted to the Kirkland Lake-Swastika route. It is our directors' opinion that only a very comprehensive investigation of our ore bodies would be fair to the province, and figuring all the assistance which we would be able to give the men in charge, this investigation would still entail several months time. Coupling this with the fact that the Kirkland Lake-Swastika route would be more than twice as long, our directors feel that our requirements could be more speedily served by the company constructing its own line of railway from at or near Boston Creek to Larder Lake. Presuming from our conversation that your government has no objection to our following this course, we have decided to send our engineers at once over the short route and give us facts and figures as to the cost of this line." (Nov., 1916, pg. 460.)

Queens County Ry.—The Nova Scotia Government has revoked the registration of the Queens County Ry. Co., incorporated under the Nova Scotia Companies Acts. The Nova Scotia Legislature passed an act in 1909 incorporating the Queens County Ry. Co., to take over the railway, switches, etc., of the Sable Lumber Co. from Wilkins Siding, Queens County, to the Sable Lumber Co.'s lands

and to extend the railways on these lands and to buy or build a railway or tramway from between Liverpool and Shelburne, on the Halifax & Southwestern Ry. to the limits. (June, 1912, pg. 302.)

St. George, Nfld., Coal Areas.—A press report states that the Newfoundland Railway Commission visited the St. George coalfields at Robinsons recently and looked over the route for the proposed railway therefrom to the sea. (April, pg. 176.)

Sydney & Louisburg Ry.—The Dominion Coal Co., which owns the Sydney & Louisburg Ry., has deposited with the Dominion Minister of Public Works under the Navigable Waters Protection Act, a description of the site and plans of repairs to the rest pier and ice protection work in connection with the swing

span of the railway bridge over the Nura River, Cape Breton County, N.S., and has applied for leave to build the same. W. C. Richey, Sydney, is the company's Engineer of Maintenance and Way. (Mar., pg. 137.)

Timiskaming & Northern Ontario Ry. A press report of Sept. 6 stated that the Kirkland Lake district mine owners had been advised by the Ontario Minister of Mines that the Government had decided not to build a spur line from the Timiskaming & Northern Ontario Ay. at Swastika to serve the Kirkland and Larder Lake mining areas. The mine owners are reported to be very much dissatisfied with the communication and are said to be considering a proposition to build a line for themselves. (See also Porcupine-Rand Belt Line Ry.)

Canadian Pacific Railway Construction, Betterments, Etc.

St. John Bridge.—The St. John, N.B., City Council was advised Aug. 30 that some members of the Board of Railway Commissioners expected to be in the city during the third week in September in connection with the erection of the new C.P.R. bridge at the reversible falls, St. John River.

Timiskaming-Ville Marie-Des Quinze Falls line.—A press report states that an early start upon the extension of the Timiskaming-Kippawa line, along the east shores of Lake Timiskaming to Ville Marie, and on the Des Quinze Falls is looked for. Surveys for the uncompleted portion of the line to the Falls are reported to have been completed.

Chalk River Subdivision.—The Board of Railway Commissioners has authorized the company to rebuild bridge 32.7, Chalk River Subdivision, Quebec District.

Port McNicoll Subdivision.—The Board of Railway Commissioners has authorized the company to fill in bridge 58.2, Port McNicoll Subdivision, Trenton Division, Ont.

Windsor Improvements.—A press report of Sept. 21 stated that the Board of Railway Commissioners had under consideration the question of the closing of a street in Windsor, Ont., in connection with the projected yard improvements there, and that until this was settled work was being held up.

North Bay Subdivision.—The Board of Railway Commissioners has approved plan of proposed alterations to masonry to suit new reinforced concrete span crossing highway at bridge 21.12, North Bay Subdivision, Algoma District, Ont.

Cartier Subdivision.—The Board of Railway Commissioners has authorized the replacing of the present 60 ft. deck plate girder bridge at mile 38.92, Cartier Subdivision, Ont., by two 32 ft. reinforced concrete spans.

Jack Pine River Bridge.—The Board of Railway Commissioners has authorized the company to rebuild bridge 46.4 over Jack Pine River, Nipigon Subdivision, Alameda District, Ont.

For William Coaling Plant.—Work is reported about to be started on an extension of the company's coal handling facilities at Island 1, Fort William, Ont. About 6,000 piles are to be driven in connection with the work, which will include the laying out of a new dumping ground. S. McKenzie is reported to be the contractor for the piling work.

Amulet to Dunkirk Branch.—The Board

of Railway Commissioners has approved route map showing location of branch line from Amulet to Dunkirk, Sask., mile 0, in Tp. 7, Range 21, to mile 60.2, in Tp. 12, Range 28, west 2nd meridian.

Asquith to Cloan Branch.—The Board of Railway Commissioners has approved of route map showing location of branch line Asquith to Cloan, from Tp. 36, Range 10, to Tp. 42, Range 20, west 3rd meridian, mile 0 to 84.2. Asquith is on the line from Saskatoon to Wilkie, and Cloan is on the line from Wilkie to Cutknife, Sask.

Rosetown Southeasterly Branch.—The Board of Railway Commissioners has approved route map showing general location of the branch from Rosetown southeasterly to Keppel, Sask., mile 0, in Tp. 30, Range 15, to mile 37.2, in Tp. 2, Range 13, west 3rd meridian.

Lanigan Northeasterly Branch.—The Board of Railway Commissioners has authorized the building of the branch, under construction from Lanigan, Sask., across 23 highways between miles 47.8 and 84.32.

Kelfield Southeasterly.—The Board of Railway Commissioners has approved route map of the Kelfield southeasterly branch from Tp. 34, Range 29, to Tp. 32, Range 14, west 3rd meridian, mile 0 to 35.9. Kelfield, Sask., is the present terminus of a branch line from Wilkie, southeasterly, and it is proposed to extend it to a connection with the line running from Hawarden to Macklin at or near Anelia, Sask. The route map mentioned above covers the entire mileage of the extension.

Kipp Northeasterly Branch.—The Board of Railway Commissioners has approved of route map showing general location of the Kipp, Alta., northeasterly branch, mile 0 to 39.70.

Empress to Milden Line.—The Board of Railway Commissioners has approved revised location of the Bassano easterly branch, mile 169.85 to 172.75, on the Empress-Milden, Alta., section of the line, and has authorized the crossing of certain road allowances. (Sept., pg. 483.)

G.T.R. Apprentices Win Prizes.—Of six prizes awarded at the Canadian National Exhibition, Toronto, recently, for mechanical drawing, five were given to apprentices in G.T.R. shops, viz., G. Dutaub, and L. Inquire, Montreal; A. Capper and W. Grandison, Stratford, Ont., and D. Lamont, Ottawa.

Canadian National Railways Construction, Betterments, Etc.

Cape Breton Land-Links.—The Cape Breton Land-Links, the proposed line between Cape Breton and the mainland, is now being surveyed by the Canadian National Railway. It is reported that the line will be surveyed out at a cost of \$1,000,000. The line will connect the Cape Breton Peninsula with the mainland at Point St. Charles, and that two trains were shown of the line. The line will be surveyed out at a cost of \$1,000,000. The line will connect the Cape Breton Peninsula with the mainland at Point St. Charles, and that two trains were shown of the line.

Petitecodiac River bridge superstructure.—We are officially advised that the superstructure for the new bridge 1/4 across the Petitecodiac River on the Albert Subdivision from Salisbury, N.S., described in Canadian Railway and Marine World for Sept. 10, p. 484, will be erected by the railway forces.

St. John Elevator.—Tenders were received to Sept. 12 for the manufacture, delivery and installation of a dust conveyor system for the grain elevator at St. John, N.S.

St. John Freight Yards.—A press report states that good progress has been made with enlarging the freight yards at St. John, N.B.

St. John Union Station Shed.—Considerable progress is reported to have been made with the erection of butterfly roofs at the Union Station, St. John, N.B.

Morin Heights, Que.—The Board of Railway Commissioners has ordered the building of a station at Morin Heights, Que.

Mount Royal Tunnel & Terminal Co.—The Board of Railway Commissioners has authorized the connecting of this company's tracks near Montreal with the Jacques Cartier Union Ry. This will establish a physical connection between the Canadian National Rys. terminals in Montreal and the Grand Trunk Ry.

Moirs River Bridge.—The Board of Railway Commissioners has authorized the rebuilding of the bridge over the Moirs River in Madoc Tp., at mile 76.84 from Picton, Ont., and also the improvement of the grade there.

Thunder Bay District.—The Board of Railway Commissioners has authorized the rebuilding of bridge over Blackwater River, Thunder Bay District, mile 21.4 from Jellicoe, Ont.

Tie Contracts.—Tenders were received to Sept. 25 for the supply of 1,500,000 ties to be made and delivered between Dec. 1, 1920, and Nov. 1, 1921, as follows:—900,000 on the Grand Trunk Pacific Ry. in British Columbia; 200,000 on the G.T.P.R. in Alberta, and 400,000 on the National Transcontinental Ry. in Manitoba and Ontario between Winnipeg and Sioux Lookout.

Marchand, Man.—The Board of Railway Commissioners has approved location and plans for a station at Marchand, to be completed by Nov. 15.

Regina.—The Regina, Sask., City Council is reported to have approved an application for the erection of a spur track to the west side of Albert St.

Prince Albert-Paddock Wood Branch. The Board of Railway Commissioners has approved route map of the branch line under construction from Prince Albert, Sask., northeasterly, mile 0 to Paddock Wood, Sask., Oct. 27.

Swift Current-Gravelbourg Line.—The

President of the Swift Current, Sask., Board of Trade is reported to have received a telegram from D. B. Hanna, President, C.N.R., stating that it is intended to lay track on a further distance of 18 miles on this line during this year if the necessary labor can be obtained.

Junkins, Alta.—The Board of Railway Commissioners has approved of plans of proposed additions to the station grounds at Junkins, 4 miles westerly of Lobstick Jet., on the main line between Edmonton and Vancouver.

Kamloops - Vernon - Lumby - Kelowna Branch.—The Board of Railway Commissioners has approved of plans, profiles and books of reference of revised location through Tp. 19, Range 14, and Tp. 19, Range 15, B.C.; through lots 297 and 296, Kamloops Division, Yale District, B.C., and through Tp. 18, Range 14, west 6th meridian, and D. L. 442, G.I., Kamloops Division, Yale District. The right of way in the latter case is limited in certain places to 100 ft. wide except in certain specified places.

The Board of Railway Commissioners has approved plans showing revised locations on this branch as follows:—From mile 27 to 28, from mile 31.5, and from mile 44.7 to 46.11, all east of Kamloops Jet., B.C., and has also authorized the building of the line across Shuswap Ave., B.C.

British Columbia Buildings.—Tenders are reported to be under consideration for the erection of workmen's cottages and two cinder hoist foundations at Blue River and Boston Bar respectively; a freight shed and platforms at Kamloops; section houses at Birch Island and Matsqui; concrete retaining walls, culverts, etc., at Boston Bar and Port Mann, B.C.

False Creek Sea Wall Litigation.—A press report of Sept. 15 stated that the dispute between Champion & White and the Canadian Northern Ry. as to the construction of the sea wall at the False Creek reclamation works, Vancouver, had been settled by the payment of \$100,000 by the Canadian National Rys. Champion & White are reported to have received \$60,000, and A. B. Creelman, Ltd., the contractors, \$40,000. (Sept., pg. 484.)

Railway Car Manufacturers Association Convention.—The annual convention of the Railway Car Manufacturers Association of United States was held in Montreal Sept. 17 and 18. The association's annual dinner was held at the National Club Sept. 17, at which there were a number of speakers, including D. B. Hanna, President Canadian National Rys. The members made a trip of inspection to the Angus shops of the C.P.R., Sept. 18, going by special train, in charge of W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., and subsequently were guests at a luncheon given by the Canadian Car Builders' Association, W. W. Butler, President, Canadian Car & Foundry Co., presiding.

Saskatchewan Recouped for G.T.P.R. Guarantees.—A Regina press dispatch says that the protracted negotiations between the Dominion and Saskatchewan Governments for the refund of money advanced by it to meet the interest falling due on provincially guaranteed bonds of the Grand Trunk Pacific Ry. have been completed by the Dominion Government paying the province \$362,252.

Chamber of Commerce Delegates' Tour of Ontario and Quebec.

The delegates to the Ninth Congress of Chambers of Commerce of the British Empire, which met in Toronto during the fourth week in September, left Toronto Sept. 24 on a tour of Ontario and Quebec, travelling over Canadian National, Canadian Pacific, Grand Trunk, Timiskaming and Northern Ontario Railways. The trip was scheduled to occupy seventeen days and to give them an opportunity of inspecting the agricultural, industrial and mining regions of the two provinces. For the information of the delegates the four railways interested in the movement had prepared a handsome book descriptive of the route to be traversed. On the cover, in black and gold, are coats of arms of the various commonwealths and dependencies of the British Empire represented at the congress. The book is profusely illustrated, the scenic beauties and industrial enterprises of the provinces being features. The foreword of the book gives a resume of the resources of the two provinces and each center of importance on the 2,500 miles of railway embraced in the trip. Accompanying the book is a map showing the natural resources, transportation and trade routes of the whole of Canada. The delegates will be able to take away with them in this book a very complete and accurate synopsis of what Ontario and Quebec offer to the investor, manufacturer and the settler.

Freight and Passenger Traffic Notes.

The Canadian National Rys. have announced a large number of changes in train service, taking effect Oct. 3.

The Montreal Harbor Commissioners will not accept shipments of explosives, export or inland, which will have to be handled over any portion of its railway.

The Canada Steamship Lines on Sept. 20 carried about 30,000 baskets of fruit from the Niagara district to Toronto, its average during the later part of September being about 25,000 baskets a day.

The Grand Trunk Ry. is reported, owing to the increasing number of thefts of freight in transit, to be about to increase its police force on the line between Montreal and Toronto. The headquarters of the extra force will, it is said, be at Brockville, Ont.

Owing to a proclamation of the Mayor of Toronto abandoning daylight saving time at midnight, Sept. 12, the C.P.R., the G.T.R. and the Canadian National Rys., which had some trains running on daylight saving time in and out of Toronto, for the convenience of business people, restored them to standard time. All other trains running on daylight time will be restored to standard time on Sunday, Oct. 3, when the daylight saving plan will have been abandoned for the year.

The Board of Railway Commissioners will hold sittings in the west as follows: Winnipeg, Man., Sept. 28; Saskatoon, Sask., Sept. 29; Edmonton, Alta., Oct. 1; Prince George, B.C., Oct. 4; Prince Rupert, B.C., Oct. 6; Victoria, B.C., Oct. 11; Vancouver, B.C., Oct. 12; Nelson, B.C., Oct. 18; Calgary, Alta., Oct. 20; Medicine Hat, Alta., Oct. 22; Regina, Sask., Oct. 23; Winnipeg, Man., Oct. 25; Port Arthur, Ont., Oct. 27.

Railway Rolling Stock Orders and Deliveries.

The Timiskaming & Northern Ontario Ry. is in the market for 4 Pacific type locomotives.

The C.P.R., between Aug. 15 and Sept. 16, received 3 passenger locomotives and 8 vans from its Angus shops, Montreal. The C.P.R. has ordered 15 Mikado (2-8-2) locomotives from Montreal Locomotive Works.

The Reid Newfoundland Co. has ordered 200 trucks from Canadian Car & Foundry Co., for delivery in November.

The Pacific Great Eastern Ry. has received 2 Mikado locomotives from Canadian Locomotive Co., completing an order for 3, details of which were given in Canadian Railway and Marine World for February, page 126.

Canadian Car & Foundry Co., between Aug. 14 and Sept. 14, made the following deliveries:—126 Hart-Otis ballast cars and 124 box cars from Montreal works, and 43 cabooses from Amherst works, to Canadian National Rys.; 7 tank cars to Imperial Oil Ltd.; and 22 air dump cars to Greater Winnipeg Water District Ry.

Canadian National Rys. has received the following rolling stock to Sept. 15:—from Canadian Car & Foundry Co., 13 observation, buffet compartment sleeping cars, completing an order for 18, 87 box cars out of an order for 1,000, and 79 cabooses out of an order for 80; from Eastern Car Co., 629 general service cars, out of an order for 1,150; from Hart Otis Car Co., 182 ballast cars, out of an order for 350; from Preston Car & Coach Co., 5 cabooses out of an order for 20; from Canadian Locomotive Co., 20 switching locomotives out of an order for 30.

The Singer Manufacturing Co. has ordered one 4 wheel locomotive (0-4-0) from Montreal Locomotive Works. Following are the chief details:—

Weight	79,000 lb.
Wheel base	15 ft. 6 in.
Cylinders, diat. and stroke	14 x 22 in.
Wheel diat.	40 in.
Journals	7 x 8 in.
Boiler, type	Straight top
Boiler, diat. inside first ring	45 in.
Boiler pressure	190 lb.
Firebox, length and width	46 1/2 x 50 1/2 in.
Tubes, no. and diat.	112 x 2 in.
Heating surface, tubes	680 sq. ft.
Heating surface, firebox	70 sq. ft.
Heating surface, total	750 sq. ft.
Grate area	16.2 sq. ft.
Factor of adhesion	17,400 lb.
Reverse gear	Hand lever
Cab	Wood
Valve gear	Stephenson
Tender, type	Saddle
Water capacity	1,700 gal.
Fuel capacity	1,600 lb.

La Moleunee Estate (Boos & Co.) has ordered three 4-coupled (0-4-2) locomotives from Montreal Locomotive Works. Following are the chief details:—

Weight on drivers	36,000 lb.
Weight on trailer	6,000 lb.
Weight, total	42,000 lb.
Wheel base, driving	14 ft. 9 in.
Cylinders, diat. and stroke	11 x 16 in.
Driving wheel, diat.	33 1/2 in.
Driving journals, main	5 x 6 in.
Driving journals, others	4 x 5 in.
Trailer wheel, diat.	34 1/2 x 6 in.
Boiler, type	Straight top
Boiler, diat. inside first ring	38 in.
Boiler pressure	85 in.
Firebox, length and width	40 3/16 x 32 1/2 in.
Tubes, no. and diat.	267 sq. ft.
Heating surface, tubes	41 sq. ft.
Heating surface, total	408 sq. ft.
Grate area	9.3 sq. ft.
Tractive power	8,100 lb.
Factor of adhesion	14
Reverse gear	Hand lever
Cab	Wood
Tank, type	Saddle
Water capacity	700 lb.
Fuel	400 gal.
Fuel capacity	400 gal.

The Algoma Eastern Ry., as stated in our last issue, has ordered two consolidation (2-8-0) locomotives from Montreal Locomotive Works. Following are the chief details:—

Weight on drivers	216,500 lb.
Weight on truck	25,000 lb.
Weight, total	241,500 lb.
Wheel base, driving	15 ft. 10 in.
Cylinders, diat. and stroke	23 1/2 x 30 in.
Driving wheels, diat.	57 in.
Driving journals, main	10 1/2 x 21 in.
Driving journals, others	10 x 14 in.
Truck wheels, diat.	30 in.
Truck wheel journals	6 1/2 x 12 in.
Boiler, type	Extended wagon top
Boiler, diat. inside first ring	72 7/8 in.
Boiler pressure	200 lb.
Firebox, length and width	109 x 64 1/2 in.
Tubes, no. and diat.	208 x 2 in.
Heating surface, tubes	31 1/2 sq. ft.
Heating surface, firebox	1,588 sq. ft.
Heating surface, total	1,619 1/2 sq. ft.
Grate area	49 sq. ft.
Tractive power	49,500 lb.
Factor of adhesion	4.37
Superheater, Locomotive Superheater Co.	2
Reverse gear	Rimzonnet
Cab	Vestibule type
Tender frame	Steel channels
Tender wheel, diat.	38 in.
Tender truck type	C. N. standard pedestal
Tender journals	5 1/2 x 10 in.
Tank, type	Water bottom
Water capacity	6,600 imp. gal.
Fuel capacity	4 tons

The Cordoba Central Ry., Argentine, has ordered 15 Mikado (2-8-2) locomotives from Montreal Locomotive Works. Following are the chief details:—

Weight on drivers	121,500 lb.
Weight on truck	15,000 lb.
Weight on trailer	23,500 lb.
Weight, total	160,000 lb.
Wheel base, driving	13 ft. 6 in.
Cylinders, diat. and stroke	21 1/2 x 24 in.
Driving wheel, diat.	48 in.
Driving journals, main	9 x 9 in.
Driving journals, others	8 x 9 in.
Trailer wheel, diat.	31 in.
Trailer wheel journals	5 1/2 x 12 in.
Truck wheel diat.	31 in.
Truck wheel journals	5 1/2 x 9 in.
Boiler, type	Straight top, Belpaire
Boiler, diat. inside first ring	65 in.
Boiler pressure	180 lb.
Firebox, length and width	81 1/2 x 63 1/2 in.
Tubes, no. and diat.	27 5/8 in.
Heating surface, tubes	1,458 sq. ft.
Heating surface, firebox	147 sq. ft.
Heating surface, total	1,605 sq. ft.
Superheating surface	570 sq. ft.
Grate area	45.6 sq. ft.
Tractive power	27,730 lb.
Factor of adhesion	4.38
Superheater, Locomotive Superheater Co.	4
Reverse gear	Hand lever
Cab	Steel plate
Valve gear	Walschaert
Tender wheel, diat.	38 in.
Tender truck, type	Equalizer
Tender journals	5 1/2 x 10 in.
Tank type	Water bottom
Water capacity	5,400 gal.
Fuel	Wood
Fuel capacity	4 cords

Railway Lands Patented.—Letters patent were issued during August for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Northern Ry.	Acres. 719.68
Canadian Pacific Ry. grants	2,860.20
Canadian Pacific Ry. roadbed and station grounds	4.65
Grand Trunk Pacific Ry.	35.30
Total	3,619.83

A Valuable Car Load.—C.P.R. hopper freight car 240,000 is reported to have been carried from the Rothwell district, Man., to Fort William, Ont., recently, 250,000 bush. wheat, valued at \$7,150.

A locomotive appliance is said to have been invented that will record the speed made by a locomotive at each point in a run, where it stops, and how long and where it has reversed.

Grand Trunk Railway Arbitrators' Inspection of Properties.

The board of arbitrators appointed to decide the price to be paid by the Dominion Government for certain of the G.T.R. Co.'s stocks, Sir Walter Cassells, Judge of the Exchequer Court, chairman; Sir Thomas White, representing the Government and W. H. Taft, ex-President of the United States, representing the company, left Montreal Sept. 30, to inspect the G.T.R. and G.T. Pacific Ry.'s properties. They are accompanied by H. G. Kelley, President, G.T.R.; J. B. Berry, Valuation Engineer, G.T.R.; A. W. Atwater, K.C., and F. H. Phippen, K.C., of the G.T.R. counsel. Some other G.T.R. officials went along as far as Chicago. The Government's representatives on the train are E. L. Newcombe, Deputy Minister of Justice; and R. A. C. Henry, Valuation Engineer, G.T.R. The special train comprises Pullman private car Colonial; two business cars, Ottawa and Quinte; Pullman compartment car, cafe parlor car and baggage car, one car being specially reserved for the arbitrators' use, one for President Kelley and his officials, and one for the Government representatives, so that private conferences may be held en route.

President Kelley is reported to have said in an interview, just before starting:—"The object of the journey is to give the members of the arbitration board as intimate an idea as possible of the properties and condition of the G.T. R. System. It is being undertaken at the request of the G.T.R. The arbitrators will be shown all that is possible of the properties; they will be able to study for themselves at first hand the physical condition of the lines, and will learn much of the geographical condition. A number of railway, technical and other experts are being taken, so that whatever information the board requires may be given at once. The board is going to look into conditions as closely as possible, and undoubtedly it will call for the execution of a great deal of very hard work. In addition to the railway lines, the G.T. Pacific Coast Steamship Co.'s line will be thoroughly examined, that being part of the properties of the company to be taken over by the Government."

From Montreal the party proceeded to Toronto, Hamilton, Niagara Falls, London, Sarnia and Chicago, stopping at those places, and at other points, to inspect terminal and other facilities. From Chicago they went to Winnipeg, leaving there for Prince Rupert and intending to be back in Montreal during October. It start holding sittings about the middle is probable that the arbitrators will of November.

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division during August, and for 12 months ended Aug. 20, 1920 and 1920, respectively:—

	12 mos. 12 mos.	Aug. to Aug. to
	1920.	1920. 31, 1920 31, 1919
Canadian National Rys.	1,284	54,328 51,182
Canadian Pacific Ry.	2,058	73,848 70,203
Grand Trunk Pacific Ry.	199	20,280 15,811
Great Northern Ry. (Duluth)	29	696 1,025
Totals	3,570	149,271 15,311

Orders by the Board of Railway Commissioners for Canada.

30.034. Aug. 21. Authorizing Canadian National Ry. to build bridge over C.P.R. at Hamilton, Ont.

30.035. Aug. 24. Authorizing G.T.R. to build spur for British American Oil Co., Hamilton, Ont.

30.036. Aug. 24. Authorizing C.P.R. to build spur for Ontario Lumber Co., Hamilton, Ont.

30.037. Aug. 26. Authorizing G.T.R. to use bridge 221, District 4, Montreal Division, over stream on Lot 27, southwest concession of St. Regis, Que.

30.038. Aug. 26. Authorizing Canadian Northern Western Ry. until Sept. 1, 1921, to carry traffic over its Hanna-Medicine Hat Branch from Hinar, mile 256.9 from Saskatoon, to mile 47, Hanna Subdivision, Canadian National Ry., Alta.

30.039. Aug. 24. Approving Edmonton, Dunroan & British Columbia Ry. bylaw 14 authorizing the District Freight Agent and the District Passenger Agent to prepare and issue tariffs of tolls to be charged for carriage of freight and passenger traffic.

30.040. Aug. 26. Authorizing G.T.R. to remove automobile from crossing of Main St., Duncan, Ont.

30.041. Aug. 24. Authorizing G.T.R. to build extension to siding for Swift Canadian Co., Ottawa, Ont.

30.042. Aug. 27. Authorizing Alberta Public Works Department to make highway crossing over of R.R. in section 2, Township 19, Range 26, sheet 4th meridian.

30.043. Aug. 31. Authorizing Grand Trunk Pacific Ry. to build wharf in block E, Prince Rupert, B.C.

30.044. Aug. 26. Authorizing C.P.R. to build bridge 327, Chalk River Subdivision, Quebec Division.

30.045. Aug. 25. Authorizing C.P.R. to build spur for Quaker Oats Co., Saskatoon, Sask.

30.046. Aug. 21. Ordering G.T.R. to provide protection at Garrison Road crossing, Bertie Tp., Ont.

30.047. Aug. 28. Approving agreement between Bell Telephone Co. and Chapleau Rural Telephone Co.

30.048. Aug. 31. Extending for 12 months time limit for which plans for Caneon Co. roads may be made.

30.049. Aug. 28. Authorizing City of Port William, Ont., to operate its electric railway cars on the C.P.R. tracks, subject to the following conditions: A. The cars shall not exceed 14 ft. in height.

30.050. Aug. 30. Ordering Canadian National Ry. to build culvert under Y about 410 ft. east of R.R. allowance between Secs. 28 and 29, Tp. 6, Range 2, sheet 1st meridian.

30.051. Aug. 26. Authorizing Canadian National Ry. to build bridge over Price River & Co., Metcalfe, Ontario, Que.

30.052. Aug. 26. Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co., C.N.R. to build bridge over Grandview Cut at Lushesford Street, Vancouver, B.C.

Superintendents of Transportation Appointed on Canadian National Railways.

The Canadian National Railways has made a separation by creating the office of superintendent of transportation, the intention being to have one for each principal superintendent's district. The duties of the superintendents of transportation are to supervise transportation on the district generally; receive from the superintendent of car service, all car service orders and transmit them to district officers concerned; distribute cars between various divisions of the district and generally supervise car supply on the district; distribute locomotives between divisions (master mechanic to select the individual locomotives of each class involved); see that freight trains and cars are properly loaded, check up overtime and delays and be responsible for the economical operation of train service generally; prepare and distribute working time tables; arrange for special passenger trains; supervise the examination of train and locomotive men in connection with vision and hearing, also knowledge of train rules, and brakes, car heating and lighting, etc., and perform such other duties as the general superintendent may specify from time to time.

The following appointments of superintendents of transportation have been made up to date:—J. J. Sunderland, heretofore Superintendent, Montreal Division, C.N.R., Montreal, appointed at Quebec, for Quebec District.

G. A. Hoag, heretofore Superintendent, Nipissing Division, C.N.R., appointed at Toronto, for Ontario District.

T. P. White, heretofore Superintendent for Car Service, Grand Trunk Pacific Ry., Winnipeg, appointed at Winnipeg for Central District, C.N.R. and G.T.P.R.

W. A. Kirkpatrick, heretofore Trainmaster, C.N.R., Neepawa, Man., appointed at Saskatoon, Sask., for Prairie District, C.N.R. and G.T.P.R.

C. H. Brown, heretofore Assistant Superintendent, Grand Trunk Pacific Ry., Edmonton, Alta., appointed at Edmonton, for Western District, C.N.R. and G.T.P.R.

C. F. Martin, heretofore Operating Inspector, C.N.R., Winnipeg, has been appointed at Vancouver, for Grand Trunk Pacific Ry. from Edmonton to Edson, Alta., and C.N.R. and G.T.P.R. west of Edson, including Vancouver Island lines.

C.P.R. British Information Bureau. — The recently organized information bureau, in London, Eng., established by the C.P.R., was formally opened during August by Sir George McLaren Brown, European General Manager. The office is in charge of Major Duan Moore, and any information relative to Canada will be supplied. Attached to the office is an extensive library, containing books of reference relating to Canadian and general literature.

Esquimalt & Nanaimo Ry. Lands. — Judgment was given recently in the British Columbia High Court in favor of the Esquimalt & Nanaimo Ry. Co. in its suit against Wilson, McKenzie and others, respecting the title to certain coal lands within the area granted by the Crown to the company. Stay of execution, pending appeal, was granted Sept. 6, the appellants to pay into court \$75,000 as security, with permission to mine 100,000 tons, such tonnage not to be exceeded without a court order.

Telegraph, Telephone and Cable Matters.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, has had his jurisdiction extended over the Grand Trunk Pacific Ry. telegraph lines.

H. Hulatt, Manager of Telegraphs, G. T.R. System and G. T. Pacific Ry., and Consulting Manager of Telegraphs, G.T. R. Western Lines, was elected Chairman of the American Railroad Association's Telegraph and Telephone Division, at its annual meeting in Winnipeg, Sept. 25.

The Great North Western Telegraph Co. has opened offices at Dufort, Norue Bay, Oskalanea, and Perthuis, Que.; Agnone, Kabina, Melbourne, Moonbeam, Smoky Falls, Thedford and Willett, Ont.; east Selkirk, Man.; Ardill, Eaton and Valparaiso, Sask.; and Eckville, Legal and Norfolk, Alta.; and has closed its offices at Kamouraska and Martin River, Que.; Elmira, Forrester's Falls, Osogode Station, Ragged Rapids, Springfield and Thornbury, Ont. The names of its offices at Moffat, N.B., and Crony, Ont., have been changed to Tide Head and Cameron Falls, respectively.

The American Railroad Association's Telegraph and Telephone Division held its annual meetings at the Fort Garry Hotel, Winnipeg, Sept. 22 to 24, the first day's sessions being opened by the Mayor of Winnipeg and D. C. Coleman, Vice President, Western Lines, C.P.R., the second day's sessions by A. E. Warren, General Manager, Western Lines, Canadian National Rys., and Grand Trunk Pacific Ry., and W. P. Hinton, Vice President, Grand Trunk Pacific Ry. Co. and Consulting Officer to the Receiver, G.T. P.R. The principal speaker at a dinner

held on Sept. 23 was Sir James Aikins, Lieutenant Governor of Manitoba, and for several years local counsel, C.P.R.

The Board of Railway Commissioners passed order 30,063, Sept. 3, approving the Marconi Wireless Telegraph Co.'s conditions governing the acceptance of messages for the United Kingdom routed via Marconi. It is provided that unless otherwise stated a message sent is to be an unrepeatable one, and if a repeated one, an extra charge of quarter the rate will be made. The company and its connections are absolved from liability for mistakes or delays in transmission or delivery, and for non delivery of unrepeatable messages beyond the amount of tolls collected for transmission, and also from liability for delay or none delivery of a repeated message beyond 50 times the amount collected for repeating, and for delays arising from unavoidable interruptions in the service, and from errors in cipher or obscure messages. No responsibility attaches to the company concerning any message until it is accepted at the transmission office, and if the company's messenger's are used for this purpose they act in that capacity as agents of the sender. Claims for damages or statutory penalties must be presented to the company within 60 days after the message is filed for transmission, or the company's liability ceases.

Among the Express Companies.

The Interstate Commerce Commission, according to a Washington, D.C., press dispatch of Sept. 21, has authorized an additional increase of 13.5% in express rates, instead of 15% as applied for. The increases, which apply to class and commodity rates, except on cream and milk,

make a total increase of 26% granted within the last few months.

The hearing of the Express Traffic Association of Canada's application on behalf of express companies operating in the Dominion, for 40% increase in rates, came before the Board of Railway Commissioners, Sept. 2, at Toronto, and hearings are being held at other points. The companies concerned include the Dominion, Canadian, National Central Canada, British American, and the American Railway Express Cos. The application states that the companies are operating on less than 61½% of what the Board declared to be a fair and reasonable tariff in 1913, and that with an increase of over 100% in operating costs, the companies have been granted an increase of less than 23%. The Dominion Ex. Co. states it had a deficit on operation of \$2,817,209.99 from July 1, 1913, to Mar. 31, 1920, the years 1916 and 1917 being the only two years which showed a profit, and 1919 being the worst year in the company's history, the deficit being \$2,086,657.83. The Canadian Ex. Co. states that during 1919, to Aug. 31, its expenses, including taxes, were \$3,933,270, its revenue for the same period being \$3,859,270, and to have operated at a loss since 1917, the deficits being: 1917, \$38,650; 1918, \$96,026; 1919, to Aug. 31, \$73,809; Sept. 1, 1919, to May 31, 1920, \$119,972.

Canadian National Express Company.

A regular express office has been opened at Deepdale, Man., and offices have been opened at Bears Pass, Ont., and Ardill, Sask., and the office at Ragged Rapids, Ont., has been closed.

The office at Forrester's Falls, Ont., has been reopened and the offices at Georgetown and Acton, Ont., have been discontinued, the company's service having been withdrawn entirely.

Dominion Express Company.

D. Chenevert, for 16 years agent at Three Rivers, Que., has resigned.

T. C. Matchett, agent at Lindsay, Ont., died there Sept. 24, aged 64, following a paralytic stroke.

A. Roussel has been appointed agent at Riviere-du-Loup, Que., vice J. E. Gagnon, transferred.

The Brotherhood of Dominion Express Employees, Toronto, had a moonlight excursion recently, with dancing and music.

J. Stark has been appointed agent at Fernie, B.C., vice J. P. Lowe, who has been appointed agent at Cranbrook, B.C.

Penticton and Sicomous Jet, B.C., have been made exclusive officers, with W. E. Davis and W. F. Stewart as agents respectively.

N. J. Bower, heretofore cashier, London, Ont., has been transferred to Windsor, Ont., vice F. Rods, transferred to London, Ont.

J. E. Gagnon, heretofore agent at Riviere-du-Loup, Que., has been appointed agent at Three Rivers, Que., vice D. Chenevert, resigned.

The Dominion Ex. Co. reports that the fruit traffic from Ontario to the Maritime provinces has been heavier this year than during the past 8 or 10 years.

The Netherlands Government is reported to have contracted with the Krupps at Essen, Germany, for 37 locomotives for railways in Java.

The Railway Y. M. C. A.'s of North American will hold an international conference at Richmond, Virginia, Nov. 18 to 21.

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

Electric Railway Department

Increases in Electric Railway Passenger Fares.

Cape Breton Electric Co., as stated in a recent Bulletin, and Marine World for the past year and a half in operation, after the completion of the Nova Scotia Public Utilities Commission's report, a new and improved fare system was adopted. The new fare system is as follows: North Sydney and Sydney Mines, and on its suburban line to Glace Bay. The company made its application to the Commission on May 22 for power to charge increased fares, and the Commission's order was made Aug. 15. The new fare system is operative Aug. 15.

On May 15, 1919, a statement of fare was made. The company paid a total of \$780,000 for the year. The fare system is as follows: each fare in the City of Sydney, and the Towns of North Sydney, Sydney Mines and Glace Bay, and on each zone of the interurban line from Sydney to Glace Bay. Tickets are sold 2 for 15c., and in even multiples of 2 at the same rate, each ticket being accepted in lieu of a single 10c. cash fare. On the Friday previous to Aug. 15 the company announced that it would continue to use the old tickets, selling them at the old rate as long as they lasted. We are advised that although the company never had more than about 7,500 outstanding up to that time, over 20,000 were sold within a few hours, and as not more than 10 tickets were sold to any one person, they were widely distributed.

The Public Utilities Commission's order directs the sale of tickets at the rate of 10 for 40c., to children under 16 years of age, upon production of a certificate from the school principal that they are bona fide pupils, such tickets being available only between 8 a.m. and 5 p.m. on regular public school days.

Fort William Municipal Ry.—On Sept. 1, under the Ontario Railway and Municipal Board's authority, the cash fare on the municipally owned electric railways in Fort William and Port Arthur were increased to 7c., four tickets being sold for 25c. Fares on the interurban line connecting the two cities is reported to have been increased in accordance with the new rate in the cities.

London St. Ry.—In connection with the increased fare and increased wages matters which have been fruitful of much agitation for months past, the Mayor of London, Ont., is reported to have stated recently that no bylaw increasing fares on the railways will be passed by the council this year for ratification by the ratepayers.

Port Arthur Civic Ry.—See Fort William Municipal Ry.

Saskatoon Municipal Ry.—A press report states that the Saskatoon, Sask., City Council passed a resolution, Sept. 13, authorizing the charging of a 10c. fare, with 4 tickets for 25c., on the municipal railway, the new fares to go into effect Oct. 1, and that 8 tickets for 25c. will continue to be sold to school children.

Winnipeg Electric Ry.—As stated in Canadian Railway and Marine World for Sept. 1920, the Manitoba Public Utilities Commission gave judgment Aug. 23 on the Winnipeg Electric Ry., the Winnipeg, Selkirk & Lake Winnipeg Electric Ry., and the Suburban Rapid Transit Co.'s

application for power to charge increased fares. The judgment is a very lengthy one, reviewing the whole circumstances of the investigation since the filing of the application by the Winnipeg Electric Ry. in Oct., 1918, which was followed by that of the W., S. & L. W. E. Ry. Co. in Dec., 1918, and by the S. R. T. Co. in Sept., 1919. Following the presentation of the W. E. Ry. Co.'s application a temporary increase of rates was granted, the old and the new temporary rates being as follows:

Old Fare	Old Temporary	New Temporary
Men's tickets, limited.....	8 for 25c.	6 for 25c.
Women's tickets, limited.....	8 for 25c.	6 for 25c.
Children's tickets, limited.....	10 for 25c.	10 for 25c.

A temporary increase of fares was granted to the Suburban Rapid Transit

return is not a difficult one to settle. To ensure continuance of a satisfactory service the rate must be such as will be attractive to investors, for the business is one that constantly requires additional capital. In my judgment, 8% is the proper rate to fix." The increased fares granted on the W. E. Ry. are estimated to produce sufficient to pay operating expenses, an 8% return on the above mentioned valuation, and leave a surplus of \$71,868, which the Commissioner says is "a reasonable sum in the circumstances."

As to the Winnipeg, Selkirk & Lake Winnipeg Electric Ry., the judgment said: Operating costs are estimated at \$145,320.00. A return of 6% on a capital of \$1,095,870.47 amounts to \$65,760.20. Total, \$211,080.00. The estimate of returns from increased fares is based only on the percentage of increase of the total receipts, and amounts to \$211,184. The rate of return on this section of line will be not over 6%.

In the case of the Suburban Rapid Transit Co., the judgment said:—Operating costs are estimated at \$131,608. A return of 7.7% on a capital of \$388,350.83 amounts to \$29,902. Total, \$161,510. The estimate of receipts from the increased fares is \$161,950. Yielding a return of less than 8%, with no margin for surplus.

The Commissioner fixed the fares on the Winnipeg Electric Ry., as follows:—Cash fare, 7c.; tickets, 4 for 25c.; children's tickets, 7 for 25c. These fares are within the present city limits, and to the following places outside the city limits: To Deer Lodge, and to the loop past the entrance to Assiniboine Park; to Templeton Ave., West Kildonan; to John Black Church, East Kildonan; to Berrydale Ave., St. Vital; to the end of the present line, known as the Morse Park extension. The East Kildonan line is divided into 2 zones, and the St. Norbert line into 4 zones, the cash fare of each zone being 5c., tickets good for one fare. 25 for 7c., and for children under 16 years, for the purpose of attending school on school days only, half the regular cash fare. In the company's advertisements announcing the change of fare, school children's tickets are quoted 10 for 25c.

On the Suburban Rapid Transit Co.'s line the cash fare is 5c. a zone; tickets good for one zone, 6 for 25c., or 25 for \$1; school children, half cash fare. The company in this case also offers to issue tickets at 10 for 25c. The Headingley line is divided into 5 zones, and the Charleswood line into 2 zones.

On the Winnipeg, Selkirk & Lake Winnipeg Ry. the fare from Winnipeg to Selkirk and Winnipeg to Stonewall is raised from 50c. single and 80c. return to 75c. single and 90c. return. The company is authorized to sell accommodation tickets, in books of 20, at the rate of 10 tickets the single fare, with a maximum of \$6; to issue students' tickets to students under 18 attending school, in books of 30 tickets at the same price as the regular commutation fare; children between 5 and 12 to be carried at one-half of the regular fare.

The new rates went into effect Sept. 1, the company redeeming all outstanding tickets issued under the old rates.

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutchinson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem. A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.;

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co.; and James

Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

Co. in Oct., 1919, the single cash fare being increased to 6c., with 5 tickets for 30c., and 9 for 50c., good at all hours; workmen's limited tickets, 5 for 25c., and school children's limited tickets, for 25c.

In reference to the City of Winnipeg's questioning of his jurisdiction, the Commissioner, after discussing the matter in its various aspects, said: "This Commission feels fully justified in continuing its course of altering rates, even though fixed by contract, where the public interest requires it."

The Commissioner had a valuation made of the company's property to ascertain a sum which would be equitable, as between the shareholders and the patrons of the railway, to consider as the amount of capital investment in the enterprise. These valuations as given in the judgment were:—

W. E. Ry. Co.	\$1,095,870.47
W., S. & L. W. E. Ry. Co.	\$388,350.83
S. R. T. Co.	\$131,608.00

Upon the question of the rate of return, the judgment said:—"The rate of

The acting City Solicitor, in a lengthy communication to the Winnipeg City Council, upon the order, criticized it in detail, and suggested points upon which it might be advisable to appeal. The council authorized an appeal, and a press report of Sept. 18 stated that an attempt would likely be made to have all the matters between the city and the municipalities and the company settled by special legislation at the Manitoba Legislature's next session.

Chief Justice Perdue, on Sept. 21, granted the Winnipeg City Council, and the councils of other interested municipalities, leave to appeal against the Public Utilities Commission's judgment. The appeal will, it is said, be confined entirely to the question as to whether or not the Commissioner had jurisdiction to make the order granting the increase. The question as to whether the Public Utilities Act is constitutional or not cannot be brought up.

Improvements in Winnipeg Electric Railway Co.'s Properties.

The Manitoba Public Utilities Commission's decision authorizing the Winnipeg Electric Ry. Co. and its subsidiary companies to increase their passenger fares, which is dealt with fully on another page of this issue, is another success for the vigorous and persistent effort to put the company on its feet which has been made by A. W. McLimont, now Vice President, since he took charge of the property as General Manager in Oct., 1917. The success achieved can best be gauged by contrasting conditions now with what obtained in 1917, when jitneys were on the streets, making inroads into the company's revenues to the extent of \$1,000,000 a year and street car fares were the same as provided in the original franchise, average 3.85c. a revenue passenger. Public opinion towards the company was not of the friendliest, and labor troubles were a continuous threat. In the winter of 1917-1918 Mr. McLimont conducted a campaign against the jitneys, which resulted in their complete elimination from the streets in April, 1918. Incidentally he accomplished reforms in the matter of service, such as the inauguration of the skip-stop system, re-routing, and other improvements, which resulted in the revenue per car mile being increased very appreciably.

Four months after the elimination of the jitneys the company applied for increased fares. An interim increase was granted. The Public Utilities Commission decided to make an appraisal of the company's property in order to fix a fare "which will produce revenue sufficient to cover operating costs and ensure a fair return being paid those whose money is in the property." In Oct., 1919, while the appraisal was still being made, the company was granted an increase to 6c. cash fares and also an increase in the rate for tickets. Now comes the 7c. fare, with the elimination of all but two classes of tickets and the assurance from the Commissioner that these fares will be sufficient to permit adequate service being given, keep the road in first class condition and provide a return of 8%.

Starting in the spring of 1918, Mr. McLimont embarked on a programme to rehabilitate the rolling stock. Much progress has been made in this regard, the cars being equipped with new motors, front and rear exits, and other improvements which make for more economical operation. Forty new cars have been

bought, 30 of which are in operation. Approximately \$1,000,000 has been applied to this rehabilitation programme during the past three years.

The Winnipeg Electric Ry. Co. also operates the gas utility in Winnipeg, and two increases in the price of gas have been granted since Mr. McLimont took charge, the last increase of 25c. a 1,000 cu. ft. having been authorized Aug. 23.

Operation of One-Man Cars in St. Thomas.

The Board of Railway Commissioners passed order 29,876, July 13, authorizing the City of St. Thomas, Ont., to operate p.a.y.e. one-man cars of its street railway over the London & Port Stanley Ry. on Elm St., for three months from date of order, the city, at its own expense, to erect a semaphore in the angle of the crossing, with a single arm and light, arranged so that it will stand normally clear for the London & Port Stanley Ry. and against the St. Thomas St. Ry.; and that, before street cars proceed over the crossing, the car operator shall stop his car 30 ft. clear of the nearest rail of the London & Port Stanley Ry. and go forward and set the signal against that line, then take his car across, stop it again the same distance (30 ft.) clear, and restore the signal to its normal position before leaving.

The Board also passed an order on the same day authorizing the city to operate similar cars over the Pere Marquette Ry. on Wilson Ave., provided that in addition to the watchman employed at the crossing by the Pere Marquette Ry., the city, at its own expense, provide a watchman between 6 and 12 p.m., or until such time as it ceases operating its cars.

Quebec Railway, Light, Heat & Power Co.'s Annual Report, Etc.

The following report for the year ended June 30 was presented at the annual meeting in Montreal recently:—The gross earnings from operation for the year were \$2,372,034.69, an increase of \$294,413.26. The operating and maintenance expenses were \$1,769,563.41, an increase of \$325,047.33, leaving the net earnings from operation \$602,471.28, a decrease of \$30,634.07. After adding miscellaneous income and deducting fixed charges, taxes and depreciation for equipment placed out of service, there remains a deficit of \$44,703.75. The balance at credit of surplus account on June 30, 1919, was \$682,464.29, and after charging the deficit above mentioned, together with \$55,555.70 in connection with recent Privy Council judgment, there remained a balance at credit of surplus account at June 30, 1920, of \$582,704.84.

During the year 9 new p.a.y.e. double truck latest type cars were added to the rolling stock of the city street railway department, the operation of which have given great satisfaction to the travelling public. One more car of the same type was placed in service during this year, completing order placed for 10 cars.

The Lotbiniere & Megantic Ry., operating between Lyster, Megantic County, and St. Jean Deschailons, Lotbiniere County, and which connects with the G.T.R. at Lyster and Canadian National Rys. at Villeroi, was acquired by the Dominion Government, and its operation was taken over by Canadian National Rys., effective April 1, 1920.

Extensive alterations and improve-

ments of the intake and the installation of new steel head gates at the main dam on the Montmorency River, were carried out during the year, the results of which, when completed, will prove most satisfactory in the operations of the power division. There was expended during the year on capital account \$266,818.38, which included the extension of the city street railway on Beaufort Road to the city limits, also 9 new double truck cars above referred to.

The President is reported to have stated at the meeting that negotiations were in progress for the disposal of the Quebec and Montmorency line. In addition to an electric car passenger service over this line, the company operates a freight service with steam locomotives.

The directors and officers were re-elected as follows:—Hon. Lorne C. Webster, President; Hon. D. O. L'Esperance, Vice President; Hon. A. Lavigne, T. J. Stewart, M.P., P. Galibert, L. J. Tarte, J. N. Green-shields, K.C., C. G. Green-shields, K.C., A. Picard, Hon. Jules Tessier and Brig-Gen. A. E. Labelle. W. J. Lynch was re-appointed General Manager, and Arthur LaMoine, Secretary.

Electric Railway Employees' Wages, Working Conditions, Etc.

Hull Electric Co.—Under the agreement between the company and its employees, which expired July 1, motormen and conductors were paid from 34c. to 41c. an hour, according to length of service. The new agreement asked for by the men provided for an all round rate of 65c. an hour. Failing a settlement, the men asked for a board of conciliation, which was authorized, the board consisting of G. D. Kelley, Ottawa, representing the company; Jos. Gibbons, Toronto, representing the men, and W. P. Grant as chairman. The board opened its sittings at Hull, Que., Aug. 3. G. Gordon Gale, Vice President and General Manager, appeared for the company. A majority report was signed by W. P. Grant and G. D. Kelley Aug. 26, recommending the following wages per hour for passenger motormen and conductors:

First six months	41c.
Second six months	44c.
Second year	46c.
Third year and thereafter	48c.
Listed spare men reporting for duty three times each day to be paid a minimum of \$30 a half month, but if they work in excess of the hours to cover this amount they to be paid at the schedule rate per hour.	
Freight crews, 10 hour day, per hour:	
Conductors	52c.
Motormen	52c.
Brakemen	45c.
Trolley men	41c.

The report recommended that these rates be paid from July 1, and that they continue in force for a year from that date. A minority report was presented by Jos. Gibbons, recommending the following wages per hour:

Passenger car men:	
First six months	45c.
Second six months	48c.
Second year	50c.
Third year men	52c.
Freight crew:	
Motormen and conductors	56 1/2c.
Brakemen	47c.
Trolley men	45c.

The majority report recommended increases to other employees, but not to the same extent as did the minority report. The percentage of increases granted in the majority report varied from 17% to 26%. The majority report was accepted by the company and its employees after some discussion, and a new agreement for the year July 1, 1920, to June 30, 1921, was made accordingly.

United States Electric Railway Mail Pay.

An act of the U.S. Congress, approved July 2, 1918, 40 Stat., 742, 748, contains the following provision: "That the Interstate Commerce Commission is hereby empowered and directed as soon as practicable to fix and determine from time to time the fair and reasonable rates and compensation for the transportation of mail matter by urban and interurban electric railway common carriers and the service connected therewith, prescribing the method or methods by weight or space, or both, or otherwise, for ascertaining such rate or compensation and to publish the same, and orders so made and published shall continue in force until changed by the Commission after due notice and hearing; and provided further, that it shall be unlawful for any urban or interurban electric railroad to refuse to perform mail service at the rates or methods of compensation thus provided for such service when required by the Postmaster General so to do, and for such refusal shall be fined \$100. Each day of refusal shall constitute a separate offense."

The Interstate Commerce Commission proceeded to carry out the directions given in the act. The electrically operated railways of the country were served with notice, and hearings were had at Washington, D.C., and at 16 important elec-

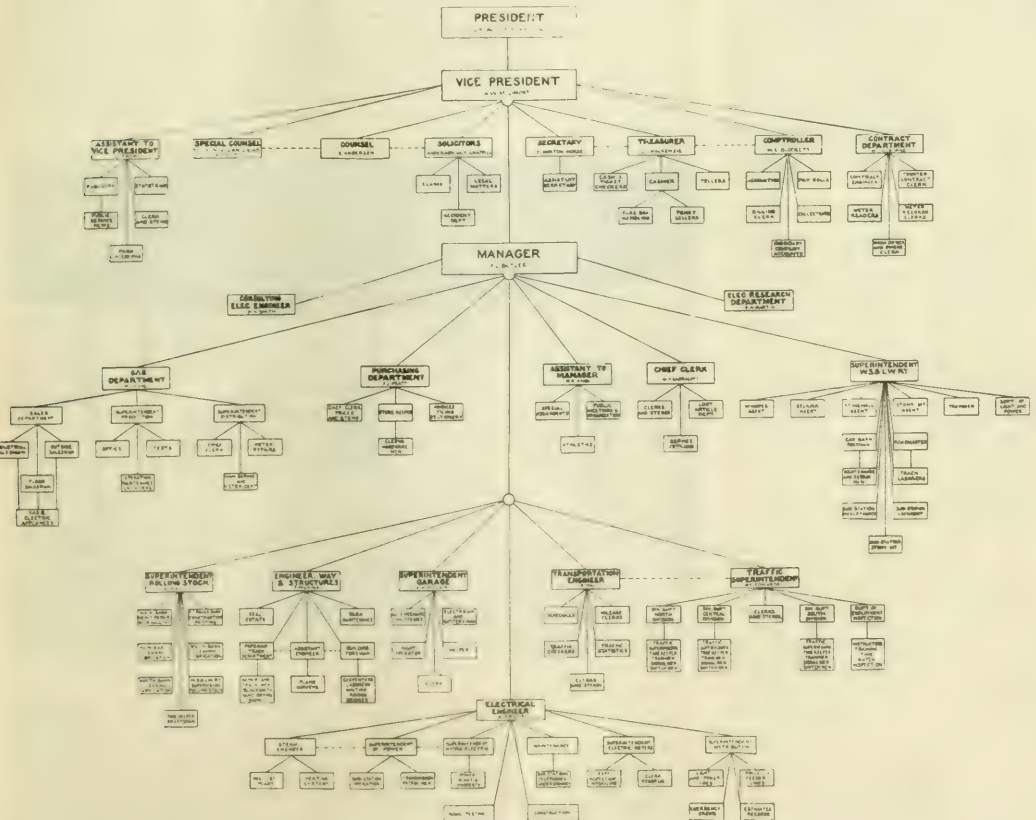

tric railway centers in different parts of the country. Evidence was submitted in behalf of the railways and the Post Office Department. Briefs were submitted and the case orally argued. The case was decided by the Commission on Aug. 17, the report being prepared by Commissioner McChord and the following order was passed the same day:—This case having been initiated under the provisions of the act of July 2, 1918, Stat. 742, 748; and having been duly heard and submitted by the parties, and full investigation of the matters and things involved having been had, and the Commission having, on the date hereof, made and filed a report containing its findings of fact and conclusions thereon, which said report is hereby referred to and made a part hereof, it is ordered that the following system, rules, and ratings be established on or before Dec. 6, 1920, and be observed, maintained, and applied to the transportation of mail matter of the United States by all urban and interurban electric railway common carriers subject to the act of July 2, 1918, supra, until further order or orders of this Commission:

1. That the fair and reasonable rate for transportation of closed-pouch mail on a car constructed and run primarily for passenger service, with no separate

compartment for mail, baggage, and express, is 4c. a mile of authorized car run for 10, or less than 10, pouches, sacks, and parcels. Where more than 10 pouches, sacks, and parcels are regularly tendered for transportation on one such passenger car, at any point on a mail route, the Postmaster General shall authorize not less than 60 cu. ft. of space and the fair and reasonable rate therefor is 5c. a mile of authorized car run; and for each additional 30 cu. ft. or fraction thereof, 1c. a mile of authorized car run, over said mail route; the authorization to be determined by actual measurement where practicable, or by count of pouches, sacks, and parcels as provided in paragraph 7.

2. That the fair and reasonable rate for closed-pouch mail service in baggage or express cars or in baggage and express compartments in passenger cars, is 3c. a mile of authorized car run for 30 cu. ft. of space or less, and 1c. a mile of authorized car run for each additional 30 cu. ft. or fraction thereof of space authorized; the authorization to be determined by actual measurement where practicable, or by count of pouches, sacks and parcels as provided in paragraph 7.

3. That the fair and reasonable rate for independent cars devoted to the transportation of the mails, on which railroad

employees handle the mails in this is about equal with the authorized travel in cars or apartments in cars 20 ft. or less in length, inside measurement, and in cars or apartments in cars more than 20 ft. in length, inside measurement, for the first 20 ft. and $\frac{1}{4}$ c. a lin. ft. for the additional per foot of authorized travel for each additional foot or fraction thereof.

4. That the fair and reasonable rate for railway postoffice work and the way

place pertaining the service, based on the time actually consumed, and the same in the statement plus 3% shall constitute the basis of payment for the each operating year, unless in special cases, and for good cause, the Postmaster General may require further statements and verification from any particular railway company at other periods of the year.

7. That from time to time, as often as he may deem it necessary, and at least once in two years, the Postmaster Gen-

One-Man Car, of which 25 have been put in operation on Toronto Civic Ry. recently

postoffice apartments in cars, in which mail employees handle the mails, at 1 1/4 c. a lin. ft. per mile of authorized travel in cars or apartments in cars 20 ft. or less in length, inside measurement, and in cars or apartments in cars more than 20 ft. in length, inside measurement, 1 1/4 c. a lin. ft. per mile of authorized travel for the first 20 ft. and $\frac{1}{4}$ c. a lin. ft. per mile of authorized travel for each additional linear foot or fraction thereof.

5. That the minimum rate of payment on any electric railway mail route shall be \$175 a year.

6. Where the railroad companies are required by the Department to perform side, terminal, or transfer service they shall be separately compensated for such service, unless the service is performed directly contiguous to railway terminals and depots. The amount to be paid therefor shall be measured by the amount paid by the railway to contractors, plus 3%; and where the service is performed by agents or employees of the railway companies the payment shall be for the value of the pro rata time of such agents or employees while engaged in rendering the service, including cost of vehicular service that may be necessary, with the addition of 35%. Where the railway companies contract for such service contracts shall be let to the lowest bidder upon advertisement. Readjustments for such service shall be made annually. The railway companies shall submit certified copies of such contracts to the Postmaster General on or before July 1st of each year, showing the rate of payment for the ensuing year, and the amounts specified in such contracts plus 3% shall be accepted as the basis of payment by the Postmaster General heretofore prescribed. The railway companies shall also furnish the Postmaster General each year, on or before July 1, a detailed statement of the daily time consumed in handling the mails by their agents or employees at each point where side, terminal, or transfer service is performed, which statement shall be subject to the inspection of the Postmaster General, and such verified statement shall compute the pro rata amount of the agent or em-

eral, upon notification to the railway, and with their presence and assistance, shall conduct tests to determine the number of pouches, sacks, and outside packages that will fill 30 cu. ft. of space in a car or compartment of a car, and the results thereof shall be reflected in changes in rules, when necessary, in the count of pouches, sacks, and packages as the basis of measurement.

One-Man Car, Toronto Civic Ry.

8. That the provisions of the existing postal regulations, with respect to carriage of mails by electric railways, except as herein modified, shall remain in force and effect.

9. That payments for transportation of mails by electric railways and the service connected therewith shall be made each month after the service has been performed.

Answers to Questions on Electric Railway Topics.

Answers to questions submitted to the American Electric Railway Association's questioner have been given by Canadian electric railway officials as follows:

Motor bearings.—In connection with the rehousing of motor bearings, have any roads had experience with the use of the cheaper lead-base alloys?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—Many careful experiments on this system have shown definitely that the use of the cheaper lead-base alloys is not economical.

Swinging Motor Leads.—What methods are being used to protect the swinging motor leads from being broken or insulation being worn and grounding?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., Montreal.—A very simple method to protect swinging motor leads is to fasten split wooden blocks to the floor of car close to the bolster and to the motor case above axle. These split blocks have four holes slightly smaller than the lead wires in the parting line. The axes of holes in both blocks are in vertical position and wires are constrained to hang in definitely spaced positions out of contact with any grounded metal. This method is very satisfactory.

Special Track Work.—Is there any objection to opposite joints in curved portions of special track work layouts through which cars are operated at comparatively low speeds?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—No real objection to opposite joints in curved portions of special track work.

Track Labor Efficiency.—It has been claimed that the efficiency of track labor has decreased since the war. Have you any statistics to prove or disprove this assertion?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—The following statistics compiled from observations on various jobs of track work indicate that all track labor has appreciated since

1917. To complete 1 ft. of track in 1917 required 12 99/100 hours; to complete 1 ft. of track in 1920 required 10 80/100 hours. Over the same period the average wage had risen from 37.81c. to 43.1c. an hour.

Advantages of Air and Magnetic Track Brakes.—What are some of the advantages from the standpoint of maintenance of car equipment of having cars fitted with air brakes? What has been your experience as to the upkeep of cars fitted with magnetic track brakes?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—All cars are now equipped with air brakes, but we have no knowledge of any advantage from the maintenance point of view, although it is likely that the "reverse" method is not used so often for making stops.

No experience with magnetic track brakes, except experiments made some years ago which show great difficulty with track brake shoes over intersections and special work having raised guards.

The Crisis in British Tramway and Light Railway Companies' Affairs.

A conference of tramway and light railway companies in Great Britain has issued the following statement: The financial position of electric tramways companies in Great Britain is a source of increasing anxiety. The repeated increases in wages, the improvement in the working conditions of the employees, the rise in the cost of materials for track and equipment, and the impossibility of carrying out repairs and renewals during the war have multiplied the burdens on tramways to a degree which, in spite of increases in traffic, has undermined the financial stability of the whole industry. By the recent award of the interim court of arbitration, the total war bonus paid to every tramway worker over and above his basic rate of wages has been increased to 34 shillings a week. In addition, the agreement of March, 1918, for a reduction of the working hours to 48 a week without a corresponding reduction of wages has further increased the cost of labor, so that the wages bill alone amounts to more than double the pre-war figure. It is well known that the price of such materials as steel, oil, coal, and wood, which are amongst the principal requirements of the tramway industry, has risen to a crushing extent.

In the case of any ordinary industry supplying a public need, increases in cost are met by raising the price of the service. It is fully recognized by tramway companies that tramwaymen must be paid wages which will bring them on a level with men in similar occupations elsewhere, but it follows that the fares paid by the travelling public must be adequate to provide this higher standard of remuneration and to maintain the undertaking in a sound physical and financial condition. The companies are, however, subject to statutory limitation of fares and the obligation imposed by parliament in the infancy of the industry, when conditions were radically different from those of the present day.

The injustice of maintaining these limitations of fares intact was so patent that, as a result of the report made by a select committee of the House of Commons, the Board of Trade granted a measure of relief under the Statutory Undertakings (Temporary Increase of Charges) Act, 1918. It is no more than partial and temporary relief, limited to a period of two years after the war. Before a tramway company can get any relief at all it must prove that it has been adversely affected by war conditions: and the utmost it can obtain is permission to raise its fares to a point calculated to enable it to pay two-thirds of its pre-war dividend. In other words, the mischief must be done before any remedy becomes possible, and the official remedy is temporary and incomplete for

a trouble which is permanent and likely to grow more serious.

Municipal tramways, on the other hand, are by this act enabled to increase their fares to such an extent as will ensure their full interest and sinking fund. It is, moreover, open to them at any time to cover any losses by drawing upon the rates, although there are weighty objections to such a course. No such recourse is available to tramway companies. They are, further, subject to purchase by local authorities at certain period on terms which involve the provision of substantial reserves to meet the eventual loss on capital account at purchase. It has been the custom of tramway companies to set aside reserves for this purpose and for renewals, and their investments on this account have suffered the war depreciation of about 30% in the value of gilt-edged securities.

Apart from limitations on fares tramway companies work under serious disabilities which are not realized by the general public. They are legally bound to maintain, not only the rails they use, but the surface and substructure of the roadway between and bordering the rails. Many tramway companies are, in fact, under obligation to maintain the whole width of the roadway, frequently for the benefit of competing traffic. This burden of maintenance has more than doubled since the beginning of the war.

It is important also to bear in mind that most tramway undertakings are obliged to carry workmen at a statutory fare of 1/4d. (1c) a mile, or at even cheaper rates adopted at a time when the purchasing power of money was double its present value. Workmen's fares were never really remunerative, and today they involve a heavy loss which has to be made up by increase of fares within the statutory limits to the ordinary passengers.

The maintenance of an efficient and progressive tramway industry is a matter of national importance. In the year before the war tramways in Great Britain carried close upon 3,500 millions of people—nearly three times the number of third class railway passengers. Since then tramway traffic has grown, and still further demands will be made upon the industry. At a time, therefore, when tramway undertakings find themselves called upon to reconstruct their track and equipment after the inevitable delays of war, to improve and develop their services, and to adjust their finances to the new conditions created by the demands of labor, they are refused any material relief from the restrictions and burdens of pre-war days. Unless something is done, and done swiftly, tramway services must deteriorate, to the loss not only of tramway shareholders,

but of the whole travelling public. The inevitable end—assuming the existing tendencies to continue acting—is bankruptcy, first of the weaker undertakings and later even of the strongest. Already in America, where somewhat similar conditions as to fares and wages prevail, over 13% of the electric tramway undertakings fell recently into the hands of receivers, and a special commission has been appointed to save the situation for the whole industry.

If the tramway industry is to continue to pay the additional wages imposed under parliamentary authority, to provide a thoroughly efficient service, and to assist housing schemes by rapid transportation, it must be put on such a basis as will enable it to yield a fair return on the capital already spent, and to attract fresh capital for the developments required in the public interest.

There are two directions in which the government is called upon to secure reasonable conditions for tramway companies. One is to amend the antiquated limitations on maximum fares. The other is to relieve the undertakings of road maintenance and other expenses which do not properly belong to the tramway service.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.'s new station at Marpole, on the Vancouver-Steveston line, has been completed. It is a similar structure to the one at Granville St. Bridge, Vancouver. (May, pg. 257.)

Calgary Municipal Ry.'s new intersection for installation at Center St. and Eighth Ave., Calgary, Alta., was expected to be delivered by the middle of September, when it would be at once installed. It weighs 168,000 lb. (Sept., pg. 503.)

Grand River Ry.—The Board of Railway Commissioners has authorized the rebuilding of bridge 4 over Spring Creek, Preston Jct., Ont. (Sept., pg. 503.)

Hamilton St. Ry. is, we are officially advised, about to build 4,073 ft. of double track on King St. West, Hamilton, Ont., from Margaret St. to Paradise Road. (Sept., pg. 503.)

Hydro Electric Ry., Essex Division.—A press report states that work has been started on building a second track upon a section of the old Sandwich, Windsor & Amherstburg Ry. in Windsor, Ont. This section, we were advised recently, is on London St., and is about a mile long. (Sept., pg. 502.)

Lake Erie & Northern Ry., according to a press report, proposes to build a spur line on Frank St., Brantford, Ont. (Sept., 1919, pg. 501.)

London & Port Stanley Ry.—A press report states that it is proposed to erect a foot bridge over the Thames River at London, Ont., and a brick shelter at the Westminster Hospital. (June, pg. 316.)

Nova Scotia Tramways & Power Co. is reported to have notified the Halifax, N.S., City Council that it cannot raise the money necessary for work on its lines on the streets which the city is paying this year, and as a result the council decided to suspend all paving work until May, 1921, except such as was actually in progress. (Jan., pg. 34.)

Quebec Ry., Light & Power Co.—W. J. Lynch, General Manager, informed the Quebec City Council recently that the

Montreal Harbor Railway Electrification.—A press report states that about 42 miles of the Montreal Harbor Commissioners railway, which is in process of electrification, will be ready for operation next spring, and that the electrification of the remaining 16 miles will be done later. Some particulars of the work were given in *Canadian Railway and Marine World* for September, pg. 473.

Marine Department

General Shipbuilding Matters Throughout Canada.

British American Shipbuilding Co., Welland, Ont.—This company's plant was closed down permanently on Sept. 18, on the completion of the hull of the s.s. Canadian Squatter, which is under construction for Canadian Government Merchant Marine, and it is expected that the property will be offered for sale, and the shipbuilding machinery removed. The company was formed in 1918 to build steel steamships for the British Government, and received orders from the Imperial Munitions Board for three, viz., War Weasel, War Badger and War Ragoon, each of 3,500 d.w. tons. The company later received orders for two steel steamships of 4,575 d.w. tons for Canadian Government Merchant Marine, viz., Canadian Otter and Canadian Squatter.

B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., was incorporated July 29, with an authorized capital of \$1,000,000. The directors are Innes Hopkins, Managing Director; C. J. Isted, Secretary; W. H. R. Hopkins, J. K. McKenzie, G. H. Bushby and H. F. Bullen. It

has been cut in two, to pass through the canals on the way to the ocean, and it was the intention to rejoin the parts and refit her for service on the Great Lakes. We are advised that she will be completed and ready for loading so as to leave Montreal before the close of the St. Lawrence navigation season.

Dominion Shipbuilding & Repair Co., Toronto.—The construction, for Gulf Navigation Co., New Orleans, La., of the s.s. Floraba, which was partly built when the Dominion Shipbuilding & Repair Co. assigned recently, has been completed for the owners, under the direction of Capt. J. B. Foote, of Toronto, under an arrangement approved of by the court, and she left Toronto Sept. 19, with a cargo of beer for Santiago, Cuba.

John Inglis Co., Toronto, has issued a writ against the Gulf Navigation Co., New Orleans, La., asking for possession of the s.s. Floraba and for a declaration that it is entitled to a lien on the ship, and for an injunction restraining the selling or assigning of two boilers in the ship, or in the alternative the pay-

ment of \$42,045, claimed as balance of purchase money.

Halifax Shipyards Ltd., Halifax, N.S., J. E. McLurg, General Manager, stated at the luncheon following the launching of the s.s. Canadian Mariner, for Canadian Government Merchant Marine, Sept. 4, that the company was negotiating with persons who wished to place a contract for several oil tank steamships, and that there was a possibility that the keel of a 10,000 ton one might be laid on the ways vacated by the Canadian Mariner. We were officially advised Sept. 20 that this contract had not been signed.

Harbour Marine Co., Victoria, B.C., started work early in July on the car ferry for the C.P.R., which has already been described in Canadian Railway and Marine World.

Steel Tank Steamship Transpet, built for Standard Oil Co. of New Jersey, by Collingwood Shipbuilding Co.

The s.s. Transpet, which was built for the Standard Oil Co. of New Jersey's subsidiary, Compania Transportador de Petroleos, de Buenos Aires, a description of which was given in Canadian Railway and Marine World for September, sailed from Montreal, Sept. 12, for Halifax, N.S., and thence to Buenos Aires. She left the builder's yard light, and proceeded to her destination in a similar condition. On arrival at Buenos Aires she will be employed in bunkering steamships, and in lightering the large tank steamships which trade between Mexico and Campana, and which are of too great draft to proceed to Campana from Buenos Aires without being lightened.

is reported that the company will acquire, as a going concern, B.C. Marine Limited, which was incorporated in 1914, and which built the s.s. Capilano, early this year, for the Union Steamship Co., and is building an auxiliary powered schooner for the Hudson's Bay Co.

Burns & Kelleher, Halifax, N.S., have about completed the repairs to the French s.s. Barr, which was considerably damaged by fire at Dartmouth, N.S., in the spring.

Collingwood Shipbuilding Co., Collingwood, Ont., have overhauled and repaired the steamships Collingwood and W. Grant Morden, owned by Canada Steamship Lines Ltd., and Agawa, owned by Algoma Central Steamship Line, preparatory for the autumn grain trade.

J. Coughlan & Sons, Vancouver, B.C., launched the s.s. City of Vancouver, sister ship of the steamships Margaret Coughlan and Indus, Sept. 10, the christening being performed by Mrs. R. H. Humber, daughter of J. Coughlan. Like the s.s. Margaret Coughlan, the s.s. City of Vancouver will be operated by Cana-

ment of \$42,045, claimed as balance of purchase money.

See also under "The Dominion Shipbuilding & Repair Co.'s Affairs," and under "Dominion Shipbuilding & Repair Co.," in "Canadian Government Merchant Marine, Shipbuilding, Operation, etc.," on other pages of this issue.

Fraser Brace Shipyards Ltd., Montreal, is overhauling and refitting the s.s. Paiponge, formerly a Great Lakes ship, to fit her for ocean freight service. The work includes overhauling the main engines, boilers and auxiliaries, supplying of new winches, anchors and chains, new masts and derricks and complete new accommodation for officers and crew, at an approximate cost of \$150,000. The s.s. Paiponge was owned formerly by Canadian North West Steamship Co., Port Arthur, Ont., and in 1918 was sold to South American parties for operation between South American ports, but owing to default in payments, she was again sold, the purchaser being H. B. Smith, President, Collingwood Shipbuilding Co. Prior to this sale, the ship had

The company stated recently that it hoped to obtain orders for ships for the French Government, under the legislation to aid shipbuilding, passed by the Dominion Parliament at its recent session. On the other hand, press reports say that after the two steel cargo steamships building for Canadian Government Merchant Marine and the C.P.R. car ferry are completed the yard will be closed.

The Montreal Light, Heat & Power Co. has commissioned Walter Lambert, M.I. N.A., naval architect and marine surveyor, Montreal, to design a small ice breaker, tenders for building which will be asked about the end of October.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The company's report for the year ended June 30 indicates a slackening of operations, following the busy period in shipbuilding during the war. The assets were \$5,982,162, against \$6,154,902 at June 30, 1919; gross profits, \$583,369, against \$821,549; other income, \$109,110, against \$87,688; general and administration expenses, \$164,183, against

Princess Rupert Dry Dock & Engineering Co., Ltd., 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, 148, 150, 152, 154, 156, 158, 160, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188, 190, 192, 194, 196, 198, 200, 202, 204, 206, 208, 210, 212, 214, 216, 218, 220, 222, 224, 226, 228, 230, 232, 234, 236, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256, 258, 260, 262, 264, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292, 294, 296, 298, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338, 340, 342, 344, 346, 348, 350, 352, 354, 356, 358, 360, 362, 364, 366, 368, 370, 372, 374, 376, 378, 380, 382, 384, 386, 388, 390, 392, 394, 396, 398, 400, 402, 404, 406, 408, 410, 412, 414, 416, 418, 420, 422, 424, 426, 428, 430, 432, 434, 436, 438, 440, 442, 444, 446, 448, 450, 452, 454, 456, 458, 460, 462, 464, 466, 468, 470, 472, 474, 476, 478, 480, 482, 484, 486, 488, 490, 492, 494, 496, 498, 500, 502, 504, 506, 508, 510, 512, 514, 516, 518, 520, 522, 524, 526, 528, 530, 532, 534, 536, 538, 540, 542, 544, 546, 548, 550, 552, 554, 556, 558, 560, 562, 564, 566, 568, 570, 572, 574, 576, 578, 580, 582, 584, 586, 588, 590, 592, 594, 596, 598, 600, 602, 604, 606, 608, 610, 612, 614, 616, 618, 620, 622, 624, 626, 628, 630, 632, 634, 636, 638, 640, 642, 644, 646, 648, 650, 652, 654, 656, 658, 660, 662, 664, 666, 668, 670, 672, 674, 676, 678, 680, 682, 684, 686, 688, 690, 692, 694, 696, 698, 700, 702, 704, 706, 708, 710, 712, 714, 716, 718, 720, 722, 724, 726, 728, 730, 732, 734, 736, 738, 740, 742, 744, 746, 748, 750, 752, 754, 756, 758, 760, 762, 764, 766, 768, 770, 772, 774, 776, 778, 780, 782, 784, 786, 788, 790, 792, 794, 796, 798, 800, 802, 804, 806, 808, 810, 812, 814, 816, 818, 820, 822, 824, 826, 828, 830, 832, 834, 836, 838, 840, 842, 844, 846, 848, 850, 852, 854, 856, 858, 860, 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 894, 896, 898, 900, 902, 904, 906, 908, 910, 912, 914, 916, 918, 920, 922, 924, 926, 928, 930, 932, 934, 936, 938, 940, 942, 944, 946, 948, 950, 952, 954, 956, 958, 960, 962, 964, 966, 968, 970, 972, 974, 976, 978, 980, 982, 984, 986, 988, 990, 992, 994, 996, 998, 1000.

Princess Rupert Dry Dock & Engineering Co., Ltd., 110, 112, 114, 116, 118, 120, 122, 124, 126, 128, 130, 132, 134, 136, 138, 140, 142, 144, 146, 148, 150, 152, 154, 156, 158, 160, 162, 164, 166, 168, 170, 172, 174, 176, 178, 180, 182, 184, 186, 188, 190, 192, 194, 196, 198, 200, 202, 204, 206, 208, 210, 212, 214, 216, 218, 220, 222, 224, 226, 228, 230, 232, 234, 236, 238, 240, 242, 244, 246, 248, 250, 252, 254, 256, 258, 260, 262, 264, 266, 268, 270, 272, 274, 276, 278, 280, 282, 284, 286, 288, 290, 292, 294, 296, 298, 300, 302, 304, 306, 308, 310, 312, 314, 316, 318, 320, 322, 324, 326, 328, 330, 332, 334, 336, 338, 340, 342, 344, 346, 348, 350, 352, 354, 356, 358, 360, 362, 364, 366, 368, 370, 372, 374, 376, 378, 380, 382, 384, 386, 388, 390, 392, 394, 396, 398, 400, 402, 404, 406, 408, 410, 412, 414, 416, 418, 420, 422, 424, 426, 428, 430, 432, 434, 436, 438, 440, 442, 444, 446, 448, 450, 452, 454, 456, 458, 460, 462, 464, 466, 468, 470, 472, 474, 476, 478, 480, 482, 484, 486, 488, 490, 492, 494, 496, 498, 500, 502, 504, 506, 508, 510, 512, 514, 516, 518, 520, 522, 524, 526, 528, 530, 532, 534, 536, 538, 540, 542, 544, 546, 548, 550, 552, 554, 556, 558, 560, 562, 564, 566, 568, 570, 572, 574, 576, 578, 580, 582, 584, 586, 588, 590, 592, 594, 596, 598, 600, 602, 604, 606, 608, 610, 612, 614, 616, 618, 620, 622, 624, 626, 628, 630, 632, 634, 636, 638, 640, 642, 644, 646, 648, 650, 652, 654, 656, 658, 660, 662, 664, 666, 668, 670, 672, 674, 676, 678, 680, 682, 684, 686, 688, 690, 692, 694, 696, 698, 700, 702, 704, 706, 708, 710, 712, 714, 716, 718, 720, 722, 724, 726, 728, 730, 732, 734, 736, 738, 740, 742, 744, 746, 748, 750, 752, 754, 756, 758, 760, 762, 764, 766, 768, 770, 772, 774, 776, 778, 780, 782, 784, 786, 788, 790, 792, 794, 796, 798, 800, 802, 804, 806, 808, 810, 812, 814, 816, 818, 820, 822, 824, 826, 828, 830, 832, 834, 836, 838, 840, 842, 844, 846, 848, 850, 852, 854, 856, 858, 860, 862, 864, 866, 868, 870, 872, 874, 876, 878, 880, 882, 884, 886, 888, 890, 892, 894, 896, 898, 900, 902, 904, 906, 908, 910, 912, 914, 916, 918, 920, 922, 924, 926, 928, 930, 932, 934, 936, 938, 940, 942, 944, 946, 948, 950, 952, 954, 956, 958, 960, 962, 964, 966, 968, 970, 972, 974, 976, 978, 980, 982, 984, 986, 988, 990, 992, 994, 996, 998, 1000.

The regulations for vessels to be constructed at our Prince Rupert yard, as proposed, are as follows: The United States Shipping Board's policy of extending a 10 years contract and obtaining more favorable terms to purchasers of vessels built by the U. S. Navy, and which amount to 1,700,000 tons, with which you are doubtless familiar. A small of 60,200 tons would, in our judgment, be sufficient attractive to give Canadian shipyards sufficient orders to keep them occupied for 18 months to come, at least."

An Ottawa press dispatch of Sept. 15 said:—"A form of proposed contract between the Mexican Government and the

Canadian Government of the company, the French Government has applied to the Pacific Coast at Montreal for the construction of five modern steamships, named Bellefleur, Beausoleil, Catherine, Corbin and Desrochers, now lying at Quebec. The claim asserts that the French Government ordered 10 of these ships from the Anderson Co. of New York, and that this order was passed on to the Three Rivers Shipyards Ltd., a subsidiary of the National Shipbuilding Corporation, of Wilmington, Del. Five of the ships have been delivered, and the whole 10 have been paid for, at \$322,500 each, there being an amount of about \$200,000 still to be paid for minor changes and repairs on the five, the possession of which is now being sought.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—Instructions have been given for the laying of the keel of the fourth wooden ship which this company is building under special financial aid from the Dominion Government. It was at first anticipated that only three of these ships would be undertaken, although the agreement provided for four. It is expected that the first will be ready for launching during November.

Wallace Shipyards Ltd., North Vancouver, B.C.—With reference to the report that the C.P.R. had given this company an order for a steamship for the British Columbia Coast Service, as men-

Canadian Notices to Mariners.

The Marine Department has issued the following:

British Columbia.—The fixed white light near the north end of Pilot Point, Pilot Bay, Kootenay Lake, has been replaced by an occulting acetylene light automatically occulted at short intervals.

The fixed red light on Hospital Rock buoy, Victoria Harbor, formerly maintained from Nov. 1 to Mar. 31, only, will be maintained throughout the year.

New Brunswick, Bay of Fundy.—A larger fog bell and mechanism have been installed on the northwest point of Cherry Island in Passamaquoddy Bay, giving one stroke every 20 seconds, instead of one stroke every 15 seconds, as formerly.

Nova Scotia, Halifax Harbor.—The Sambre lightship 15 at Sambre outer bank at the entrance to Halifax harbor, will without further notice, on or about Oct. 1, be removed from her station to undergo necessary overhaul. While she is away her station will be marked by a combined gas and whistling buoy painted black, showing an occulting white light, and further notice will be given when the lightship is replaced.

Northumberland Strait.—The revolving white light at the west end of Picotou Island will be replaced, without further

Steamship, with capacity for 1,000 passengers, to be built for Canada Steamship Lines Ltd., Toronto-Niagara Falls Service.

For description, see Canadian Railway and Marine World for September, pg. 522.

Prince Rupert Dry Dock & Shipbuilding Co. is before the Marine Department for approval. It contemplates the construction of 37 vessels, tankers, coast patrol, freight and passenger boats. Newman Erb, a New York financier, is conducting the negotiations. The department has been asked to examine the contract, but no application for financial aid under the act of last session has yet been made, though it is expected." Another dispatch of Sept. 16 said the shipbuilding company had applied for government aid, but we were advised by the Marine Department Sept. 22 that no such application had then been received.

J. H. Pillsbury, acting Manager of the company's plant at Prince Rupert, was reported to have stated in Vancouver, B.C., recently, that the company had an order for 5 steel oil tank steamships and that the steel would probably be obtained from Sydney, N.S.

Southern Salvage Co., Liverpool, N.S. This company's shipbuilding plant was destroyed by fire Sept. 17, the damage being estimated at \$20,000. The company built one of the "war" type of wooden steamships for the British Government, under order from the Imperial Munitions Board.

Three Rivers Shipyards Ltd., Three Rivers, Que.—In connection with the li-

tioned in our last issue, we were officially advised Sept. 2 that while the contract had not yet been signed, there was every reason to believe that it would be. The dimensions of the new ship will be—length b.p. 317 ft., beam 48 ft., depth of hold 18½ ft. She will have cellular double bottom, and the hull will be divided by 8 transverse bulkheads. She will be single screw, driven by reciprocating engines, balanced on the Yarrow, Schlick and Tweedie system, for a speed of 16 knots an hour. She is designed for an all round service on the coast. The accommodation will be arranged for about 200 first class passengers, with carrying capacity for about 600 tons of cargo. She will be equipped to burn oil fuel, and will be easily convertible into a coal burning ship. She will be built to the British Corporation class, fully equipped in accordance with Canadian inspection requirements, amply lighted, and provided with hot and cold running water in every stateroom, with every modern convenience. The cost of the ship completed and fully furnished, will be about \$1,500,000.

Work was commenced Sept. 17 on an attempt to raise the s.s. Vinemount, which was sunk at Cascade Point, near the foot of the Soulanges Canal, some time ago.

notice, by a flashing white catoptric light, showing 2 flashes every 30 seconds, with an interval 7½ seconds between each.

Ontario, Georgian Bay.—The color of the octagonal lantern on Brebeuf Island black range, Beausoleil Island, will be changed from red to white, without further notice.

Lake Erie.—The occulting acetylene light, on the outer end of the east breakwater pier, Rondeau harbor, will be replaced by a fixed white light; the occulting white acetylene light on the inner end of the east pier will be replaced by a flashing white light, showing a flash every 8 seconds; and the occulting white light on the outer end of the west breakwater pier will be changed to an occulting red light, on or after Sept. 1.

The occulting white acetylene light, shown from a lens lantern on a pole, on the southern extremity of Pointe aux Pins, about 2½ miles east of Rondeau harbor, will be slightly increased in power, on or after Sept. 1.

Northern Pulpwoods & Transport Co. Ltd. has been incorporated under the Ontario Companies Act, with \$500,000 authorized capital and office at Toronto, to carry on a general lumber and pulpwood business, and to own and operate ships.

Canadian Pacific Railway Co's Twin Screw Steamship Montcalm.

Canadian Railway and Marine World for August announced the launching at Clydebank, Scotland, on July 3, of the twin screw steamship Montcalm, being built for the C.P.R., to run under the management of Canadian Pacific Ocean Services Ltd., in its cabin service, between Canada and Liverpool, Eng. The following fuller information has been received since:—The Montcalm is the first of three ships now being built for the C.P.R., two being under construction at Clydebank, and one at Govan, Scotland. She is being built to Lloyd's highest class to meet all the Board of Trade requirements as a passenger ship. Her principal particulars are as follows: Length on waterline, 563 ft.; breadth moulded, 70 ft.; depth to C (shelter) deck, 43½ ft.; depth to boat deck, 68 ft.; gross tonnage, about 16,200 tons.

The ship is of the shelter deck type, with the bridge deck extending almost the full length, and long erections above. She has a cruiser stern, 2 masts, and 2 funnels, which will give her when complete a most imposing appearance. Twelve watertight bulkheads, extending to C deck, divide the ship into 13 watertight compartments, and provide a high standard of subdivision. The cellular double bottom, in which will be stored oil fuel and reserve feed water, extends fore and aft the complete length, and is carried well up the bilges, giving additional protection; while the machinery spaces are further shielded by longitudinal bulkheads and inner skins. Oil fuel will be stored in these compartments also, at the side of the machinery spaces. Fresh water tanks are built alongside the shaft tunnels.

Spacious accommodation for 454 cabin passengers is provided amidships on B and C decks, the staterooms being arranged for 2 and 4 passengers and furnished most comfortably. The cabin dining saloon, a spacious apartment extending the full breadth of the ship and providing ample seating accommodation, is located on D deck, amidships, convenient to the main entrance, and has a large well overhead. The decoration is in Georgian style and the walls are painted white, while the ceiling is finished with artistic mouldings. A large number of tables are arranged for small parties. At the forward end of A deck is the cabin lounge, decorated in Georgian style and arranged in small bays and cosy corners, with separate writing room and card room at the forward end. The raised deck over, in conjunction with the large windows, give this room a spacious appearance. The floor is finished in oak, laid on springs, for dancing. A large tapestry panel is fitted over the fireplace, and the walls and ceiling are painted white. Just abaft the after funnel hatch, on the same deck, is the cabin drawing room, with raised deck over, and a large bay window on one side. This room is also decorated in Georgian style and finished in white. Next to the cabin drawing room is the library. The cabin smoking room is at the aft end of A deck. Its style is Jacobean, and the walls are framed in oak. As with the lounge and drawing room, this apartment is fitted with a large electric fireplace, which greatly adds to its comfort and appearance. Extensive promenading space for cabin passengers is provided on A and B decks. On A deck the promenade encircles the deck houses, and extends the whole length of the deck,

allowing plenty of space for games, clear of the actual promenade, and sheltered recesses are arranged for deck chairs.

Most comfortable permanent third class accommodation is provided on D and E decks in 2, 4 and 6 berth rooms, where there is also portable accommodation for an additional number of passengers. The third class dining saloon is on D deck aft. Two smoking rooms and two lounges are fitted, a large one of each on B deck aft, with smaller ones on C deck forward. The lounge on B deck aft is finished and decorated after the style of a Parisian cafe.

The captain is accommodated on the navigating bridge, the officers on A deck forward, and the engineers on C deck aft, complete with cabins, bathrooms, lavatories, etc. The seamen and boiler attendants are berthed amidships on C deck. The galleys, pantries and bakery for first and third class accommodation are amidships on D deck, between the dining saloons, thus ensuring quick service. All the latest improvements for cooking, etc., have been supplied.

The heating and cooling is on the thermostat system, which will ensure a temperature of at least 65° Fahr. under the coldest weather conditions. Ten thermostats are fitted, sufficient to change the air in any of the compartments to which they are connected at least 8 times an hour.

The cargo will be handled by means of steel tubular derricks, fitted on the masts and derrick posts. Each hatch is supplied with 3 derricks, worked by 14 electric winches.

Ample lifeboat accommodation, to the standard of the International Convention, is provided for all passengers and crew. Two rows of nested boats are fitted on sliding chocks, so that they can be moved from one side of the ship to the other, and are placed under Babcock & Wilcox (Wylie) patent double-acting davits. The remaining lifeboats are worked by Australis patent davits, specially designed to enable the boats to be got out and lowered with the least possible delay and without manual labor. A complete system of wireless telegraphy and fire extinguishing service have been fitted. Pneumometer tank gauges have been fitted in all oil fuel and fresh water tanks, with indicators in the machinery space, so that the tanks are always under the supervision of the engineers.

The propelling machinery fitted in one engine room, consists of two sets of steam turbines of the latest Brown-Curtis marine type, arranged to work with superheated steam, and driving twin screws through double-reduction helical gearing. Each set of turbines consists of one high-pressure and one intermediate pressure turbine, in tandem, driving through one portion, and one low pressure turbine driving through the other portion of the gearing. A stern turbine is incorporated in the casings of the intermediate and low pressure ahead turbines. Adjusting blocks of the Michell type are fitted to the turbines, and the bearings of the turbines and gearing are arranged to work under forced lubrication. One condenser of the underhung type is fitted for each set of turbines, and bolted direct to the exhaust branch of the low pressure turbine. The main shafting is of ingot steel and is finished bright all over. Each line has a main thrust block of the Michell type fitted next to the gearing to take up the propeller thrust.

The propellers are of the built type, with four manganese bronze blades to each. The bosses are of cast steel, and cast iron cones are fitted over the propeller nuts. A very full equipment of auxiliary machinery is fitted, comprising 2 centrifugal circulating pumps, 2 Weir dual air pumps, 2 pairs of Weir feed pumps, 2 hot-well pumps, 1 Weir surface and one direct-contact feed water heater, 2 feed water filters of gravitation type, and also an outfit of forced lubrication, sanitary, freshwater and other service pumps, together with complete evaporating and distilling plant and auxiliary condenser and pumps.

The steam-generating installation consists of 10 single-ended cylindrical boilers, arranged for burning oil fuel, and suitable for a working pressure of 215 lb. per sq. in., and fitted with smoke-tube superheaters. Each of the boilers has three furnaces, and Howden's type of forced draught is fitted. The boilers are placed in two compartments, and each boiler room is equipped with a working, and a stand-by, oil fuel installation, complete with the necessary pumps, heaters and strainers. The forced draught fans are electrically driven, there being two fans and motors to each boiler room. The machinery and boilers have been built to the requirements of the Board of Trade, Lloyd's Survey, and Canadian Government regulations.

The ship was designed by Hugh Macdonald, Naval Architect, C.P.O.S., and is being built by John Brown & Co., under the supervision of the owner's consulting naval architects, J. H. Biles & Co., of London and Glasgow.

We are advised that the s.s. Montcalm is expected to be ready for service by March, 1921.

Panama Canal Traffic.

The Panama Canal completed 6 years of operation on Aug. 14, having been opened to commerce on Aug. 15, 1914. During the 6 years the total number of commercial ships making the transit was 10,573. Their aggregate net tonnage, according to the rules of measurement, was 34,540,266. The cargo they carried totaled 40,313,629 tons of 2,240 lb.

This traffic was made up of 4,934 ships, of 16,145,434 net tons, carrying 16,576,778 tons of cargo from the Atlantic to the Pacific, and 5,639 ships, of 18,394,832 net tons with 23,736,851 tons of cargo from the Pacific to the Atlantic.

The canal was opened shortly after the beginning of the late European war. This and the interruptions of traffic due to slides, the last serious one of which came to an end on April 15, 1916, interfered with the normal use of the canal in its earlier years, and government requisitioning, high freights, scarcity of tonnage, financial and industrial uncertainties, and fueling difficulties have since the signing of the armistice delayed the establishment of what may be considered the conditions of unrestricted commerce. A distinct and healthy growth of the traffic is, however, discernible, especially in the calendar year 1919 and the fiscal year 1920. Each of these, in ships and net tonnage, exceeded all previous years; and the fact that the traffic in the month and a half of the current fiscal year, beginning July 1, 1920, has been at a rate greater than that of any of the preceding years, indicates a continuing upward trend.

Canadian Government, Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Passenger Accommodation for West India.—It has been decided to build two passenger steamships for the Canadian Government, and the Canadian Merchant Marine Department contracts for 16 builders, each one 2,000 d.w. tons, each approximately 5,100 d.w. tons; under the plan of the Department, the ships will be built by the West India Steamship Co., Ltd., Three Rivers, Que., and the ships will be used for the West India service.

Launching of Steamships.—Steel Canada, Ltd., and Marine Works, Ltd., Sept. 2, have reported we have been advised of the following launching of two cargo steamships for Canadian Government Merchant Marine:—

Sept. 4, s.s. Canadian Mariner; Marine Department contract 21; builder's yard no. 1; approximately 3,390 d.w. tons, Halifax Shipyard Ltd., Halifax, N.S.

Sept. 20, s.s. Canadian Pioneer; Marine Department contract 16; builder's yard no. 8; approximately 5,100 d.w. tons, Tidewater Shipbuilders Ltd., Three Rivers, Que.

Delivery of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following delivery has been made:—

Aug. 26, s.s. Canadian Victor; Marine Department contract 50; builder's yard no. 77; approximately 8,390 d.w. tons, Canadian Vickers Ltd., Montreal. This ship sailed from Montreal, Sept. 2, with general cargo, for Liverpool.

Officers of Steamships.—The following officers have been appointed to Canadian Government Merchant Marine steamships since those mentioned in our last issue:—

Masters.—Canadian Adventurer, Capt. C. S. Hill, vice Capt. W. Wyman, transferred; Canadian Conqueror, Capt. H. E. Webb, formerly on Canadian Seigneur; Canadian Pioneer, Capt. M. Robertson, vice Capt. T. R. Coffin, transferred; Canadian Runner, Capt. W. Wyman, formerly on Canadian Adventurer; Canadian Seigneur, Capt. J. E. Faulkner, formerly on Canadian Trapper, vice Capt. H. E. Webb, transferred; Canadian Trapper, Capt. J. D. MacKenzie, vice Capt. J. E. Faulkner, transferred; Canadian Victor, Capt. T. E. Coffin, formerly on Canadian Pioneer; Canadian Winner, Capt. W. Wingate.

Engineers.—Canadian Carrier, W. Fotheringham; Canadian Farmer, R. H. Murphy; Canadian Fisher, T. J. S. Ray; Canadian Mariner, S. Evans; Canadian Observer, F. Stanley; Canadian Planter, W. O. Beavers; Canadian Raider, T. Fraser; Canadian Recruit, G. Stephen; Canadian Runner, C. Thompson; Canadian Sealer, J. Hoey; Canadian Squatter, W. Cunningham; Canadian Voyager, R. Cook; Canadian Warrior, John Prysz.

Ontario Freight Office.—A Canadian Government Merchant Marine office has been opened at the corner of King and Toronto Sts., Toronto, in the room occupied formerly by the C.N.R. ticket office. It is in charge of F. G. Wood, General Ontario Freight Agent.

Appointment of Officials.—J. P. Doherty, heretofore Port Agent, C.G.M.M., at St. John, N.B., is reported to have been appointed Assistant General Freight Agent, at Montreal, and Harold E. Kane, heretofore his assistant at St. John, is reported to have been appointed Port Agent there.

West Indian Representatives.—The following representatives have been appointed for Canadian Government Merchant Marine and Canadian National Rys.: Bridgetown, Barbados, Gardner Austin & Co.; Georgetown, Demerara, Sandbach, Parker & Co.; Kingston, Jamaica, Jamaica Shipping & Trading Co.; Trinidad, Geo. F. Huggins & Co.

East Indian Service.—Canadian Government Merchant Marine has made an arrangement with the British India Steam Navigation Co. under which Canadian Government Merchant Marine and the British India Steam Navigation Co. will each have an equal number of the latest steel cargo steamships in joint service between eastern Canadian ports and India, the Straits Settlements and Java. During St. Lawrence navigation, Montreal will be the Canadian port and during the winter this traffic is to be handled through Halifax, N.S., and St. John, N.B. The agents of the British India S. N.

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McMeekin, Victoria Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; F. W. O'Brien, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. E. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

Co. will handle Canadian Government Merchant Marine ships in the far east and will secure cargoes for the return voyages to Canada, and the British India S. N. Co. ships will be handled in Canadian ports by Canadian Government Merchant Marine. Traffic beyond Canadian seaports to interior points in Canada will be handled over the Canadian National Rys. When the Canadian Government Merchant Marine places ships in service from Vancouver to India, the Straits Settlements and Java, the agents of the British India S. N. Co.s agent will handle these ships as well. The C.G.M.M. s.s. Canadian Pioneer sailed from Montreal for British India, Java, and the Straits Settlements on Sept. 11, and the British India S. N. Co.s s.s. Boyne is scheduled to sail from Montreal about the end of October.

Oriental Service.—Canadian Government Merchant Marine has made an arrangement with Alfred Holt & Co., of the Blue Funnel Line, of Liverpool, Eng., for the establishment of a joint steamship service between Vancouver, B.C.,

and the Orient, each company having a like number of ships for joint service. Both companies will be represented in the Orient by Alfred Holt & Co.s agents, Butterfield, Swire & Co., who have offices in all important places in China and Japan, and who will also act as agents for both Canadian Government Merchant Marine and Canadian National Rys.

The s.s. Canadian Recruit, which, as stated in our last issue, is being repaired by Fraser Brace Shipyards Ltd., Montreal, after having been wrecked on Vache Reef, at the mouth of the Saguenay River, Dec. 20, 1919, will, we are advised, be completed ready for loading at Montreal, before the close of St. Lawrence navigation. The work in progress covers complete overhaul and renewal where necessary. Practically the whole of the bottom plating, floors, etc., and a considerable portion of the side plating, will be replaced, and new deck winches, derricks and gear will be supplied. The accommodation for passengers and the officers and crew will be practically renewed. A complete new cast steel stern post and rudder will be fitted, and the main engines, boilers, propellers, shafting and auxiliaries will be thoroughly overhauled. The work will cost about \$300,000.

British American Shipbuilding Co., Welland, Ont.—The two sections of the s.s. Canadian Squatter; Marine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons, which were launched on July 20 and 26 respectively, left Welland, on Sept. 13, in tow, for Montreal, where they will be joined together at Canadian Vickers Ltd. plant.

Canadian Vickers Ltd., Montreal, delivered the steel cargo steamship Canadian Victor; Marine Department contract 50; builder's yard no. 77; approximately 8,390 d.w. tons, to the Marine Department. She was transferred to Canadian Government Merchant Marine, Aug. 25, loaded with general cargo, and sailed, Sept. 2, for Liverpool.

The Dominion Shipbuilding & Repair Co. Ltd., Toronto, when it assigned, on July 31, had under construction, for Canadian Government Merchant Marine, two steel cargo steamships, Canadian Pathfinder and Canadian Engineer, Marine Department contracts 48 and 49; builder's yard nos. 10 and 11; each approximately 3,500 d.w. tons. They were both in frame, awaiting shell plates, before further erections of the hulls could be proceeded with. The interim liquidator, Osler Wade, has intimated to the Marine Department his willingness to co-operate, so that the loss sustained by the Government may be reduced to the minimum, either by the liquidator continuing the work, on a cost plus basis, or by permitting the Government to proceed itself.

Halifax Shipyards Ltd., Halifax, N.S., launched the s.s. Canadian Mariner; Marine Department contract 21; builder's yard no. 1; approximately 3,390 d.w. tons, Sept. 4, the christening being performed by Mrs. R. M. Wolvin, wife of the building company's Vice President and Managing Director. This ship is the first steel cargo steamship to be built at Halifax. The keel was laid Feb. 24, 1919, but there was considerable delay in construction owing chiefly to the shortage of steel plates.

Halifax Shipyards Ltd., expects to launch the steel cargo steamship Canadian Explorer; Marine Department con-

Mainly About Marine People.

tract 22; builder's yard no. 2; approximately 8,390 d.w. tons, for Canadian Government Merchant Marine early in December.

Midland Shipbuilding Co., Midland, Ont., which is building the steel cargo steamship Canadian Logger; Marine Department contract 54; builder's yard no. 10; approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, the keel of which was laid June 9, advised Canadian Railway and Marine World, Sept. 15, that the date of launching was very indefinite, as it still had to get 625 tons of steel plate from Nova Scotia and had no assurance as to when it would be received. This material was to have been delivered at Midland by the middle of April.

Prince Rupert Drydock & Engineering Co., Prince Rupert B.C., which is building two steel cargo steamships for Canadian Government Merchant Marine, viz., Canadian Reaper and Canadian Thrasher; Marine Department contracts 42 and 43; builder's yard nos. 1 and 1; each approximately 8,390 d.w. tons, advised Canadian Railway and Marine World, Sept. 10, that Canadian Reaper would probably be launched early in November and Canadian Thrasher about a month later.

Tidewater Shipbuilders Ltd., Three Rivers, Que., launched the steel cargo steamship Canadian Forester; Marine Department contract 16; builder's yard no. 8; approximately 5,100 d.w. tons; for Canadian Government Merchant Marine Ltd., Sept. 20.

United States Shipping and Shipbuilding Notes.

The U.S. Shipping Board has authorized American Shipbuilding Co. to sell 10 steel steamships of approximately 3,700 d.w. tons each, for transfer to foreign registry. The Board stated it had been informed that the company would receive about \$662,700 each for the ships, which approximates \$171 a d.w. ton.

President Wilson has refused to notify foreign governments of the intention to abrogate commercial treaties, under the section of the Merchant Marine Act, which was designed to terminate treaties which prevent the imposition of discriminating duties on imports carried in foreign ships and discriminatory tonnage dues on foreign ships.

The U.S. Shipping Board offered for sale recently, 1,200 steel steamships, to private interests, at a fixed scale of prices, but failed to obtain any bids. It is now reported that about 100 ships will be selected and bids invited for them, the Board reserving the right to reject any bids. It is stated by some U.S. shipowners that the Board will have no difficulty in selling the ships, provided that it is willing to accept their value, but this, it is admitted, would involve a loss of over \$1,000,000,000, basing the cost on \$220 a ton.

The s.s. American, registered in the name of the Jamaica Steamship Co., Kingston, Jamaica, was offered for sale by public auction towards the end of September by the sheriff at Halifax, N.S., in connection with the claim of I. H. Mathers & Son, against the owners for wages and disbursements. She was built at Middlesbrough, Eng., in 1890, and is screw driven by engine of 110 h.p., and has the following dimensions,—length 194.9 ft., breadth 25.7 ft., depth 20.7 ft.; tonnage, 971 gross, 588 net.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries and of Naval Service, has been elected an honorary vice president of the Meighen Club, which has been established in Montreal for political purposes. Senator Lorne C. Webster, President Webster Steamship Co., etc., has been elected an honorary councillor of the club.

G. M. Bosworth, Chairman, Canadian Pacific Ocean Services, and Mrs. Bosworth, will leave Montreal early in October for a visit to Virginia Hot Springs.

Lieut. Commander C. P. Edwards, General Superintendent, Radiotelegraph Branch, Naval Service Department, Ottawa, has been made an officer of the order of the British Empire, as a reward for war services.

E. H. James, who has been appointed Resident Engineer, for the construction

of the Collingwood Shipbuilding Co. for some years, has recently also been elected President of Davie Shipbuilding & Repairing Co., Lauzon, Que., and of Halifax Shipyards Ltd., Halifax, N.S. The three shipbuilding companies mentioned are to be included in the British Empire Steel Corporation merger. Mr. Smith was born in Owen Sound, Ont., and practiced law there until 1889, when he went into business, becoming principally interested in the North American Bent Chair Co. He is also President of the Northern Navigation Co. of Ontario, North American Furniture Co., Owen Sound Chair Co., Steam Navigation Co. of Canada, Vice President, Kilburn Co., and a director of Canada Steamship Lines, Dominion Steel Corporation, and several other companies. He removed from Owen Sound recently, and is living in Toronto.

Richard Welsford is reported to have been appointed Resident Managing Director, Union Steamship Co. of British Columbia, Ltd., Vancouver, succeeding the late E. H. Beazley. He is a son of J. H. Welsford, of J. H. Welsford & Co., Liverpool, Eng., which controls the Union Steamship Co. of British Columbia. It is stated that he will enter upon his new duties Jan. 1, 1921. He was in Vancouver during August and returned to England early in September.

Coal Exportation and the s.s. Lydia.—An interesting case developed recently following on the Board of Railway Commissioners order respecting the exportation of coal from Canada. The s.s. Lydia, at the time the order was issued, was loading 4,500 tons of coal at Port Hastings, N.S., and it was stated that the coal was for a U.S. port, and thus was not affected by the order. Suspicions were aroused as to the actual destination of the coal, which was stated to be a European port, the coal of the ship at New York being alleged to be merely a subterfuge. The Board of Railway Commissioners therefore ordered the detention of the ship and it was ultimately admitted that the coal was intended for a European port. It was announced Sept. 10 that the ship had been released, after having deposited \$10,000 as a bond that the coal was to be sold and delivered to a Canadian or Newfoundland port, or discharged and consumed in a U.S. port. A report from Sydney, N.S., Sept. 12, stated that the Lydia ran ashore at Bear Head, in the Strait of Canso, Sept. 10, while bound for a foreign port with coal from Port Hastings. She released herself the following day, with apparently no damage, and proceeded on her voyage.

Strike of Steamship Employees on Great Lakes.—A strike of seamen engaged on Great Lakes steamships took place Sept. 16, for an increase of 20% in wages and some changes in working conditions. On Sept. 17, the C.P.R. announced that its steamship service between Port McNicoll, Owen Sound and Fort William was cancelled for the remainder of the season on account of the strike.

The other companies operating on the Great Lakes had their service interfered with more or less. After some negotiations, the men, it was reported Sept. 24, accepted an increase of \$10 a month, and resumed work. The C.P.R. service was not resumed, the order cancelling it for the balance of the season remaining effective.

Horace Bruce Smith.

President, Northern Navigation Co., Collingwood Shipbuilding Co., Davie Shipbuilding & Repairing Co., Halifax Shipyards, Ltd., etc.

of the Ballantyne pier, Vancouver, B.C., was, prior to the war, engaged in harbor and dock construction in eastern Canada, and since then has been engaged in connection with the litigation re the expropriation of the Halifax Graving Dock Co.'s property. He served with the Canadian Engineers during the war and had four years active service in France, and at the signing of the armistice was Assistant Bridge Engineer at General Headquarters, Royal Engineers.

Alex. Johnston, Deputy Minister of Marine and Fisheries, will, it is reported, resign shortly to enter the British Empire Steel Corporation's service.

J. B. McAndrew, formerly on active service overseas, has been appointed Structural Engineer, Welland Ship Canal, at an initial salary of \$2,700 a year.

Miss Mabel Robb, daughter of Thos. Robb, Manager, Shipping Federation of Canada, was married at Montreal Sept. 22 to G. W. Blacklock.

Horace Bruce Smith, who has been Pre-

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

Atlantic and Pacific Ocean.

The schooner Clarence A. Moulton, from Cape Breton for Nantes, France, was reported, Sept. 13, to have been burned at sea, the crew having been saved.

Furness Withy & Co. have advised us that they have not bought the s.s. Royal George from the Cunard Steamship Co., as reported in a press dispatch mentioned in our last issue.

The schooner Maid of Brazil, which sailed from Cape Breton recently with coal, was reported to have put into Cherbourg, France, Sept. 13, with fire in her cargo. She was bound for Rotterdam.

Canadian Pacific Ocean Services' s.s. Tunisia, which was damaged in a collision with Manchester Liners' s.s. Manchester Division, in the River St. Lawrence, near Quebec, Aug. 8, has been repaired, and returned to service, Sept. 17.

Canadian Pacific Ocean Services' s.s. Empress of Britain arrived at Quebec, Sept. 8, on her maiden trip, after having been reconditioned and refitted on the conclusion of her war service. As stated in a previous issue, she has been changed to burn fuel oil, and is thus the first oil burning passenger steamship to come up the St. Lawrence. The voyage from Liverpool to Quebec was made in 5 days, 22 hr., 20 min., an average speed of 18.5 knots an hour. She brought 1,282 passengers.

White Star-Dominion Line's s.s. Regina, which is under construction at Belfast, Ireland, is expected to be ready to reopen that company's St. Lawrence season in May, 1921. She is of the single cabin type, approximately 16,000 tons. A sister ship, the s.s. Calgary, is also under construction at Belfast, and is expected to be ready for service during 1921. The company's s.s. Rimouski, which was used for transport purposes during the war, and afterwards as a cargo ship, is being fitted up at Belfast for passenger service.

The Admiralty Court at Halifax, N.S., delivered judgment Aug. 27 in the case of the Nova Scotia schooner Frances A. against the Ulster Steamship Co.'s s.s. Downshire Head for damages for the sinking of the schooner in collision off Yarmouth, N.S., in 1919. The judgment awarded \$21,681 to the owner of the schooner and a similar amount to the widow of the captain, who was drowned in the collision. The balance of \$70,000, which was the total of the damages, is being paid as compensation to relatives and other members of the crew who lost their lives and to survivors for the loss of their effects.

Canadian Robert Dollar Co. has issued a schedule of its steamship sailings for the winter of 1920-21, from New York, Vancouver, Karatsu, Shanghai, Hong Kong and Singapore, for the steamships Grace Dollar, M. S. Dollar, Melville Dollar, Harold Dollar, Bessie Dollar and Esther Dollar. The last named ship was purchased in Great Britain recently, and was formerly named Parisian. She is being operated on the company's general route between New York and the Orient, via the Panama Canal and Vancouver, B.C. The dimensions of the Esther Dollar are—length 483½ ft., beam 57 ft., tonnage 7,548 gross, 4,648 net, 11,544 deadweight. She has a speed of 11 knots an hour, with a cubic capacity of 707,328 cu. ft., and fuel capacity of 13,400 barrels of oil. She is fitted with Marconi wireless telegraph equipment.

Maritime Provinces and Newfoundland.

The Lunenburg schooner Charles A. Ritey, while bound from France to Lunenburg, struck on Rose Point, near the entrance to Lunenburg harbor, Sept. 14, and sank, the captain being drowned.

The s.s. Sebastapol is to be placed on the Newfoundland northwest coast route, replacing the s.s. Meigs. It is announced that the Newfoundland Government will place a second steamship on the same route during October.

A St. John, N.B., press report states that a contract for dredging the deep water berths at West St. John, approximately 22,100 cu. ft., scow measure, of sand, gravel and clay, has been awarded to J. A. Gregory, West St. John, at 32c. a cu. ft.

The Dominion Government s.s. Aramora, which went ashore on the west coast of Newfoundland in Dec., 1919, while on her way to lighthouse stations along the coast, with supplies, has been refloated. She was released by her own power, and proceeded, under her own steam, to Quebec.

The schooner Mary L. Oxner, 200 tons register, which was launched by Chester Basin Shipbuilding Co., Chester Basin, N.S., at the end of June, for W. Duff, M.P., Lunenburg, N.S., and which sailed from Lunenburg for St. John's, Nfld., July 29, was wrecked and became a total loss at Silver Cays, Sept. 13.

The suction dredge Toronto, which was towed from Norfolk, Va., for use in the Courtenay Bay development work, and which arrived at St. John, N.B., Aug. 4, as stated in Canadian Railway and Marine World for September, was built in Toronto by Polson Iron Works, and was bought recently by the St. John Drydock & Shipbuilding Co. from the Canadian Stewart Co.

The Nova Scotia Registrar of Joint Stock Companies has given notice that he has revoked the registration of the following companies, at their own request:—Colchester Steamship Co., Stella Maris Steamship Co., Argus Steamship Co., McKenzie Shipping Co., Yarmouth Shipbuilding Co., Schooner Lavonia Ltd., Relwood Shipping Corporation, Inverness Barging Co., Westport Shipbuilding Co., Overseas Shipping Co., Hero Steamship Co., St. Lawrence Shipping Co., Halifax-Le Have Steam Packet Co., Margaree Coal & Ry. Co., Pontiac Steamship Co.,

Noel Shipbuilding & Transportation Co., Magdalen Island Steamship Co., Merchants Transportation Co., Fowler Head Shipbuilding Co., Halifax Graving Dock Co., Falmouth Shipbuilding & Transportation Co.

Province of Quebec Marine.

An order in council has been passed approving regulations for ferry service across the Ottawa River between Sand Point, Ont., and Norway Bay, Que. The passenger fare each way is fixed at 25c., and for automobiles with chauffeur each way \$1.25.

The River St. Lawrence, which has been exceptionally low all summer, is reported from Montreal to have reached the lowest level in four years on Sept. 25, when the 33 ft. channel gauge indicated a depth of 28 ft. 11 in., a drop of 4 ft. 1 in.

The construction of shed 19 on Victoria pier, Montreal, which commenced Aug. 18, is proceeding rapidly, and it is expected that the shed will be completed and ready for use early in October. It is 900 by 100 ft., 2 stories high, with a floor load on the first story of 600 lb. a sq. ft., and it has a flat roof, for cargo purposes, with a floor load of 250 lb. a sq. ft. It is one of three sheds, nos. 17, 18 and 19, under construction. The first two, although not yet finished, have been used during this year.

Ontario and the Great Lakes.

The British Construction Co., which planned to build a drydock at Sault Ste. Marie, has abandoned the project, and has asked for a refund of the \$25,000 which it deposited with the city as a guarantee.

Works is proceeding on the reconstruction of the pier at Cobourg, Ont., the old wooden pier being removed and replaced by a concrete one. W. B. Russell, Toronto, and H. Croft, Cobourg, are the contractors.

An Owen Sound press report states work will be commenced almost immediately on a dock on the east side of the harbor, the dock to be of concrete, approximately 1,000 ft. long, and that the contract has been let to contractors at Peterborough for approximately \$89,700.

The London Railway Commission is reported to be considering the possibil-

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August, 1920:

Articles	Canal	U.S. Canal	Total
Lumber	2,380	38,869	41,249
Flour	168,781	869,410	1,038,221

Total Freight	405,597	12,019,693	12,425,290

after hearing the very straightforward evidence given by all witnesses, that the pilot, W. Gauthier, in passing astern of the s.s. Wisley, followed the natural impulse and ordinary usage of taking the right hand side of the channel, thus avoiding crossing the bow of an anchored vessel when there was a possibility of fouling her cable, hence failing to recognize in time that he was taking a more limited space, and thus committed, in the court's opinion, an excusable error of judgment. The master of the s.s. Metagama, Capt. J. B. Turnbull, and his officers on duty, were exonerated from all blame, and pilot J. B. Angers and Capt. T. S. Bowen of the s.s. Wisley were also held blameless. The court could not criticize their action in anchoring at the place they did, but recommended to all pilots that whenever possible they should anchor in such a place where passing ships will be free from any apprehension as to which side would be the best to select. The evidence showed that all lights and aids to navigation were in order.

St. John, N.B., Pilotage District Regulations.

A Dominion order in council was passed Aug. 25, confirming bylaws recommended by the Minister of Marine for the pilotage district of St. John, N.B., which is now under his control at pilotage authority. The limits of the pilotage district are Musquash Point light, bearing N.W. magnetic, Cape Spencer E. by N. magnetic, distance 8 miles from Part-Ridge Island.

Pilotage dues are provided for allships not exempt under the Canadian Shipping Act, as follows:—

Steamships, inward and outward, \$3 a foot draft; if a pilot is required to go down the Bay of Fundy, an additional

\$2.75 a foot draft with reasonable travelling expenses;

Sailing ships, inward \$2 a foot draft, outward \$1.50 foot draft; if a pilot is required to go down the Bay of Fundy, an additional \$2 a foot draft, with reasonable travelling expenses;

If detention of ship at quarantine exceeds 3 hours, an additional \$5 for the next 24 hours or fraction thereof;

If a pilot is required to go outside of the district, the Superintendent may issue a permit in writing, upon application, naming the pilot, and the ship to be piloted, and the ship engaging such a pilot shall pay in addition to the regular dues and reasonable travelling and other expenses;

Ships under 1,000 tons shall not be required to pay moorage dues, but if a pilot be employed, \$5 a move;

All ships of 1,000 and under 4,000 tons, moorage dues, \$10; 4,000 tons and over, \$15;

Pilotage charges while compasses are adjusted, \$10; trial trips, \$15, and trial trips, where compasses are adjusted at the same time, \$20, in addition to a charge for moorage; if compass adjustment and trial trips are carried out beyond pilotage limits, and exceeding over 6 hours, \$25, and an extra \$10 for every additional 6 hours or part thereof.

Pilotage dues collected must be entered in a cash book provided by the Marine Department and deposited in an authorized bank, and receipts forwarded to the Marine Department's accountant, with a detailed statement of the dues collected. Pilotage dues must not be collected by pilots without authority.

Each pilot, under 70 years of age, at present holding a license, and in active service, shall be examined for eyesight and hearing, and on passing such examination, shall be granted a license, but no license shall be granted to any pilot of 70 years or over, and any such pilot shall be retired and his present license can-

celled. Every person desiring to become an indentured apprentice pilot shall make application in his own writing, and shall be a British subject not less than 16 years old, with the rudiments of an English education and good moral character, and with a medical certificate of physical fitness; on approval he shall be indentured to serve on pilot boats for five years, after which he shall make ocean going voyages as an articulated seaman, and shall produce certificates from the master of ships in which he sails as to his capabilities and character; he shall then appear for examination, and, if successful, a license may be issued to him to act as a pilot. Every person, not an apprentice, desiring to have examination for a pilot's license must apply in his own writing, enclosing a certificate as master of a British sea going vessel, or master in the coasting passenger trade of Canada, and certificate from last employer as to character and habits, and certificate of health from a satisfactory physician. Such applicants must be British subjects, not less than 30 and not more than 50 years old.

The board of examination shall be composed of the Superintendent of Pilots as chairman, an examiner of masters and mates, a member of the pilots' committee, and such other persons as the Minister of Marine may appoint.

When a licensed pilot attains the age of 65, if he is found competent to continue, he may be granted a new license for one year and from year to year so long as he is found competent, until he reaches 70, but such license shall be cancelled upon his failure to pass an examination at least twice in each year.

Temporary pilots may be appointed at a stated sum per day.

Provision is also made for the management of the superannuation fund, under the administration of the Minister of Marine, and penalties are provided for breaches of the bylaws by pilots.

Ships Registered in Canada During June, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Canal Statistics for August.

The Dominion Bureau of Statistics, Ottawa, has issued the following summary of canal traffic for the month of August. The number of ships passing through all Canadian canals was 4,883, against 4,700 in July, and 4,500 in June. The tonnage of cargo carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June. The tonnage of passengers carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June. The tonnage of freight carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June.

At St. Mary's Canal, the total tonnage of cargo carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June. The tonnage of passengers carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June. The tonnage of freight carried was 1,148,860 tons, against 1,148,860 tons in July, and 1,148,860 tons in June.

For the season, there has been 39,575,707 tons of iron ore against 29,407,053 tons down in 1919, an increase of 4,166,654 tons and 39,099,711 bush. of wheat against 36,106,225 bush. in 1919. The ore shipments in 1919 were affected by the strikes. The decrease in the wheat shipments is partially explained by an increase of 5,765,000 bush. by rail east from Fort William and Port Arthur to July 31 over last year. The August shipments by rail and the rail shipments through from the west are not yet available.

There was an increase in the up traffic of 1,617,909 tons, principally in soft coal. Soft coal up, Aug. 1920, 2,533,614 tons; Aug., 1919, 1,189,558 tons. The total soft coal shipments for the season are 5,376,364 tons, against 8,149,369 tons in 1919. The hard coal shipments for the season are 1,124,860 tons, against 1,148,76 tons in 1919.

There is one lock on the Canadian side of the river and four on the U.S. side, two of which are larger than the Canadian lock. The fourth lock was opened Sept., 1919. This explains the great difference in traffic through the Canadian and U.S. locks.

The total freight through the Welland Canal was 346,976 tons down, 22,744 tons up, total 369,720 tons, against 336,337 in Aug., 1919, and 362,626 in July, 1920. Compared with 1919 there were decreases in grain, oil and steel, but an increase of 126,770 tons in soft coal. For the season there has been a net decrease up and down of 95,926 tons, made up chiefly by increase of 1,695,000 bush. of grain, 59,711 tons of oil, and 14,373 tons of steel, and an increase of 126,770 tons of soft coal. There was an increase of 39,202 tons of soft coal in August over July going down.

On the St. Lawrence Canals there was a decrease from July of 99 ship passages, and an increase of 1,666 passengers and 40,920 tons of freight. Compared with Aug., 1919, there was a decrease of 4,204 ship passages and an increase of 1,741 tons of freight. The totals are passengers, up, 5,872; freight, 100,759 tons; down, passengers, 16,441, freight, 130,703 tons.

Compared with Aug., 1919, there was a decrease of 19 ship passages, and an increase of 11,000 tons of freight. The totals are passengers, up, 5,872; freight, 100,759 tons; down, passengers, 16,441, freight, 130,703 tons.

Ottawa Canal.—241 ships, cargoes up, 2,815 tons, down 37,257, total 40,072 tons, against 40,880 in Aug., 1919.

Chambly Canal.—280 ships, cargoes up, 40,646 tons; down, 18,009; total, 58,655 tons, against 39,963, Aug., 1919.

Trent Canal.—1,431 ships, cargoes up, 2,169 tons; down, 6,009 tons; total, 8,178 tons, against 10,205 tons, Aug., 1919.

Rideau Canal.—232 ships, cargoes up, 5,001 tons; down, 5,003 tons; total, 10,014 tons, against 17,109 tons, Aug., 1919.

Murray Canal.—200 ships, cargoes up, 24,088 tons; down, 757 tons; total, 24,845 tons, against 17,539 tons, Aug., 1919. There were 2,649 passengers, against 379 in Aug., 1919; this increase was due to excursions from off the Trent Canal.

St. Peters Canal.—184 ships, cargoes up, 1,221 tons; down, 7,956 tons; total, 9,177 tons, against 8,979 tons in Aug., 1919.

St. Andrews Canal.—31 ships, cargoes up, 1,229 tons, against 1,039 tons in Aug., 1919.

St. John Dry Dock & Shipbuilding Co.'s Bonds.

A public offer was made recently of \$884,276.50, St. John Dry Dock & Shipbuilding Co.'s 1st mortgage 5½% serial gold bonds, dated July 5, 1919, maturing serially from 1920 to 1954, interest payable half yearly, the yields ranging from 6 to 6.125%. Following are extracts from the prospectus:—"The St. John Dry Dock & Shipbuilding Co., Ltd., was organized to build, at St. John, N.B., a graving dock of the first class, together with a shipbuilding yard. The graving dock will accommodate ships of the largest size afloat, and will alone cost \$5,500,000. In order to assist in the promotion and construction of this immense work the Dominion Government, under authority of The Dry Dock Subsidies Act, 1910, and The Dry Dock Amendment Act, 1917, provides a subsidy of \$247,500 a year, payable half yearly. This subsidy is sufficient to meet the principal and interest on the total issue of bonds, amounting to \$3,826,272.34, with interest at 5½%, of which the present issue is the first series. Work having progressed sufficiently, the company is entitled to draw a portion of this subsidy amounting to \$28,599.43 half yearly. This subsidy has been absolutely assigned to

the trustee, and is sufficient to meet interest and principal on bonds amounting to \$884,276.50, which are now offering and which are a part of the total authorized issue.

The subsidy paid by the Dominion Government is irrevocable and assigned absolutely to the trustee, The Montreal Trust Co., to meet the interest and principal on these bonds, and this subsidy cannot be diverted, reduced, changed, or in any way dealt with, but is absolutely the property of the holders of these bonds. In addition, the bonds when issued are a first and only mortgage on all the company's works, plant and equipment. The following paragraph appears on the back of each bond: "The Minister of Public Works of Canada has consented to the issue of the first series of the within bonds totalling \$884,276.50, bearing interest at 5½% per annum, of which this bond is one, and has agreed to pay to Montreal Trust Co., trustee, for the benefit of the holders of the said bonds, \$28,599.43 half yearly on each of the first days of January and July for 35 years hereafter, making in all 70 payments as a subsidy payable to St. John Dry Dock & Shipbuilding Co., Ltd., for work heretofore completed on its dry dock at Courtenay Bay, N.B., in respect to which this first series of bonds is issued."

This bond issue is purely a capitalization of a semi-annual subsidy which the Dominion of Canada covenants to pay, and therefore places this security practically on the same level as Victory Loan bonds. In the case of Victory Bonds, the Government pays interest and principal to the holders direct through the banks. In the case of the St. John Dry Dock & Shipbuilding Co., the Government pays interest and principal to the holder of the bonds through the trustee, The Montreal Trust Co., who in turn pay through the Royal Bank of Canada.

Marine Public Works Contracts.—The Dominion Public Works Department has awarded the following contracts:—Aug. 9, Frontenac Dredging Co., Toronto, dredging at Cobourg, and Kingston, Ont., above Cataragui bridge and on harbor front, class B, at 50c. a cu. yd.; Aug. 1, F. Cogle and H. Perry, Leake, Proctor, B.C., floating wharf at Kuskanoak, B.C., \$7,950; Aug. 21, C. S. Boone Dredging Co., Toronto, dredging at Oakville, Whitby and Bowmanville, Ont., class B, 65½c., 64½c. and 64c. a cu. yd., respectively; Aug. 23, A. Guigere, Shawinigan Falls, Que., repairs to landing pier, Pointe aux Trembles, Que., schedule of prices; Aug. 27, O. Poliquin, Portneuf, Que., repairs and reconstruction of public wharf, Ste. Famille, Que., schedule of prices; Aug. 28, Miramichi Dredging Co., dredging at Grande Anse, N.B., class B, 63½c. a cu. yd.

Speeches on the Shipbuilding Industry, Cost of Operation of Steamships etc.

Canadian Railway and Marine World for September contained an account of the launching at Govan, Scotland, on Aug. 17, of the Canadian Pacific Ry.'s s.s. Empress of Canada, which is to be operated on the Pacific Ocean under the Canadian Pacific Ocean Services management. We have since received fuller reports of the speeches at the luncheon which followed the launching, and which are reproduced below, as they contain a large amount of valuable information in regard to the shipbuilding industry, cost of operation of steamships, etc.:—

R. A. Workman, Chairman, Fairfield Shipbuilding & Engineering Co., said that a wide conception and anxious thought by the owners had resulted in the largest liner yet built by the Fairfield Co. being launched that afternoon, a ship whose size was probably not exceeded by any other passenger ship at present building in Great Britain, and whose launching weight was about 12,000 tons. Her gross tonnage was expected to be about 22,000 tons, and her dimensions were 653 ft. length, 77½ ft. breadth and depth to bridge deck 53½ ft., and her speed at sea 18 knots. She would carry a crew of 550, and would have accommodation for 500 first class passengers, 100 second class, and 240 third class, and in addition would be able to carry 930 Asiatic steerage passengers. The engines are two sets of Brown-Curtis turbines driving twin screws through double reduction gearing—the double reduction gearing being the largest which had so far been constructed. In every way the vessel is a credit to the skill and enterprise in design of Hugh Macdonald, naval architect to the C.P.O.S. Had the Chairman of the C.P.O.S. (G. M. Bosworth) been present, he would have reminded him of a conversation he had with him before the war, when they were discussing the uses of oil fuel. He admitted that the time would come when large passenger vessels would be driven by internal combustion engines, but not in their lifetime. The Empress of Canada would be fitted with boilers designed to burn oil fuel, which was a step superseding coal, and he was not so sure that the day was so very far distant when internal combustion engines would be fitted in ocean liners.

Commander Sir Thos. Fisher, R.N., General Manager, C.P.O.S., said Mr. Workman had referred to the expansion of the C.P.R.'s Pacific fleet. He thought it might interest some of those present to hear a little of its history. Almost coincident with the completion of the railway the C.P.R. chartered a sailing vessel which left Shanghai for Vancouver with a cargo of tea. He believed her name was the *W. B. Flint*; that was in 1886, and it was astonishing to think that in such a short time the service had developed to enable the company to build a steamer of the class of the Empress of Canada. He thought it spoke volumes for the enterprise and energy of the C.P.R. as to justify its building of the largest steamship at present being built in any British yard. The service developed a great deal after the *W. B. Flint*. For he believed the company chartered three steamships, the *Batavia*, *Parthead*, and *Abyssinian*. For some short time the service was run by these ships, and they then laid down three ships which were without equal, and one of these is still running, the famous *Empress boats*.

These ships entered the service in 1891, and one of them, the *Empress of Japan*, is still running with the same boilers that she had when she was built, which, he thought, spoke volumes for British shipbuilding, and he only hoped the Empress of Canada would have an equally long and prosperous life. The service was continued for many years by these three ships. In 1906 it was found necessary to add a fourth ship, the *Monteagle*. Later it was decided by the directors, on the advice of G. M. Bosworth, who had been director for many years of the company's steamship interests, to lay down two other ships, and the Empress of Russia and Empress of Asia were built in that year, and they have proved themselves very successful. They are the finest ships on the Pacific, and they would only be excelled by the ship just launched. The Empress of Russia still held the record for the Pacific. She made the voyage across in 9 days 10½ hours, and he believed that record was not likely to be excelled by the Empress of Canada. The trans-Pacific route was of great interest to business men in Great Britain, because it afforded by far the most rapid means for reaching the far east. He understood under ordinary circumstances they could reach Yokohama in 28 days across Canada, thanks to the C.P.R.'s enterprise in putting on a trans-continental train. It was 28 days, against which it took 55 days to reach Yokohama via the Suez Canal and the eastern route.

One of the directors of the Fairfield Co. had said it was a pity that they were not building another ship similar to the Empress of Canada. He agreed and he was quite sure if the thing were at all possible the C.P.R. would lay down such a ship, but under present conditions it was absolutely unthinkable to lay down a ship of that class today. He had a few figures drawn out to show the difficulties under which shipowners and liner companies labored. The public generally did not realize how great those difficulties were. Some years before the war the Fairfield Co. built a fine steamship for the Atlantic trade. Her cost was \$550,000. He believed the cost of the Empress of Canada would run into \$1,700,000. That was a very serious difference, but it was still more serious looking at it from the point of view of maintenance than it was of capital. He estimated that to cover the difference between these two ships running in the North Atlantic—one built today and one built before the war—insurance, depreciation and interest on capital, would involve a charge on every voyage made across the Atlantic and back of £20,000. The difference between the pre-war and the present day ship running expenses were even more serious. Taking a ship of the type of the *Calgarian*, coal before the war was about \$4,500, now it was \$24,000. Repairs for a round voyage would be \$1,700 and now it would be \$7,700; provisions before the war were \$3,000 and now they cost \$8,000. Wages before the war were \$2,500 and now they were \$9,000. That was not the whole rise in wages. There was another allowance to be made, which was the accommodation taken from passengers for the greater comfort of the crew. In the Empress of France, a sister ship of the *Calgarian*, they had had to give up 266 berths from the earning power of the ship to hand them over for the well-being of the crew. Assuming those berths were only full on one-half

of the voyage the ship made, it meant a further loss of \$5,000. The net effect of these charges meant that the ship now built would cost \$60,000 a round voyage more than a similar ship runing and built before the war. All that money had to be recovered from the passengers, because freight was infinitesimal in comparison with the passengers.

He had heard a great deal of grumbling about the high cost of trans-Atlantic travel at the present time. He said quite frankly that the cost was not half as high as it ought to be in relation to the expenses of the operations and the capital cost of shipping. The *Calgarian* type of ship passenger rates were today, he believed, first class, \$50 10s.; second class before the war, \$11, was now \$28; third class before the war, \$6 10s., now \$19. He gave those figures with all reserve, but they gave a fair and general statement of the situation at the present time. The passenger rates had not increased by more than 180%, whereas the cost of operations, allowing the capital cost involved, had certainly not been less than 350%. That, honestly, was a position that could not be expected to continue for an indefinite period, and the result would be that a very large number of fast ships would necessarily be laid up. One might say, "Well, the shipowner could get it back by raising the fares." When they considered what it meant to pay \$50 for a first class passage to get one berth in a three-berth room, the ordinary minimum rate of \$50 to cross and \$50 to come back and \$28 for the second class, it was very serious, but it was far more serious to pay \$19 for a steerage. He could not conceive anything worse than to charge these immense sums for a man and his family going to Canada or the United States \$19 per person, and yet he had shown this was not sufficient. It meant in the first place that the communication between the different parts of the Empire would be seriously impeded, together with that good feeling that came of knowledge of other people. While the increase in the cost of ocean travel, if it was not stopped, would mean the disintegration of the Empire, it meant there must be fewer emigrants, and if there were fewer emigrants to Canada the tendency would be for them to cross the border rather than to go from the United Kingdom, which, he thought, would be a very disastrous thing for the Empire. Moreover, they could not be spared across the border, and he could not see how it could be filled up from the continent. There would not be sufficient labor to cultivate the fields for the population of Europe to be fed; therefore it seemed to him essential that shipbuilders and shipowners should adopt some means of getting back to less extravagant prices for ocean travel. It was essential for this country.

He was convinced that some economy could be effected in shipbuilding by better organization, and combinations which had been brought about recently in the shipbuilding world; by improved methods of standardization, and possibly by some reduction in profits. At any rate he commended to shipbuilders the necessity for reducing costs. For his own part he did not believe that any directors would lay down ships unless they knew what they were going to cost, and he thought the first thing was for shipbuilders to so stabilize the building that the

The C.G.S. Montcalm.—We have been officially advised that the report that a contract for repairs to this ship, amounting to approximately \$100,000, has been awarded to Canadian Vickers Ltd., is without foundation.

The Dominion Shipbuilding and Repair Co's Affairs.

Osler Wade, F.C.A., interim liquidator, has made the following report on the affairs of the Dominion Shipbuilding & Repair Co. Ltd., Toronto, which went into liquidation on July 31.

Upon taking possession of the assets, I found the company had been operating upon three ships under contract, one for the Gulf Navigation Co. Inc., and two for the Dominion Marine Department. In addition to this, there was a small contract recently commenced, for a yacht for Geo. H. Gooderham, of Toronto, and two stock hulls, nos. 12 and 13, upon which also only a small amount of work had been done.

The contract with the Gulf Navigation Co. contained a penalty clause, providing for \$1,000 a day upon default, and, on July 31, \$46,000 of penalties had accrued and been deducted from payments on account. To complete this contract would have involved a loss of at least \$60,000 to the ordinary creditors, apart from the question of further penalties, and to complete the contract with the Marine Department would have involved a loss of at least \$200,000 to the ordinary creditors. This loss would have been taken out of dividends due to the unsecured creditors, for the benefit of another class of creditors, and, of necessity, the work was abandoned by the liquidator. The cash received on account of the Gulf Navigation Co. was secured by a mortgage on its ship and the material delivered and allocated to it. The owner, under power given it in its contract, is now proceeding with the completion of its ship at its own expense and under an arrangement approved of by the court. The moneys received from the Marine Department were not secured by a mortgage, but under the statutes and orders in council, the government claims ownership of the two ships and the material delivered and allocated to them. The liquidator has intimated to the Marine Department his willingness to co-operate, so that any loss sustained by the government may be reduced to the minimum, either by the liquidator continuing the work on a cost plus basis, or by permitting the government to proceed itself, all, on the understanding that the ownership of the ships and materials delivered and allocated as of July 31 is to be determined by the court. The parties interested under these two contracts may have considerable claims against the estate for damages, and this is reflected in the statement of affairs.

It will be some time before inventories of stores and material on hand are completed, and of necessity the figures reflected in the statement of affairs are taken from the costing records, but may be considered as approximately correct. The same remarks apply to the tools. No depreciation has been written off the original cost of machinery, plant and equipment and the company has never paid any dividends.

Provided the Government shops are completed at the estimates given in the statement of affairs, the contracts will represent a profit to the insolvent company of \$182,000, being the difference between the monies received to date on account of same, and the charge for work done to July 31, plus the ranking liability of \$237,000. This profit of \$182,000 forms a part of the surplus in the statement of affairs.

Under a direction of the court, the liquidator attended at New York and

interviewed Christoffer Hannevig regarding the question of his indebtedness, and as to any suggestions, or proposals, from him, regarding a settlement with the creditors and the re-opening of the plant. Mr. Hannevig informed the liquidator that he had purchased all the share capital in the Pusey Jones Co., of Wilmington, Del., for \$6,000,000, which he paid in cash, and, that shortly afterwards the plant had been taken over by the United States Government; that during the interim he had not received any returns from the United States Government apart from advances of \$5,000,000 for enlargements to the works, etc.; and that the U.S. Shipping Board had awarded him \$2,000,000 as compensation over and above the \$5,000,000 previously advanced. The whole question of this transaction is now the subject of litigation in U.S. courts, the government claiming a set off on the award of about \$3,800,000. Mr. Hannevig claims to have considerable other interests, including sole ownership of Hannevig & Co., bankers, New York, N.Y., but that being tied up, he could do nothing regarding his account. Upon declaring his inability to attend this meeting and upon refusing to deliver up the monies on deposit in his bank, the court issued an order to commence proceedings for the recovery of the amounts. Mr. Hannevig stated that his reason for refusing to release the monies on deposit in his private bank was looking to the fact that he had guaranteed to the Equitable Trust Co. deliveries of steel, aggregating \$110,000, and was holding the amount on deposit as a set-off against the guarantee. This excuse is remarkable, for the reason that this guarantee was arranged for the purpose of reducing Mr. Hannevig's indebtedness to the company, and the liquidation of this guarantee to the trust company on steel deliveries would have represented a total reduction of over \$400,000 in his account since May 31 and left free for the purposes of the company the amount on deposit in his private bank.

In discussing an arrangement with creditors, Mr. Hannevig confined himself to reorganization on the basis of: (1) Canadian Government help for the erection of a dry dock to take care of the business on the Great Lakes. (2) Installation of paper making and pulp machinery to take care of the Canadian trade, covering which the Pusey Jones Co. held orders which he could turn over to Toronto, along with the necessary experts. (3) Discussed, as arguments in favor of reorganization, a large order to be placed by the French Government in Canada for building of some 60 ships, and orders to be placed by the Argentine Government. To these suggestions Mr. Hannevig had nothing to offer as support from his end, in the way of cash, not even the liquidation of his own account.

The immediate cause of this failure was insufficient liquid assets to retire the wage claims of some \$106,000, but there were three factors which contributed to the company's failure, and if the directors' meeting is to consider the appointment of a committee to enquire into the question of reorganization, the following factors are worthy of consideration: (1) Insufficient capital. (2) Labor and management. (3) Inability to collect amounts due.

The capital invested in this business was \$1,000,000, as compared with \$1,600,000 invested in fixed assets for the plant,

etc. It is quite obvious that, instead of having any working capital, the company has a liability to the extent of \$600,000, or that the working capital was \$600,000 less than nothing, making it necessary to rely upon loans and advance payments on contracts to conduct operations.

The labor and material costs per ton on hulls laid down to July 31 were as follows:—

	Labor.	Material
1918	\$46 a ton.	\$76 a ton.
1919	19 a ton.	116 a ton.
1920	61 a ton.	95 a ton.

and on the last hull in 1920 the labor cost \$73 a ton and material \$94 a ton, the net result being that the last hull was laid down at a loss of \$300, to which must be added penalties of \$72,000, increasing the loss to \$72,300.

The arrangements with labor at the time of closing down was for a 5-day week of 44 hours, with double time for Saturdays, and overtime. The management is to be congratulated for dropping ships in the water as rapidly as it did, but from the figures which are quoted it is quite apparent the policy of a closed shop has had its effect on labor costs, which were constantly increasing, while the cost of material has been decreasing since the peak last year. There may be considerable argument in favor of the closed shop theory, when conditions are universal, provided it is not in restraint of trade; but the shipbuilding industry, in so far as ocean traffic is concerned, is quite distinct from most other industrial enterprises, for the reason that ships built at one point upon the globe, compete for freight traffic with ships built at any other point on the globe, the competition being exclusively in the charges made for carrying freight. Of necessity, the capital expenditure on ships built in any one market must be on a basis to compete with the capital expenditure of ships built in any other market. Therefore, if the shipbuilding industry in Canada is to succeed, the capital outlay in construction must be on a competitive basis with the capital outlay in construction in any other markets, or failing in this, a government subsidy to equalize any differences. Shipbuilding labor appears to have overlooked this factor in Canada and the result is going to be that if the condition is not faced by labor and by management, the industry cannot succeed and compete with ships built at a lesser cost at other points. This factor, and a survey of the plant by competent experts, regarding the question of sufficiency, adaptability, etc., should be considered in any re-organization.

Without making any provision for immediate payment to the ordinary creditors, it would require at least \$500,000 or \$600,000 to carry out a reorganization, one-half to retire the secured and preferred claims, and the balance for working capital. If this cannot be realized from the accounts receivable, then it might be by an issue of debentures sufficient to retire these secured claims, and the balance might be raised by an issue of preferred shares. These shares could be preferred in any distribution of assets among shareholders, and issued to control management, provided the present shareholders were considered to the extent of their equities, after making proper depreciation on the plant and etc. The ordinary creditors, apart from the Marine Department, might make

Increases Authorised in Freight and Passenger Rates on Atlantic Coast, Gulf of Mexico and Great Lakes.

The United States Shipping Board gave the following decision, Aug. 24, on the application of water carriers, operating on the Atlantic coast, Gulf of Mexico and Great Lakes, for authority to increase rates:—This proceeding was instituted by the Board of its own motion, to determine the justness and reasonableness of certain proposed advances in the rates, fares and charges of water lines engaged in interstate commerce, on the Atlantic coast, Gulf of Mexico and Great Lakes. The tariffs and applications naming the rates, fares and charges in question were filed with the Board on and subsequent to Aug. 11, and were proposed to be made effective on Aug. 26, contemporaneously with the effective application of the rates, fares and charges approved by the Interstate Commerce Commission, as to rail and water traffic, in its ex parte docket 74 (See Canadian Railway and Marine World for September, pg. 478).

Sec. 18 of the Shipping Act of Sept. 7, 1916, imposed upon common carriers by water in interstate commerce, subject to the Board's jurisdiction, an obligation to give to the public and the Board 10 days notice of proposed advances. By the terms of the act such advances cannot become effective until their approval by the Board.

Prior to the expiration of the statutory period, following the receipt by the Board of the tariffs and applications here under consideration, protests against the operation of the same were lodged with the Board by shippers and commercial organizations. The Board thereupon directed that the tariffs then on file, together with those which thereafter might be filed, be suspended, and that all applications for permission to advance rates be consolidated. An order was so entered on Aug. 12, instituting a general investigation in the premises, and the matter was set down for hearing on Aug. 18. Commercial organizations, shippers, and the public were notified by telegraph, by mail, and through the press, of the time and place of the hearing, and all interested parties were given an opportunity to be fully heard. Notwithstanding the protests which had been filed with the Board in advance of the hearing, however, it developed at the hearing that there was no concerted opposition to a general increase in rates. Representatives of shippers stated frankly that they did not object to reasonable advances in rates, as they realized that carriers had been and were confronted with increases in the cost of operations, including labor, materials and other items; and they recognized the fact that in many, if not in most, instances, some increases should be made in the rates, in order that the carrier's revenues might be fairly remunerative. Most of the testimony on behalf of shippers was directed towards specific situations, which they conceived to be discriminatory, or detrimental to their respective interests. It will be recognized, of course, that howsoever important these matters may be to individual shippers, such evidence is not illuminative in determining whether or not the proposed advances in rates as a whole are reasonable and will yield a fair return, or more than a fair return, upon the value of the property of the carriers devoted to the public service.

Atlantic Coast and Gulf Lines.—The

general advances proposed by the lines operating between Atlantic Coast and Gulf ports were as follows:

		Freight, Passenger.	
Between ports on Atlantic Coast north of Norfolk, Virginia	40%	20%	
Between Norfolk and New Orleans, La.	25%	20%	
Between New Orleans and the Mexican border	35%	20%	

These applicants seek to justify the proposed advances, on the ground that the present rates are not sufficiently remunerative, in view of the prevailing high operating costs, and that the rates should be advanced to enable them to earn a reasonable return upon the value of their property devoted to the public service. Inasmuch as the Board is not empowered to prescribe accounting rules and systems to be observed by the carriers subject to its jurisdiction, the financial and statistical data submitted in support of the proposed advances were in varied and dissimilar form, not susceptible of reduction to a common basis. It has, therefore, been necessary to consider such data by individual carriers rather than en bloc. The operating results reflected by these varied statistics are substantially identical, however, and may be illustrated by the following summaries:—

An examination of the exhibits and testimony submitted by the Merchants & Miners Transportation Co. shows that on June 30 the book value of its property devoted to the public service, including floating equipment, wharves, and other necessary terminal property, was \$3,842,419.56; that for the six months ended June 30 its total operating revenues were \$3,021,971.31, and that its total operating expenses during the same period were \$3,574,972.46, leaving an operating deficit for the six months of \$553,001.15. After making allowances for miscellaneous income and expenses, this deficit was increased to \$694,196.25. Figures submitted by this carrier showed an insured valuation of the above described property of more than \$6,000,000.00, which it was stated represent only 80% of its actual value. The advances proposed by the Merchants & Miners Transportation Co., in addition to those allowed that carrier by the Interstate Commerce Commission, assuming that the volume of traffic to be handled by it does not diminish, were estimated to yield, for six months, increased revenues of \$1,019,051.95, practically all of which it was anticipated will be absorbed by operating expenses. It was asserted that the Merchants & Miners Transportation Co.'s revenue requirements, as a matter of fact, necessitate a larger increase than that petitioned for, but that any greater increase would seriously disturb existing rate relationships and thereby retard the movement of traffic. The six months covered by the above statistics were represented as comprehending a period when the company was operating at maximum capacity; and it was stated that the volume of traffic handled at any other period would not be nearly so heavy. It was testified that the costs of operation resulting from increases in the cost of materials, fuel, supplies, labor and every other element of transportation, were abnormally heavy and that there was no present indication that they would decline to any great extent in the very near future.

Conditions governing the operations of other Atlantic coast and Gulf lines are substantially similar to those above set forth, except that at some ports not served by the Merchants & Miners Transportation Co. conditions are even more unfavorable. The record shows that for the period ended June 30, 1920, the Eastern Steamship Lines, Inc., sustained a loss of \$539,831.07, and that for the year ended Dec. 31, 1919, the operating deficit of the Clyde Steamship Co. was \$1,357,953.00, and of the Mallory Steamship Co. \$643,165.00. Applications and data submitted by certain carriers in respect of water line operations between New York, on the one hand, and the Canal Zone, the Virgin Islands and Porto Rico on the other hand, reflect the operating conditions shown above, including unprecedented costs and inadequate returns with resultant losses.

Great Lakes Lines.—The advances proposed by the Great Lakes carriers approximate 40% on freight and 20% on passenger traffic. It appears from the record that expenses incident to the operation of vessels on the Great Lakes have increased substantially to the same extent as on the Atlantic coast. For example, it was shown that the carriers are now paying for bunker coal approximately 100% more than they paid in 1919, and they claim to be receiving a poorer quality than was then available. These carriers also claim that they are paying 60% more for materials and supplies, and 40% more for labor, than they paid in 1919. A situation existing on the Great Lakes which does not confront the carriers operating on the Atlantic and Gulf coasts, is that the Great Lakes operations are seasonal, and during several months of the year some of the carriers are obliged to discontinue operations on account of weather conditions. During this non-operating period the overhead and fixed charges of the carriers remain fairly constant.

Some stress was laid by shippers upon the fact that the past performances of a few of the Great Lakes Lines had shown substantial returns on their property. It must be borne in mind, however, that we are dealing with present conditions, and, whatever those statistics may show for past years, they cannot be said to reflect the results of operations under the high costs and other unfavorable conditions existing at the present time. The book value of the terminal facilities and fleet operated by the Great Lakes Transit Corporation is \$4,087,887.00, according to the record. For the six months ended June 30, its gross revenue was \$1,077,295.00, and its operating expenses were \$1,194,411.38, a deficit of \$117,116.38. It was claimed that the market value of the company's property is \$10,000,000. The Cleveland & Buffalo Transit Co. showed a net loss to June 30 of \$193,115.89. The Goodrich Transit Co. sustained a net loss of \$77,905.83, for the year ended June 30. These figures fairly represent the results attained by other Great Lakes carriers in the operation of their respective lines. There is ample evidence of record to support the claims of the Atlantic, Gulf, Great Lakes and territorial lines, regarding the increased costs of their operations, and their need for additional revenue; and the increases for which they have respectively applied will produce not more, and

Dockyard Foremen's Positions.

The Civil Service Commission gave notice recently that applications would now be received from persons qualified to fill the positions of dockyard foremen at an initial salary of \$2,400 a year, which will be increased, upon recommendation for efficient service, at the rate of \$120 a year until a maximum of \$2,760 has been reached. This initial salary will be supplemented by the bonus provided by law for the present fiscal year.

Duties.—Under direction of the Chief Engineer (Dockyard) to have charge of the work performed in the shops and yard of a government dockyard; to supervise construction of and repairs to ships; and to perform other related work as required.

Qualifications.— Education equivalent to high school graduation; either graduation in engineering from a school of applied science of recognized standing, with at least three years of experience in naval dockyard work, or a complete term of apprenticeship with a large well established engineering firm and at least five years experience in charge of engineering, construction, and repairing ships in a dockyard; preferably training in naval work and procedure; thorough knowledge of hull and machinery construction and repairs, and the construction and repairs of yard equipment; ability to handle and direct men, and to organize and execute dockyard work; tact and good judgment.

Examination.—Subjects and weights as follows: education and experience, 3; oral interview, if necessary in the Commission's opinion, 2.

A list of eligibles will be established for vacancies in the above class throughout the Dominion, but the only vacancy required to be filled at present is that of Dockyard Foreman, Halifax Dockyard, N.S., Naval Service Department. In the case of this position, preference will be given to residents of Nova Scotia.

The U. S. Shipping Board has adopted a resolution providing, under the Merchant Marine Act, that steamship owners may be relieved from war and excess profits taxes under certain conditions; that all departments, bureaus, boards and commissions of the U. S. Government are directed to recognize the American Bureau of Shipping as their agency for classification of ships owned by such bureaus, and for such other purposes in connection therewith as are proper functions of a classification bureau; that in all cases the Board's approval of type and kind of ship shall be on condition that said ships shall be constructed in accordance with the American Bureau of Shipping's rules.

A new type of marine engine has been introduced in Great Britain. The ordinary type of oil engine has a single piston in each cylinder, this piston compresses a mixture of air and oil vapor against the end of the cylinder and the consequent ignition forces the piston outward and thus provides the driving power of the engine. In this new type the ignition takes places between two pistons in one cylinder, forcing the pistons apart. Each piston is connected to the crank-shaft—an arrangement which gives a very even-turning movement to the shaft. Other advantages are claimed, including a very marked saving in space, which is very important on board ship, and improved "scavenging" (clearing the products of combustion out of the cylinder). The design lends itself to the replacement of steam engines in ships without alterations of the shafts or propellers, as the double piston arrangement gives the low propeller speed of 110 revolutions a minute with an actual piston speed of 450 ft. a minute, equivalent to 900 ft. a minute in the ordinary type of oil engine. Two 1,000 h.p. engines of the new type are being built.

Canadian Defence Device.—London, Eng., cablegram, Sept. 13.—To H. A. Clift, a Canadian engineer, is given the credit for the construction of two "mystery towers," built to the order of the British Admiralty for defence purposes during the war, and one of which was towed yesterday from Shoreham to Portsmouth. It will be used there chiefly as a mark for navigation, but originally, it is said, it was one of 16 between which anti-submarine nets were to have been spread, and which were to be crowned with powerful searchlights. These towers are erected on ships of 10,000 tons each, but after being floated to their new positions, their air spaces will be filled with concrete and they will be allowed to settle on the bed of the ocean.

Germany will, it is said, after delivering up the ships required by the peace treaty, have a total of 501,910 tons, compared with 5,108,600 in August.

Canada Steamship Lines' s.s. T. P. Phalen, which was sunk near Iroquois Point in the St. Lawrence River during August, and which was abandoned to the underwriters, has been finally given up as a total loss. Of her cargo of 64,000 bushels of wheat about 22,000 bus. of dry grain were saved and a considerable quantity of wet wheat. The equipment and fittings have been removed as far as possible, and further attempts at saving the hull have been given up. It is stated that there was \$200,000 insurance on the whole, \$40,000 disbursement insurance and \$75,000 trip freight insurance.

The name of the s.s. Captain Hemans, owned by A. Sutherland, Port Arthur, Ont., has been changed to A. B. Sutherland.

At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian Locomotive Co., Kingston, Ont., made a profit of \$367,969.02 for the

year ended June 30. Its highest profits were \$892,976.33, in 1918-19, and the lowest \$134,613.89, in 1914-15, the average from 1912-13 to 1919-20 being \$492,698.51 a year. The annual report states that the strike of 1919 extended into 1920, completely cutting off production for the first three months, which, together with the great difficulty in securing materials owing to the strike and embargoes on U.S. railways, affected the company's output very materially. Sufficient contracts are on hand to keep the works going up to Jan. 1, 1921, before which time undoubtedly further contracts will be closed. The directors for this year are: F. G. Wallace, President; J. L. Whiting, K.C., Vice President; Aemilius Jarvis, Chairman of the Board; W. Casey, General Manager; Jas. Carruthers; M. J. Haney; W. Harty, Jr.; Robt. Hobson, W. Y. Soper.

Flannery Bolt Co., Vanadium Building, Pittsburg, Pa., has issued a catalogue of the F.B.C. welded flexible staybolts, and tools for installation.

Franklin Railway Supply Co. of Canada, Transportation Building, Montreal, has issued Bulletin 975, describing and illustrating the locomotive booster.

The Holden Co. Ltd., Montreal, railway supplies, etc., has appointed D. M. Brown, manager for Ontario, with office at 342 Adelaide St. West, Toronto.

The Superheater Co., Transportation Building, Montreal, has issued a set of bulletins, dealing with stationary and marine superheaters, as follows:—Superheater on small locomotive; superheater for stationary power plants; advantages of the Elesco method of superheating; advantages of superheated steam; results from superheating a power plant on the Nickle Plate; fire tube marine superheaters, steamship Pearl Shell; marine pyrometers; higher superheated

FOR SALE

Under this heading Canadian Railway and Marine World will place advertisements for Positions Wanted, Positions Vacant, Equipment for Sale, Tenders Wanted, Dividend, Annual Meetings, Legal Notices, etc.

Three steam tugs and one stern wheeler, about September 1st, now plying on the Saskatchewan River, between The Pas and Sturgeon Landing.

S.s. "Minasin," length 60 ft., width 13.2 ft., registered tonnage, 26.16, n.h.p., 6, speed about 9 miles, screw propelled.

S.s. Sam Brishin, screw propelled, length 47.5 ft., width 11 ft., n.h.p., 4.2, registered tonnage 7.38, speed about 7 miles.

S.s. Notin, screw propelled, length 48 ft., width 10 ft., registered tonnage 12.06, n.h.p., 4.16, speed 8 miles.

S.s. City of Prince Albert, stern wheeler, length 96 ft., width 20 ft., registered tonnage 38.92, n.h.p., 6.6, speed 8 miles an hour.

Any further information as to price, or further description, of these boats will be furnished on application to the Mandy Mining Company, G. R. Bancroft, Superintendent, The Pas, Manitoba.

FOR SALE

At a Bargain

Steam screw wood steamer of 64.73 registered tonnage.
Built in 1890 in New York. Length 115.8', breadth 23.9'.

Two covered decks and one awning deck. Compound engine 12 1/4" x 24" x 17" of 150 I. H. P., built by Montclair McLay Company in 1890.

Horizontal Internal Marine Boiler, diameter 90", length 11'-3 1/4", 115 pounds working pressure. Built by Robt Engineering Company in 1896.

Engine, shafting and pumps in good condition.

Boiler needs a few repairs. Last test 115 pounds—two years ago.

Hull not in best of condition.

Address all enquiries to the

Cape Breton Electric Co., Limited, Sydney, Nova Scotia.

Position Vacant

Wanted for a small Electric Railway in the Canadian West, a manager with all-round knowledge of electric railway work. One who can handle employees and get on well with the public. Must furnish first class references as to character, habits, etc. Please address Cunningham & Company, Booth Building, Ottawa, stating salary and if services available about November 1st.

It Pays

to carry an advertisement in the Canadian Railway and Marine World every issue of the year because you obtain proportionately better

ships to marine power plants, marine auxiliaries.

Whiting Corporation.—The Whiting Engineering Corporation, of Harvey, Ill., and the American Railway Equipment Co., of New York, N. Y., have been consolidated as Whiting Corporation, with authorized capital of \$5,000,000. J. H. Whiting, President, Whiting Railway Equipment Co., Secretary, Chairman of the Board, and V. E. Miller, President, American Railway Equipment Co., Sales Manager, Machine Co., and Engineering Department, Manufacturing Department, Secretary, President. At the time of man-

ufacture of the component companies do not overlap, it is the intention to maintain all present manufacturing facilities. The Whiting plant at Harvey will retain the manufacture of cranes, engines, hoists, tumbling mills, rope covers and all other items of the Whiting line, together with card and blast equipment and shaft drivers. Solid cutting machines, charging tracks, core machines, and steel flasks will comprise the bulk of work at the new American Co.'s plant at 2935 West 47th St., Chicago, under the direction of E. A. Rod, Jr. Moulding machines, galls, flask specialties and pattern

making material will continue to be manufactured at the American Co.'s plant at York, Pa., in charge of R. S. Rod. The plants include maintaining and repairing the present offices of the American Railway Equipment Co., 506 Madison Ave., New York, as the eastern sales and export office of the combined lines.

Wilt Twist Drill Co. of Canada, Walkerville, Ont., has published an elaborate catalogue of drills, reamers, and cutters, giving descriptions of the different styles and types, with suggestions for their proper use.

Snow Fighting Equipment.

By W. H. Winterrowd, Chief Mechanical Engineer, Canadian Pacific Railway.

The earlier portions of this paper were published in Canadian Railway and Marine World for September and October.

Grand Trunk Pacific Rotary Ploughs. Fig. 32 shows a rotary plough built by the Bucyrus Co. for the Grand Trunk Pacific Ry. As far as the writer has been able to learn, only two of these ploughs were built. The wheel is of a modified scoop type, and has 10 radial scoops, the inner ends of which are fastened to a steel casting keyed to the main shaft. The general form of the scoop is the same as in the rotaries described previously, except that the adjoining edges of the scoops are brought straight out towards the face of the wheel. The flanges of a heavy hinge casting are placed over the double edges thus formed. This casting is fastened by rivets passing through both flanges and the adjoining edges of the scoop plates. Near the outer periphery of the wheel, heavy braces or spacer bars are applied between each hinge casting. The cutting blades are double edged and made of cast steel. Each blade adjusts itself automatically and independently and no connecting links are used. The inner ends of five of the knives are carried close to the center of the wheel; the other five knives are shortened so that they will not interfere with the longer ones.

Union Pacific Rotary. — Four rotary snow ploughs were built by the Union Pacific Rd. The cutting wheel is built up around a cast steel center secured in the usual manner to the front end of the

of the wheel. The outer ring is of mild steel 1 x 4 in. section. Between the inner and outer rings are riveted two types of cast steel arms. Each alternate arm is provided with bosses for hinging knives. The front edges of the ½ in.

operated by air and the cutting wings are heavily braced in working position. When not in use, the wings are drawn in by means of levers operated by a hand screw. The boilers on these ploughs are equipped with superheaters. The use

Fig. 33. Canadian Pacific Ry. Heavy Rotary Snow Plough.

plate partitions are riveted to the arms without bosses. The plain arms also serve as stops for the knives, which are double edged and of cast steel, and which

of highly superheated steam provides a substantial increase in power and reduces the consumption of fuel and water, enabling the plough to remain out longer without running for an additional supply.

Canadian Pacific Heavy Rotary.—The greatest test of a rotary snow plough is its ability to cut through snow slides. The plough can be subjected to no heavier service than one which is occasionally required on all roads crossing the Rocky, Cascade and Selkirk Mountains. The snow in these slides is not only packed exceedingly hard, but often contains trees and rocks. It is impossible for rotaries to overcome such obstacles. It is generally customary to probe the slide with sounding rods to locate them, and, if possible, they are removed by blasting, or by being pulled out. Sometimes, however, these obstacles are not discovered and when the plough encounters them the ordinary cutting knives are generally damaged and the plough often put out of commission. The repair of the knives is generally difficult and slow.

During the winter of 1908-09, Mr. George Bury, then General Manager, Western Lines, C.P.R., decided that a plough was needed which would not break down, and he stated that he wished a rotary plough with cutting knives of 2 in. armor plate, and the rest of the plough built in proportion. The following spring, authority was given for two such ploughs and arrangements were made with the Montreal Locomotive Works for their construction. H. H. Vaughan, then Assistant to the Vice President of the C.P.R., engaged John Playter, Consulting Engineer of the American

Fig. 32. Grand Trunk Pacific Ry. Rotary Snow Plough.

wheel shaft. This casting is spool shaped. The front is 50 in. in diameter and contains a number of spokes. On three of these spokes the small center cutting knives are hinged. The outer ring of this center casting forms the inner ring

adjust themselves independently without connecting links. These knives are hinged to the bossed steel arms by means of continuous pins. A drop nose and very substantial cutting wings are fastened to the front casing. The drop nose is

to construct the frame, to permit the plough to be uncoupled both ends. As a result it was decided to construct the

wheel direct in marine engine style and that the frame of the plough should resemble a bridge similar to thoroughly

cutting knives and scope of exceeding 1/2 inch plate, and all other construction in proportion, would have resulted in a wheel that was impractical. A wheel, however, was built which was quite different from any others and which was unusually strong. The wheel was made of cast steel. As no facilities were avail-

Cutting Knives and Nose Piece.

Fig. 37. Cast Steel Segment.

construction of existing ploughs. It was Mr. Vancouver's idea that better results could be obtained by driving the plough

support the casing or hood. This idea has been justified, as the ploughs operate with practically no vibration. It was decided to build the ploughs, incorporating these ideas. The finished ploughs are shown in figs. 33 and 34, and are the largest and most powerful that have ever been built.

The design of a tremendously strong and rugged wheel was one of the most important problems. To have made the

Fig. 38. Assembled Wheel, without Cutting Knives.

Fig. 43. C.P.R. Heavy Rotary Snow Plough Wheel, being balanced.

Fig. 44. Completed Wheel in Place, on C.P.R. Heavy Rotary Snow Plough.

able for machining or annealing a casting of the required size, a built-up construction was used. The center casting, the front and back of which is shown in figs. 35 and 36, was made in octagon form 80 in across the flats. Fig. 37 shows one of

the eight segments which were bolted to the faces of the center casting. These segments follow the curved form of a scoop wheel and have at the outer edges 6 in. diameter bosses for 2½ in. diameter hinge pins. The segments are bolted

fore the cutting knives are attached. This view shows the 1¼ in. thick by 10 in. wide band bolted to the segments, and which helps hold them in place. The band is increased in thickness to compensate for the hinge pin and bolt holes.

Fig. 45. Arrangement of Engine and Wheel, C.P.R. Heavy Rotary Snow Plough.

Fig. 46. Arrangement of Engine and Wheel, C.P.R. Heavy Rotary Snow Plough.

Fig. 47. Main Frames, with Gusset Plates in Position, C.P.R. Heavy Rotary Snow Plough.

to the center casting with 2¼ in. diameter bolts. The adjacent segments are bolted together through flanges at their rear edges.

Fig. 38 shows the wheel assembled be-

This band is made in section with L shaped lugs on each end which fit into grooves in the segments.

Fig. 39 shows the inside of one of the massive cast steel knife blades. Figs.

40 and 41 are other views of these blades and show how they are heavily ribbed. These blades are ¾ in. thick at the cutting edge.

Fig. 42 shows the nose piece for the center of the wheel. Fig. 43 shows the completed wheel, without the nose piece, being balanced. As shown in this view, the wheel weighed 24,000 lb. and as it was designed to run at 400 revolutions per minute it was necessary to balance it accurately.

Fig. 44 shows the finished wheel in place on the plough.

Figs. 45 and 46 show the arrangement of engine and plough. The casing is made of ¾ in. plate and tapered to eliminate any flat surfaces on which snow or ice might accumulate. The bottom of the casing is reinforced by an additional ¾ in. plate. The back of the casing consists of steel castings with flanges for attachment to supporting gusset plates. This view also shows the boiler and engines in place, as well as the taper wheel fit on the front end of the main shaft. The main shaft is 11½ in. in diameter and 12 ft. 2 in. long. The front bearing is 11½ in. in diameter by 28 in. long. Behind the front bearing is a marine type thrust bearing with 10 collars. There is a rear bearing 10 in. in diameter by 16½ in. long. The thrust bearing, which is peculiar to this plough, is intended to take up the thrust ordinarily received by the back wall of the wheel casing. It has proved of decided benefit in service. The engines are of the marine type and have cylinders 20 in. in diameter and 24 in. stroke. The steam chests are cast integral with the cylinders. The supporting columns are cast steel. As head room was limited, the connecting rods are short in proportion to the stroke, and the area of the cross-head bearing surfaces was increased accordingly. The crank pin of the engine was connected to a crank disc on the rear of the wheel shaft by means of a drag link coupling. This was used in case there should be any variation in alignment of the wheel shaft and engine crank shaft and to prevent any bending strains from being transmitted from one to the other. Duplicate reverse lever and throttle are provided so that the engine can be operated from either side.

Fig. 47 shows the main frames and gusset plates which support the casing. The frames are box girders 36 in. deep at the front end. The outside plate of the girder is ¾ in. thick and the inner ½ in. thick. The top and bottom members are 13 in. ship channels. The boiler applied to these ploughs is similar to those of the Canadian Pacific class M-4 consolidation type locomotives. It has 2,108 sq. ft. of heating surface and 44 sq. ft. of grate surface, and is of greater capacity than any boilers that have been used for snow plough service. The trucks are of the 6-wheel type specially designed for the purpose, and have cast steel frames. The axles have 7 x 12 in. journals, and the steel tired wheels are 34 in. in diameter.

In working order, these ploughs weigh 260,000 lb. The weight is practically equal on the two trucks. The tender has a water capacity of 7,000 Imperial gallons and holds 16 tons of coal. The tender was made 32 ft. long over end frames, as, on account of bridge limitations, it was necessary to separate the weight of the plough from the weight of the pushing locomotives. The tender trucks are of the 4-wheel, equalizer pedestal type, using standard engine truck wheels and axles. An officer who has used them

states that the flangers are quite sufficient in dealing with small trees. They burn at times 2 to 3 inches. He also states that the small work in which the cutting flangers are placed under the

up the track and to clear out the space between the rails for a depth of from 2 to 4 in. Flangers are generally used. Flangers are applied either to the front of the locomotive, temporarily to the

knife-like blade, one end of which was pivoted to the nose of the locomotive pilot. It was lowered and raised by means of lever connections from the locomotive cab, and when down in working position was practically parallel to the side of the pilot. The blade was made in two pieces. The lower one, which could readily be removed or replaced, formed the cutting plate or shoe, and was attached to the upper one by means of springs.

An improved type was known as the Priest flanger. Its general arrangement is similar to that of the Ray type described later, except that it was raised and lowered through a system of levers similar to those of the Temple and Miller flangers, the motive power being supplied by an air cylinder bolted through the running board of the locomotive. The

Figure 48.

Fig. 49. The Ray Flanger.

Fig. 50. The Ray Flanger.

Fig. 51. The Ray Flanger.

Figure 52.

plough somewhat slower in its progress through a slide, but the flanger does not work when it strikes obstructions such as rocks and trees.

Flangers. In order to properly clean

cars or flat cars, or permanently to snow ploughs or flanger cars. Fig. 48 shows one of the early type of flangers used on locomotives. It was known as the Temple and Miller type. It consisted of a

manufacturers of the Priest flanger developed the Ray flanger. This widely used flanger is shown in figs. 49, 50 & 51. These illustrations show how the air cylinders for raising and lowering the flangers are bolted to the cross tie which connects the front end of special equalizers. The flanger is held in raised position by means of a strong spring in each cylinder. The air is used only to keep the flanger down in operating position. These flangers make a cut 2 in. deep on the inside of the rail and 1 in. deep on the outside. The total width of the cut is about 20 inches. Air for the cylinders is supplied from the locomotive main reservoir, the operating valve being located in the cab within easy reach of the engineer. Ray flangers are made in different styles. By extending the inner edges of flanger blades a very useful combination snow plough and flanger is made. Such a type

is shown in fig. 52, illustrating various types of pilot ploughs. For double track operation, a single cutting plate extending the full width of the trackway is used.

As stated previously, flangers are applied to snow ploughs of various types. Sometimes flangers are attached to a special car. The smallest flanger car

raising the flanger is contained within the car. The majority of the large cars are equipped with two flangers in order that the car may be operated in either direction. On some roads the flangers are hung from the underframe of the car between the trucks. On other roads they are placed at the ends of the cars outside the trucks. Figs. 53, 54 and 55

has developed and is using a type of ice cutter shown in fig. 57. This cutter is applied to the plough of a Jordan spreader car. The cutter consists of 29 2 in. square cutting tools of hardened steel, ground to a point at the bottom end. These knives are carried in a flanged channel which is fastened to the plough at the front of the spreader. This method of attachment permits the entire cutter to be raised and lowered by the existing spreader mechanism. Fig. 57 shows the cutter in working position. Figs. 58 and 59 shows the cutter entering a snow and ice covered track and leaving it in clear condition.

Sweepers. — For removing ordinary light snows in yards, a few roads have used the well known street railway type of sweeper. A sweeper of this type is shown in figs. 60 and 61. The revolving brooms at each end of the sweeper are operated by means of a single cylinder reversible steam engine located in the body of the car. This engine takes steam from the locomotive pushing the sweeper. The broom shaft is driven by means of a chain drive. The writer has been advised that these cars are very efficient in removing light snow, and particularly in cleaning up terminals and terminal yards.

Operation of Equipment. — All snow fighting equipment should be in good condition before the start of the snow season. This is best accomplished by means of a definite summer repair programme. Snow fighting conditions vary greatly. Some roads, in order to determine the probable weather conditions, keep in close touch with the government observatories, which advise the localities or areas in which storms exist or are probable.

Operation of equipment usually starts with the beginning of a storm. In clearing snow under ordinary conditions, pilot, push and wing plows are generally run at a good speed, in order that the snow may be thrown well clear of the track. If a good speed is maintained, the ploughs will frequently go through a cut without stalling, whereas, if the speed is slow the plough may catch or stall half way through the cut or drift, with the result that it may be stuck or buried and have to be shoveled out.

Particular care should be used upon approaching a cut, particularly one with a side drift at the entrance, as with a double track plough sufficient side pressure may develop to cause derailment. Such an approach is generally squared off before pushing the plough into it. If the snow is too deep for the plough to handle, it is leveled off by shoveling until reduced to a reasonable depth. The man in charge of the snow plough must be one with considerable initiative, as weather and snow conditions vary greatly, and situations frequently arise which call for good judgment and quick decision.

Rotary snow ploughs are handled in an entirely different manner from the push and wing ploughs. Instead of depending upon speed to get through the drifts, the rotary plough approaches the drift slowly and the cutting wheel is fed into the drift instead of bucking it. A snow bank or slide is generally approached at a speed of about 3 or 4 miles an hour with the rotary wheel revolving about 150 revolutions a minute. When coming close to the obstruction the speed of the wheel is increased, and the pusher engines keep moving just fast enough to keep the plough up against the drift. If the pusher engine crowds the rotary too much the pilot signals the locomotive

Fig. 53. Flanger Car.

Fig. 54. Flanger Car, Canadian Pacific Railway.

Fig. 55. Flanger Car, Canadian Pacific Railway.

is practically a 4-wheel truck to which flangers have been applied. A platform is built over the truck and carries the operating mechanism as well as a load of heavy material to hold the flanger down to its work. The large flanger cars are ordinarily of the caboose type, and are usually equipped with two 4-wheeled trucks. The mechanism for lowering and

show some different types of flanger cars. Some of the various styles of flangers used under such cars or other equipment are shown in fig. 56.

Ice Cutters. — The formation of ice around and over tracks in yards is a cause of great delay. Removal by hand is slow and retards switching operations. To remove such ice quickly, the C.P.R.

work of the rotary is to increase the speed of the wheel. To save the motor engine and to avoid the rotary, the plan should be made to use the rotary to clear the snow from the track. The rotary should be moved with the engine, the motor should be started, the rotary should be moved to the position of the pusher to shut off the motor. The rotary should be moved to the position of the pusher to shut off the motor. In some cases the rotary is used to clear the snow from the track. The rotary should be moved with the engine, the motor should be started, the rotary should be moved to the position of the pusher to shut off the motor.

When the rotary is used to clear the snow from the track, the rotary should be moved with the engine, the motor should be started, the rotary should be moved to the position of the pusher to shut off the motor. In some cases the rotary is used to clear the snow from the track. The rotary should be moved with the engine, the motor should be started, the rotary should be moved to the position of the pusher to shut off the motor.

the style shown in the 62. The horizontal plate which is attached to the top of the rotary of the rotary is used to move drifting snow backward and to cause it to pile upon the outer side of the fence. Some roads use a portable fence, the alternating panels of which form an A design.

Permanent fences may be of any recognized type, but are usually of boards placed close together, although in some cases stone fences have been used. The writer has been advised that metal lath or metal fences have proved satisfactory under some conditions.

Trees.—One of the Canadian roads uses spruce hedges and finds this a very satisfactory method of forming a snow barrier. The distance at which trees or hedges are spaced or planted from the track depends entirely upon local condi-

falling or drifting snow. The valley type shed is generally placed against an embankment in such a way that a slide will pass over the roof of the shed without falling on or damaging the track. The sheds are ordinarily braced with crib-work backed with earth or gravel. Several years ago at Rock River, the Union Pacific Rd., constructed a very interesting permanent snow shed of concrete sections fitted together. This shed covered a track which had in previous years given a very great deal of trouble on account of deep drifting snow.

The question of preventative measures is a very large one. The writer has not felt it within the scope of this description to more than make reference to the best known methods.

Conclusion.—In conclusion the writer wishes to acknowledge his very great indebtedness to J. S. Leslie, one of the Leslie Brothers, whose ingenuity and untiring efforts have made possible the operation of our railways under severe winter conditions. His assistance and collection of data and photographs were placed at the disposal of the writer and made it possible to complete the historical review of the subject. The writer also wishes to acknowledge his indebtedness to the various railway and manufacturing companies, particularly Q & C Co., and the American Locomotive Co., for information placed at his disposal. Acknowledgment is also made to H. H. Vaughan for much valuable information. Additional illustrations are shown on pages 587 and 588.

American Railway Association's Mechanical Committees.

As stated previously in Canadian Railway and Marine World, the officers of the American Railway Association, Section 3, Mechanical, for the current year are W. J. Tollerton (Chairman), General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., Chicago; J. Coleman (Vice Chairman), Assistant to General Superintendent, Motive Power, and Car Department, G.T.R., Montreal; V. R. Hawthorne, Chicago, being Secretary. At a recent meeting of the general committee, committees were appointed to serve until June, 1921. Following is a list of the committees, with the names of their chairmen, and also names of officials of Canadian railways, allied lines, etc., who are members of the committees.

General Committee.—W. J. Tollerton (Chairman), General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., Chicago; J. Coleman (Vice Chairman), Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal; W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal.

Nominating.—F. W. Brazier (Chairman), Assistant to General Superintendent, Rolling Stock, New York Central Rd., New York.

Arbitration.—T. H. Goodnow (Chairman), Superintendent, Car Department, Chicago & Northwestern Ry., Chicago, Illinois; J. Coleman, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal, Que.

Prices for Labor and Material.—A. E. Calkins (Chairman), Superintendent, Rolling Stock, New York Central Rd., New York; I. N. Clark, Master Car Builder, G.T.R., London, Ont.

Arrangements.—W. J. Tollerton, (Chairman), General Mechanical Superintendent, Chicago, Rock Island & Pacific Ry., Chicago; J. Coleman, Assistant

Figure 56.

Fig. 57. Ice Cutter, Canadian Pacific Railway.

casing and the scoops, after which the wheel will clear itself. Rotary ploughs should not be forced through snow deeper than the hood. When the snow is deeper than the hood the top bank should be shoveled off. In slides or ice formations the top of the obstruction is frequently loosened by blasting.

The successful operation of the rotary depends greatly upon the manner in which it is handled, and it is highly essential that the men on both the rotary and the pusher engines should be experienced men.

Preventative Measures.—At points where it is known that snow will drift it is usual to construct snow fences; these may be either temporary or permanent. The usual temporary snow fence is about 7 ft. high, frequently of

tions. On the C.P.R., tree planting has been done in selected localities, species native to the locality being used. Along the north shore of Lake Superior jack pine and spruce are utilized. In Quebec spruce and balsam and some cedar are used. The trees, when planted, are generally not over 30 in. high. The practice of using hedges and trees for this purpose is quite general in Europe. When properly planted, hedges and trees not only give snow protection but enhance the appearance of the right of way.

Snow Sheds.—On roads passing through mountain territory where slides are frequent, snow sheds are generally used for protection. Snow sheds are of various types and built to suit local conditions. The level fall type is of box-like section and used simply to protect the road from

to General Superintendent, Motive Power and Car Department, G.T.R., Montreal.

Autogenous and Electric Welding.—J. T. Wallis (Chairman), Chief of Motive Power, Pennsylvania System, Philadelphia.

Car Construction.—W. F. Kiesel, Jr.

Assistant to General Mechanical Superintendent, Northern Pacific Ry., St. Paul, Minn.; G. E. Smart, Mechanical Assistant, Car Department, Canadian National Rys., Toronto.

Couplers and Draft Gears.—R. I. Kleine (Chairman), Assistant Chief of

Train Brake and Signal Equipment.—T. L. Burton (Chairman), Consulting Air Brake Engineer, New York Central Rd., New York; W. J. Hatch, General Air Brake Inspector, C.P.R., Montreal.

Car Wheels.—W. C. A. Henry (Chairman), General Superintendent, Motive Power, Pennsylvania System, St. Louis, Mo.; W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal; L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Rd., Chicago, Illinois.

Locomotive Construction.—H. T. Bentley (Chairman), Superintendent, Motive Power and Machinery, Chicago & Northwestern Ry., Chicago; W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal.

Design and Maintenance of Locomotive Boilers.—G. H. Emerson (Chairman), Chief of Motive Power and Equipment, Baltimore & Ohio Rd., Baltimore, Maryland.

Feed Water Heaters for Locomotives. F. M. Waring (Chairman), Engineer, Tests, Pennsylvania System, Altoona, Pa.; W. H. Sample, General Superintendent, Motive Power and Car Department, G.T.R., Montreal.

Fuel Economy and Smoke Prevention. William Schlafge (Chairman), Mechanical Manager, Erie Rd., New York; W. H. Sample, General Superintendent, Motive Power and Car Department, Grand Trunk Railway, Montreal.

Mechanical Stokers.—M. A. Kinney (Chairman), Superintendent, Motive Power, Hocking Valley Ry., Columbus, Ohio.

Loading Rules.—R. L. Kleine (Chairman), Assistant Chief of Motive Power, Pennsylvania System, Philadelphia, Pa.; E. J. Robertson, Superintendent, Car Department, Soo Line, Minneapolis, Minn.

Manual.—W. E. Dunham (Chairman), Assistant Superintendent, Motive Power and Machinery, Chicago & Northwestern Ry., Chicago; W. J. Robider, General Master Car Builder, C.P.R., Montreal.

Safety Appliances.—C. E. Chambers (Chairman), Superintendent, Motive Power and Equipment, Central Railroad of New Jersey, Jersey City.

Specifications and Tests for Materials. F. M. Waring (Chairman), Engineer, Tests, Pennsylvania System, Altoona, Pa.

Subjects.—Willard Kells (Chairman), General Superintendent, Motive Power, Atlantic Coast Line Rd., Wilmington, N.C.; W. H. Sample, General Superintendent, Motive Power and Car Department, G.T.R., Montreal.

Tank Cars.—A. W. Gibbs (Chairman), Chief Mechanical Engineer, Pennsylvania System, Philadelphia.

Amalgamation of other Mechanical Organizations with Section 3—Mechanical, of American Railroad Association.—W. O. Thompson (Chairman), General Superintendent, Rolling Stock, New York Central Rd., Buffalo, N.Y.

Car Repair Shop Layouts.—I. S. Downing (Chairman), General Master Car Builder, Cleveland, Cincinnati, Chicago & St. Louis Ry., Indianapolis, Indiana; W. J. Robider, General Master Car Builder, Canadian Pacific Railway, Montreal.

Design, Maintenance and Operation of Electric Rolling Stock.—G. C. Bishop (Chairman), Superintendent, Motive Power, Long Island Rd., Richmond Hill, N.Y.; L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Rd., Chicago.

Engine Terminals, Design and Operation.—C. E. Fuller (Chairman), Superintendent, Motive Power and Machinery, Union Pacific Rd., Omaha, Nebraska;

London Railway Terminals, Tracks, Etc.

N. Cauchon, C.E., Ottawa, who was engaged by the London, Ont., City Council, to advise as to civic improvements, has presented a preliminary report. Among other things, he recommends elevation of railway tracks throughout the city and then says:—"It is recommended that union passenger terminals be sought on an elevated cross-town line, at right angles between the elevated tracks of the two railways and midway through the long blocks between Waterloo and Colborne Sts. The station trackage proper should enlarge (six or eight) from King St. northward over Dundas St. to Queen's Ave. or farther as may become necessary, and with provision in design for progressive expansion. The station building should occupy the block between Dundas St. and Queen's Ave., with access to the platforms from beneath."

He also recommends that the terminal should be municipally owned and leased to a terminal company in which the railways and city would be represented for joint operation at a price which would pay carrying charges, interest, operation and maintenance. The cross-town tracks could be laid on an earth embankment or carried on trestles. If the latter plan is adopted the suggestion is made that a covered market with ample storage room could be placed in the block between King and Dundas Sts. under the tracks. The plan would be to have all passenger trains coming in over the G.T.R. tracks, pass the station over the cross-town line, and leave the city via the C.P.R. tracks. The C.P.R. trains would in the same manner leave on the G.T.R. tracks. Then at a short distance east and west of the city suitable interswitching facilities would be provided so the trains could again regain their respective roads.

The Ontario Association of Architects gave consideration to the general plan at its annual meeting in London recently, and passed a resolution of approval.

Fuel Oil for French Railways.—The great scarcity of coal has caused the Paris, Lyons & Mediterranean Ry. to transform some of its motive power from coal to fuel oil consumption, which is about to be followed by the Chemin de Fer de l'Etat, or state owned railway, and locomotives at its shops at Saintes are undergoing changes for experimental purposes. Much attention is being directed to the announcement that the first named company is planning to equip 200 locomotives for fuel oil and install numerous storage reservoirs, of from 40 to 100 tons capacity, at various points on its lines.

Location Betterments on Canadian National Railways.

By Henry K. Wicksteed, B.A.Sc., Chief Locating Engineer, Canadian National Railways.

Present construction and studies for location betterments on the Canadian National Rys. may best be understood by a brief review of early railway building on the Canadian Northern. The principal component of the lines composing the Canadian National Rys. System is that of the Canadian Northern. This was financed, designed, and built, as everyone knows, by the firm of Mackenzie & Mann, both members of which were not only very able business men and financiers, but had had a long previous experience in contracting on the Canadian Pacific, and an absolute confidence in the resources of Canada and its future. They knew personally a great many of the older engineers, and others who had been identified with the construction of the older road, and they gathered about them a number of these men who knew the topography of Canada as no one else could know it, and the weak points of the older roads as well as the strong. Under these circumstances it is not surprising that the Canadian Northern, from Montreal and Toronto to Vancouver, has the reputation of being the best long distance line on the continent in proportion to cost, and the best on this continent from an economic point of view means the best in the world. Some day justice will be done to the extraordinary talent and vision of these two men. Public opinion is even now swinging round in that direction. The successful man has always a great crowd of detractors, but as a successful man remarked to me a few days ago, it is easier to make and keep a reputation than to do things. These men attempted the impossible and

tions for some 25 miles between Toronto and Ottawa. Grades of 1.5% were reduced to 0.5%, while the other construction was going on, and finished simultaneously, the stations being left in their original positions, and the existing business of the line being left undisturbed. A still more important link in the main chain between Montreal and Quebec was the Great Northern of Canada, completed

sated to 0.60% compensated. This provided for nearly one half the distance between Quebec and Montreal, and two fifths of that from Quebec to Hawkesbury. Nine miles of the remainder was taken up by a sharp drop into the St. Maurice valley, and an equally sharp rise on the opposite side, and of the remainder all but 30 miles was on the great Montreal plain, and where the grades were at all objectionable, they were all so short as to be easily reducible by ordinary steam shovel work.

The St. Maurice depression, involving as it did the moving of a station and raising of a bridge over the river, has been left alone for the present, and is being worked as a special short division, but this 30 miles, involving some long 1% grades, became one of the first studies of the Canadian National staff. Surveys showed that these could be reduced to 0.60% by the construction of some 14 miles of new line, and 4° curves substituted for the 8° standard now obtaining, and that the capitalized value of the change would amount to some \$5,000,000 or more, while the cost was estimated at \$1,500,000, but this cost was largely made up by that of four steel viaducts over as many rivers. The existing bridges, which had been standing some 20 years, were none too heavy in the first place, and quite unequal to modern loads, and rebuilding them in the new sites was somewhat cheaper than in the old. The amount chargeable to grade revisions therefore, was less than \$500,000 and it needed little argument to convince the directorate that the expenditure was a good investment. Work on these

Canadian National Railways Lines in the Quebec District.

about 1900, and itself composed of older roads coupled together. It extended originally from Hawkesbury, on the Grand Trunk, 60 miles east of Ottawa, to Riviere a Pierre, on the Quebec & Lake St. John, and was intended as an overflow route for the somewhat heavy flow of grain then going east from the Georgian Bay at Parry Sound to Quebec. One

Betterments under construction on St. Lawrence Subdivision, Canadian National Railways.

got away with it. Two farmers' sons built 10,000 miles in less than 20 years.

Part of this system in the east was composed of acquired lines which were linked together and sometimes acted merely as feeders to the parent system; sometimes formed part of the main line itself. They had nearly all been finished years before, and in location features higher standards demanded at the present day. One such road was the Bay of Quinte, which was used with modifica-

hundred miles of this route, from Quebec to the St. Maurice, was made up of two colonization roads, the Lower Laurentian and the Quebec & Lake St. John, and had a number of grades of 2%, and curvature as sharp as 10°, in combination.

The newer portion had been built to a 1% standard. The most objectionable part of the combination was eliminated by building a new line from the St. Maurice River, 80 miles, to Quebec, which reduced the distance some 17 miles, and the ruling gradient from 2% uncompen-

changes has actually been commenced.

Meantime the traffic on the Quebec & Lake St. John, a little separate system of 280 miles, built as a colonization road, had grown very rapidly, owing to the development of the wood pulp and paper industry in the Saguenay basin, and its 1.5% grades (and on the Quebec end 2%) had become very expensive to maintain and operate. Most of this traffic goes to and beyond Montreal, and leaves the Q. & L. St. J. at Riviere a Pierre, running over the 40 miles of the Lower Lauren-

Projected Railway and Industrial Development in Quebec.

is planned to be built with 21 miles of track, to run from the St. Mary River, The National Transportation By-Path, at the mouth of the Lanaudière River, to the town of St. Maurice, and thence, to carry the same traffic to and from Montreal and the little suburban station of St. Hubert, to be built near the junction of these two grades to the same high standard, are well advanced and well commencing, but obviously to a considerable extent, with considerable changes in elevation, it cannot be expected that much of the old line will remain. It is possible, however, to retain all the station and traffic points in use. Otherwise there would be a very serious rebellion among the good people of the Province of Quebec.

Last in importance perhaps, and farthest away from the great trade centers, but among the most interesting of all, are the studies on the Quebec & Lake St. John itself. One hundred and twenty-five miles north of Quebec City is the Town of Chicoutimi. Many Canadians have never heard of it, and probably the great majority of Americans. Yet it is a seaport nearer to Europe than any in the United States. Within 50 miles of it are a million horsepower of water running to waste. Within 150 miles are some of the greatest spruce forests of the world, and at its doors, and extending more than 50 miles, are 1,000 square miles of good agricultural land. In this city, and on this land, are 50,000 to 60,000 industrious and thrifty French Canadians. From Canada, the United States, and both England and France, capital has come freely in the past, and is still coming for investment in pulp grinding and paper making. To the westward, and tributary to this city are mineral areas which have caused at least one flurry of excitement. Quebec has perhaps the sanest population, and the most progressive and business like government of any province in Canada. This combination is a hard one to beat, and many people are realizing it. One chance acquaintance on the train in midwinter had come all the way from Kansas City, merely to look into the chances for profitable investment.

Under these circumstances, it is only natural that the traffic on the Quebec & Lake St. John should increase, and that it should look forward to economic development and improvement in grade and curvature, and possibly, in the more remote future, to electrification. At every few miles along its line are rivers with minor waterpowers which can be developed easily and cheaply. Few of them perhaps are large enough to justify a transmission line to distant localities, but quite large enough in the aggregate to keep a railway going, and probably so evenly distributed that a high-tension line and converters would be unnecessary. This matter of electrification of Quebec lines will soon be well worth studying, but the question of grade reduction and increasing at moderate expenditure the train load by 50% or sometimes over 100%, remains relatively just as important. Electrification will reduce or nearly eliminate the coal bill. Grade reduction will reduce both coal and wages in proportion to tonnage. Both expenditures will probably soon be worthwhile. The accompanying plans and profiles show one of the most interesting of the problems under construction and study.

A press-report states that a large project for industrial expansion in the province of Quebec is taking shape, embracing the construction of a railway from Hudson Bay to the Seven Islands, passing by Lake Mistassini, Lake St. John and Chicoutimi, to enter Quebec by the Montmorency Valley, which would shorten the route from Chicoutimi to Quebec by 100 miles; the establishment of pulp and paper mills at Seven Islands and at other places where there are important water powers along the line of the railway, and the erection of steel works at Chicoutimi and at Quebec. The project, according to reports, is being promoted by a syndicate with which Lord Burnham, principal proprietor of the Daily Telegraph, London, Eng., and Lord Desborough, who is a member of the Grenfell family of financiers, are members. The area within which the project, according to the report, is to be carried out, extends from Seven Islands on the St. Lawrence River, through Saguenay and Chicoutimi counties, and northerly and northwesterly to Hudson Bay, and it is proposed to build a railway from Chicoutimi to Quebec City. During the past two years there has been considerable exploratory work done in this region, and several charters have been secured from the Quebec Legislature, authorizing railway construction, development of water powers, navigation rights, etc., while land subsidies for the building of 200 miles of railway have been provided and are available for any company undertaking to build the lines specified. Following are particulars of the companies incorporated having construction rights in the area.

The Quebec Legislature in 1919 incorporated two companies, one the Quebec & Ungava Ry. Co., and the other the St. Felicien & Ungava Ry. Co., of both of which Viscount Templeton, London, Eng., the Earl of Clarendon, London, Eng., and Pickering, Ont.; B. Spring Rice, Burwash, Sussex, Eng.; and H. C. Thompson, London, Eng., were provisional directors, and J. T. Ross, Quebec, was a provisional director of the second named company. The Quebec & Ungava Ry. Co. was authorized to build a railway from Seven Islands, in Saguenay County, on the north shore of the St. Lawrence River, northerly to Lake Menikow, thence westerly or northwesterly to the most suitable harbor between the mouth of Big River and Nastapoka Sound on Hudson Bay, with branch lines. The St. Felicien & Ungava Ry. Co. was authorized to build a railway from St. Felicien, St. John County, to Lake Mistassini, thence to Lake Nichikuin and to Lake Petitsikapau, or by an alternative route between the first and the last named points. During the winter of 1919-20 several parties connected with a syndicate with which the provisional directors of these two companies were associated, carried on explorations in the territory through which these lines were projected.

At Seven Islands, the Clarke interests carried on extensive developments, including the building of Clarke City, with wharves, and a power and pulp plant, in connection with which a railway was built during the construction period. A recent report stated that the Clarke properties had been sold to a syndicate, which proposed to make extensive developments in the region.

The Quebec & Chibougamau Ry. Co. was incorporated by the Quebec Legisla-

ture at its last session to build a railway from Quebec northerly through Quebec, Montmorency, Charlevoix and Chicoutimi counties to Chicoutimi, to the Saguenay River, and thence through Chicoutimi and St. John counties to Lake Chibougamau, with branch lines.

The Quebec Legislature at its last session voted a subsidy of 4,000 acres a mile, not convertible into money, to a company building a railway from near Chicoutimi, on the Quebec & St. John Ry., to St. Felicien, to the west of Lake St. John, running through the regions situated east and north of the lake, as well as branch lines, the total length of main line and branches subsidized being 120 miles. The Legislature, at the same time, voted a similar subsidy to a company to build a line from Malbaie to Ha Ha Bay, in the St. John Lake district.

A recent press report stated that the Quebec Ry., Light & Power Co. was negotiating the sale of its charter for the operation of a steam railway, and such part of its lines as was used for that purpose, to a syndicate interested in the development of the province. This piece of line might be useful in connection with the building of a line to Chicoutimi.

[See Quebec Subsidies for Railway Construction, Mar., pg. 122; Quebec & Ungava Ry., May, 1919, pg. 254; St. Felicien & Ungava Ry., May, 1919, pg. 254; Quebec & Lake Chibougamau Ry. Co., Aug., pg. 428; Quebec Ry., Light & Power Co., Oct., pg. 557.]

Proposed Enlargement of Niagara Railway Arch Bridge.

A recent press report stated that a conference had been held between Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, and the owners of the Niagara Railway Arch bridge in reference to the use of the bridge by radial electric railways, which would necessitate four tracking it.

We are officially advised that the bridge is an international one, controlled by two companies, the Niagara Falls Suspension Bridge Co., incorporated in Canada, and the Niagara Falls International Bridge Co., incorporated in the United States. The officers of the Canadian company are:—President, C. Riordan, Montreal; Secretary-Treasurer, J. H. Ingersoll, St. Catharines, Ont. H. G. Dickinson, Niagara Falls, N.Y., is superintendent of the bridge.

The G.T.R. operates the railway portion of the bridge, leasing the upper deck, and the proposed widening could not be accomplished without its consent, as the bridge tracks terminate, on one side, on G.T.R. property, in use for its terminal purposes.

Plans for adding two more tracks have been prepared by Chas. Ewan Fowler, C.E., New York, N.Y. It is proposed that the four tracks on the upper deck shall have a capacity for E.70 locomotives and that the lower deck will have two electric railway tracks in the center, two 20-ft. roadways, and two 10-ft. sidewalks. Mr. Fowler says that it is hoped to have progressed far enough so that construction may be started next spring. He is also engaged on plans for the proposed Windsor-Detroit bridge.

Lucerne Railway Club Ltd. has been incorporated under the British Columbia Companies Act with authorized capital of \$2,000, to carry on a social club.

The Dominion Government's Decision in the Appeals Against Increases in Freight and Passenger Rates.

The appeals against the Board of Railway Commissioner's judgment of Sept. 6, authorizing increases in railway freight and passenger rates, full particulars of which were given in Canadian Railway and Marine World for October, were heard at Ottawa Sept. 29 and 30 by Right Hon. Arthur Meighen, Prime Minister; Sir George Foster, Minister of Trade and Commerce; Sir James Loughheed, Minister of the Interior; Right Hon. C. J. Doherty, Minister of Justice; Hon. C. C. Ballantyne, Minister of Marine and Fisheries, and of Naval Defence; Right Hon. A. L. Sifton, Secretary of State, and Hon. B. W. Wigmore, Minister of Customs and Inland Revenue. The appellants were represented by counsel, etc., as follows:—Manitoba Government, H. G. Symington and Alex. McDonald; Saskatchewan Government, D'Arcy Scott; City of Toronto, G. R. Geary, K.C.; Toronto Board of Trade, A. C. MacMaster; Winnipeg Board of Trade, J. B. Coyne; Wholesale Grocers Association, Hugh Blain; Dominion Millers Association, C. B. Watts; Nova Scotia apple growers, J. Finn. The railways were represented by W. N. Tilley, K.C., and F. H. Chrysler, K.C. The Dominion Government's decision was announced Oct. 7, in the form of an order in council, which is now published in full, for the first time, by Canadian Railway and Marine World, as follows, only portions of it having been published elsewhere heretofore:—

The following report of the committee of the Privy Council was approved by the Governor General on Oct. 6. The committee of the Privy Council have had under consideration certain petitions to the Governor General in council asking for the exercise of the powers conferred upon him by sec. 52 of chap. 68 of the Statutes of Canada, 1919, intitled The Railway Act, 1919, to vary or rescind an order of the Board of Railway Commissioners for Canada, dated Sept. 6, 1920, fixing certain increases in freight rates, passenger fares, sleeping and parlor car rates and excess baggage. Counsel and representatives of the various petitioners have been heard and, as well, counsel for the railways affected. Consideration has been given to the various cases cited and exhibits filed.

The order appealed against is made by the Chief Commissioner and concurred in by Assistant Chief Commissioner S. J. McLean, Deputy Chief Commissioner, Hon. W. B. Nantel, K.C., and Commissioners A. S. Goodeve and J. G. Rutherford, being all the commissioners who presided at the hearing. The increases authorized by the order may be briefly stated as follows:—

Until Dec. 31, 1920, 40% on eastern freight rates, 35% on western freight rates, 20% on eastern and western passenger fares, not exceeding 4c. a mile, 50% on sleeping and parlor car rates, 20% on excess baggage.

The first three to be reduced on Jan. 1, 1921, to 35% on eastern freight, 30% on western freight, 10% on passenger fares, to July 1, 1921; after July 1, passenger fares to be reduced to rate prevailing before the order.

Provision is also made in the order that the Canadian Pacific, Grand Trunk and Canadian Northern Railways shall furnish monthly returns of operating revenues, and the right is reserved to

the Board to make such readjustment of rates as may be justified by such returns. The increases provided for are noted in the order to wholly expire on July 6, 1922, unless in the meantime Parliament extends the provisions of sec. 325 of the Railway Act, enabling such order to be longer effective. To the above general increase there are, however, the following exceptions fixed:—On coal, increases limited as follows: In rates 0 to 80c. a ton, increase 10c.; over 80 to 50c. a ton, increase 15c.; over 150c. a ton, increase 20c. On milk, no increase. On crushed stone, sand and gravel, no increase. On cordwood, slabs, edgings and mill refuse, only 10%. On commutation fares and on minimum class rate as established by order in council 1863 and on local switching rates, milling in transit diversion, reconsignment, stopovers, demurrage and weighing, no increase. Upon examination of the monthly returns, filed as above provided, it will be the duty of the Board, should a reduction in costs of materials or other services warrant, to reduce rates accordingly.

It appears that the application of the various railways was for a general increase, without limitations, of 40% east and west on freight traffic, of 20% on passenger fares, of 50% in sleeping and parlor car rates, of 40% on milk and 20% on excess baggage.

In connection with this appeal it must be observed that one of the duties, if not indeed the principal task, of the Board of Railway Commissioners, is to determine upon application, what are fair and reasonable rates to be charged from time to time for the various services performed by public utilities under the jurisdiction of the Board. In such determination there must of course be taken into account, as has been done in the present case, all relevant circumstances, such as changes in the scale of wages, and the cost of materials, the effect of competitive means of carriage whether by lake route or by lines to the south, and such other facts as may be established and as are found pertinent to the issue by a lawfully constituted judicial tribunal. For the purposes of this work the Board of Railway Commissioners not only has the advantage of hearing the evidence, and following the cross examination, but brings to bear the experience of its own members, extending in many cases over a considerable number of years, and the familiarity with railway problems thus acquired. It has, in addition, at its disposal, a permanent staff of expert officials, trained in the various branches of the Board's work and able to advise the commissioners in the many intricate and more or less technical subjects that are before the Board for adjudication. It follows that a decision of the Board, so arrived at, as to what may constitute under all the circumstances a few and reasonable rate, could not, except for extraordinary cause, be usefully reviewed by your Excellency's advisers. Indeed, for your Excellency's advisers to take upon themselves to weigh the evidence adduced and substitute their own judgment for the judgment of the Board upon the question of fact arising on the issue, and to be determined upon such evidence, would defeat the purpose for which the Board of Railway Commissioners was created and would in the end

be highly prejudicial to the public interest.

The committee of the Privy Council is, however, of opinion that if it should be disclosed in the order or established in argument that the Board in coming to a conclusion on the evidence submitted (in this case as to what is a fair and reasonable rate) had applied principles which it should not have applied, principles which the committee of the Privy Council consider not in consonance with public policy, such appropriate action should be taken as will lead to a finding in which only correct principles will be applied.

In the case under consideration the terms of the order disclose on pages 286 and 287 of the Judgments, Orders, Regulations and Rulings of the Board, that in determining what would be a fair and reasonable rate, the Board took into account as one element for consideration, the requirements of the Canadian National Rys. System, which system as constituted now includes within its mileage railways of great extent, and involving heavy cost of operation, which must be held to have been built, not as purely railway enterprises of a business character, but in a substantial degree for colonization and other purposes. The reorganization of this system, looking to the better utilizing of these lines is, moreover, now only under way. Railways so constructed cannot, under the best of operation, on any practicable scale of rates, be made, for some time at least, a financial success. A system largely composed of such roads and in such state of reorganization, would not therefore appear to your Excellency's advisers to be properly at the present time a factor for consideration in the solution of a rate-making problem. What constitutes a fair and reasonable rate should now be arrived at without reference to the requirements of the Canadian National Rys. System and your committee recommends that the order in this case be referred back to the Board, to be corrected in its findings in such manner as to determine what are fair and reasonable rates, without taking into account at all for the time the order shall be in effect, the requirements of the Canadian National Rys. System.

Very strong representations were made at the argument on appeal, to the effect that the order continued, and indeed intensified, an unjust discrimination in rates, it being claimed that higher freight rates prevail generally in western Canada, that is west of Fort William, than prevail in eastern Canada, that is east of Fort William. It was strongly urged that the reasons, whatever they may have been, for this differential, no longer exist, and that as a matter of public policy the principle of equalization of rates east and west should now be recognized. On the other hand, it was urged that the competition arising out of lake and river transportation, and as well out of lower competitive rates on eastern United States lines, compelled a somewhat lower scale in eastern Canada than in western Canada. Whether or not these reasons now obtain in any substantial degree, is a question which requires minute and expert investigation, such as can be best conducted by the Railway Commission itself and not by your Excellency's advisers, but the committee is

Traffic Orders by Board of Railway Commissioners.

Increase in Through Rates Between the United States and Canada.

General order 313, Sept. 22.—Re general order 303, Aug. 13, 1920, providing that the proportions of through rates, fares, and charges between the United States and Canada, in both directions, in effect at the date of the order, accruing within Canada, may, by general or blanket supplement to existing tariffs, be increased to conform to the increased rates, fares, and charges authorized by the Interstate Commerce Commission by order dated July 29. Whereas by Special Permission 50,480, dated Washington, D.C., Aug. 26, 1920, the Interstate Commerce Commission authorized U.S. carriers, or their agents, to file, upon one day's notice, special supplements correcting increased rates and charges filed under but not in conformity with its order dated July 29, as amended Aug. 11 and 18, it is therefore ordered that the Board's general order 303 be amended to provide that the said corrections, where necessary, be made in the general or blanket supplement authorized by the general order 303, upon one day's notice.

Coal Rates from Telkwa to Prince Rupert.

30,147. Sept. 27.—Re complaint of Thomas McClyment of Prince Rupert, B. C., that the Grand Trunk Pacific Ry.'s rate of \$2.40 a net ton on coal from Telkwa, B.C., to Prince Rupert, B.C., is excessive and discriminatory compared with the rate charged by the railway from mines located on its Alberta lines. Upon hearing the complaint at Edmonton, Alta., June 21, in the presence of counsel for the railway company, no one appearing for the complainant, and upon reading the written submissions filed, it is ordered that the complaint be dismissed.

Coal and Coke Rates from Minnesota to Western Canada.

30,157. Oct. 1.—Re application of the Minneapolis, St. Paul & Sault Ste. Marie Ry. Co. for permission to issue on one day notice revised rates on coal and coke from Duluth, St. Paul, Minn., etc., to stations in Western Canada. Whereas the Interstate Commerce Commission has issued a special permission, authorizing a revision of the rates on coal and coke from Duluth, St. Paul, etc., to Western Canada, on one day notice, and it being necessary that similar permission should be granted to cover the railway haul within Canada, the Board orders that the Minneapolis, St. Paul & Sault Ste. Marie Ry. Company, or other railway companies operating from Duluth, St. Paul, etc., to stations in Western Canada, be permitted to file revised rates on coal and coke from Duluth, St. Paul, etc., to stations in Western Canada upon one day notice.

Machinery Rates from Chicago and Milwaukee to Ontario.

30,158. Oct. 4.—Re application of Chicago, Milwaukee & St. Paul Ry. for permission to publish, on 15 days notice, revised rates on machinery from Chicago and Milwaukee to stations in Ontario. Whereas the Interstate Commerce Commission has issued a special permission, authorizing a revision of rates on machinery from Chicago and Milwaukee to stations in Ontario, on 15 days notice, and it being necessary that similar permission should be granted to cover the railway haul within Canada, the Board orders that the Chicago, Milwaukee & St.

Paul Ry. be permitted to file revised rates on machinery from Chicago and Milwaukee, to stations in Ontario, upon 15 days notice.

Maine Central Rd. Passenger Tariff.

30,164. Oct. 1.—Re application of Railway Association of Canada, on behalf of the railway companies members thereof and of all other railway companies within the Board's jurisdiction, for authority to make a general advance of 30% in tolls charged for carriage of freight, and the further application for an additional increase of 10% in all freight rates and an increase of 20% in passenger fares, 50% in sleeping and parlor car rates, 40% in milk rates, and 20% on excess baggage rates. Whereas the Maine Central Rd. has filed a supplement to its Standard Passenger Tariff C.R.C. 214, on the basis prescribed by the Board's judgment of Sept. 6, and General order 308, Sept. 9, it is ordered that the Maine Central Rd.'s Supplement 2 to Standard Passenger Tariff C.R.C. 214 be approved; the said supplement, with a reference to this order, to be published in at least two consecutive weekly issues of The Canada Gazette.

Sydney and North Sydney Export and Import Rates.

30,190. Oct. 6.—Re application of Boards of Trade of Sydney and North Sydney, N.S., that the said points be given the benefit of special tariffs on export and import freight, and for passengers holding steamship tickets, as possessed by other Canadian ports engaged in this traffic. Upon hearing the application at Ottawa, Sept. 27, the applicants, the Canadian National, Canadian Pacific and Grand Trunk Railways, and the Canadian Freight Association being represented at the hearing, and what was alleged, and its appearance that the Board has no jurisdiction over the rates on the Intercolonial Ry., the Board orders that the application be dismissed.

At the hearing, the applicants' case was stated by A. N. McLennan, President, and F. C. Kimber, Secretary, Sydney Board of Trade. The Assistant Chief Commissioner, S. J. McLean, gave the following judgment:—"The presentation of the merits in this case has been very ably put forward by Mr. McLennan. We can readily appreciate his desire to obtain this basis of rates. The fundamental question, however, is, the question of our powers. The Canadian National Ry. (using that term as descriptive of the System), is not as yet a term of legal precision. The Canadian National Ry. organization has not yet been fully worked out. We have jurisdiction now, as before, over the Canadian Northern Ry. The one great difficulty that arises in this case is that, in order to carry passengers and freight from Sydney, for a very considerable distance the lines of the Canadian Government Ry. have to be utilized. While at present the organization of the Canadian National System, as I have said, is a descriptive term, not a term of legal precision, it is looking after the management of the Canadian Northern and the Canadian Government Ry. But that fact of itself does not give us jurisdiction.

"There is the further point that, while provision is made in Canadian National legislation, that on the issuance of orders in council railways in which the Government has ownership or interest can be brought under our jurisdiction, no

such order in council has been issued yet in regard to Canadian Government Ry. As our powers must be derived from acts passed by Parliament, we have to say frankly that we have been given no power to control rates over the Canadian Government Ry. or to compel them to initiate rates. Under the present circumstances, having no jurisdiction, notwithstanding the clear statement Mr. McLennan has put forward, the Board has no power to issue the order asked for. I am hopeful that Mr. McLennan's presentation as found in the record will bring about what is desired by him."

Demurrage at Utopia.

30,206. Oct. 11.—Re complaint of White & Co. Ltd., of Hamilton, Ont., against demurrage charged, under rule 5 of Canadian Car Demurrage Rules, on two cars of potatoes delayed in loading at Utopia, Ont. Upon hearing the complaint at Hamilton, Oct. 7, in the presence of representatives of the applicant and the Canadian Car Demurrage Bureau, and what was alleged, it is ordered that the complaint be dismissed.

Release Form for Apple Shipments on Dominion Atlantic Ry.

30,237. Oct. 21.—Re application of Dominion Atlantic Ry., under sec. 348 of the Railway Act, 1919, for approval of release form extending to shippers the privilege of shipping apples in ordinary box cars to the Maritime Provinces and the Province of Quebec, later than Nov. 1, at owner's risk of frost. Upon reading what is filed in support of the application and on behalf of the Nova Scotia Shippers Association, it is ordered that the applicant company's release form extending to shippers the privilege of shipping apples in ordinary box cars to the Maritime Provinces, and the Province of Quebec, later than Nov. 1, at owner's risk of frost, on file with the Board under file no. 16749.1, be approved as follows, viz.—

Dominion Atlantic Railway Company Release.

Memorandum of Agreement made this _____ day of _____, A.D. 19____, between _____ of _____, in the county of _____ of the one part, and the Dominion Atlantic Ry. Co. of the other part. The said _____ hereby agrees to ship car of _____ number _____ as described below, at his own risk of frost, and to assume all risk of freezing said _____ in transit. And further hereby releases the said Dominion Atlantic Ry. Co., or any common carrier on which the said car will be transported, from any and all claims for loss or damage by frost to said _____ while same are in transit and until delivery. Car no. and initials _____ Station from _____ Consigned to _____ Destination _____ Shipper _____ Witness _____

Crude Ore Rate from Sandon, B.C.

30,255. Oct. 23.—Re application of C. Cunningham, of Alamo, B.C., for an order reducing the C.P.R. rate on crude ore from Sandon, B.C., to the Alamo concentrator, from 70c. a net ton to 35c. a net ton; and also directing reparation accordingly from the commencement of shipping in June, 1919. Upon hearing the application at Calgary, Alta., June 15, in the presence of counsel for the railway company, the applicant appearing in person, and what was alleged, and upon reading the written submissions filed, the Board orders that the application be refused.

Demurrage on Tank Cars at Vancouver.

The Board of Railway Commissioners gave the following interim ruling in the case of Procter & Gamble and the Canadian Freight Association, on May 3,

the oil tanks were built on Oct. 1, 1919, and the C.P.R. tank cars were built from a point in the United States eastward to the border of the Dominion of Vancouver, B.C., to be built with a capacity of oil of 1,000 gallons. No restriction, it was alleged, had been made for the tank cars, the oil having been loaded in bulk cars, and the tank cars were released empty, to be built on instructions from the C.P.R., who then applied to the C.P.R. for cancellation of the annual demurrage. Subject to the submission of objections, which have not been made, the Board issued a finding. The Board's investigation indicates that the lack of facilities, alleged to be a lack on the part of the C.P.R., has reference to the absence of facilities at Vancouver for loading

the coal and oil received from the steamship Meigan Maru—a facility which the Railway Act does not require the railway company to furnish; that the tank cars in question were consigned to Vancouver, where they were not required and had not been ordered; that tank car mileage equalization has no bearing on demurrage; that the exception to rule 1 of the Canadian Car Demurrage Rules exempting empty private cars stored on carriers' or private tracks has no application in the circumstances; and that rule 4 (f) of the said rules provides that when empty cars are placed for loading on orders and are not used, demurrage shall be charged from the first 7 a.m. after placement until released without any free time allowance.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John Level Crossing.—A press report states that the Chief Commissioner, Board of Railway Commissioners, was in consultation with the Mayor and others interested, as to the elimination of the level crossing at Douglas Ave., St. John, N.B. The report states that an overhead crossing is favored at a cost estimated at from \$100,000 to \$150,000.

Timiskaming, Que., District.—A press report states that the Quebec Government on Oct. 8 ratified a contract with the C.P.R. for the construction of a railway from Timiskaming, Que., the terminus of the C.P.R. Mattawa branch, to the Quinze River Falls, for which the Quebec Legislature voted a subsidy at its last session.

The Board of Railway Commissioners passed order 30,420, Oct. 22, approving Interprovincial & James Bay Ry. revised route map of general location, from terminus of its line already built, at mile 10, to mile 70, near Riviere des Quinze.

The C.P.R. owns the charter of the Interprovincial and James Bay Ry., under which 10 miles of track were laid from Kipawa, the terminus of a branch line from Timiskaming, northerly, and surveys were made for its construction to Ville Marie and the Quinze River Falls. The project remained in abeyance for some years until last spring. (Oct., pg. 551.)

Westboro Station.—The Board of Railway Commissioners has ordered the building of a station with passenger, freight, express and telegraph accommodation, at or near Victoria Ave., Westboro, Ont., by Dec. 1. Westboro is on the outskirts of Ottawa, and the order is the outcome of an application made by the residents.

Harriston to Listowel.—A press report states that surveys are being made for a line from Harriston, Ont., mile 104 from Toronto, on the Wingham-Teeswater branch, through Palmerston, to Listowel, the terminus of a branch from Linwood on the Toronto-Guelph-Goderich line. Enquiry at the C.P.R.'s Ontario District headquarters has elicited the information that nothing is known there of any such projected line and that the press report referred to above is undoubtedly incorrect.

Windsor Yard.—The Board of Railway Commissioners recently heard objections of the Windsor, Ont., City Council to the plans for the extension of the C.P.R. yards there. The company desires to lay tracks on Caron Ave., to which the city objects.

Algoma District Bridges.—The Board of Railway Commissioners has authorized the rebuilding of bridges at the following points:—bridge 29.27 over Riley's Creek, North Bay Subdivision; bridge 91.48, Carter Subdivision; bridge 19.17, White River Subdivision; bridge 81.5 over Little Pic River, Heron Bay Subdivision.

Winnipeg Subway.—A press report credits the Winnipeg City Engineer with stating that plans for a subway under the C.P.R. tracks at Sherbrooke St., Winnipeg, to connect with Andrews St., are nearly completed. They will provide for a subway 973 ft. long, carrying 58 tracks, and the approaches will add 920 ft. more of construction, the structure to be 68 ft. wide, with 14 ft. 8 in. headway, and to be built of steel and concrete.

Conquest Transfer Track.—The Board of Railway Commissioners on Sept. 23 ordered the C.P.R. to build a transfer track to connect its tracks with the Canadian National Rys. at Conquest, Sask., by Nov. 1.

Leader Southeasterly Branch.—The Board of Railway Commissioners has approved revised location of a portion of this line from Leader, Sask., southeasterly, mile 0 to 25.7.

Swift Current Northwesterly Branch. The Board of Railway Commissioners has approved revised location of a portion of this line from Swift Current, Sask., northwesterly, from mile 28.6 to 34.23, and has authorized the building of the line across certain road allowances. (Oct., pg. 551.)

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, during Sept., 1920, and Sept., 1919:—

	Sept. 1920	Sept. 1919
Canadian National Rys.	5,502	7,100
Canadian Pacific Ry.	11,546	10,878
Grand Trunk Pacific Ry.	1,552	2,829
Great Northern Ry. (Duluth)	101	170
Total:	18,750	20,977

The Franklin Medal has been awarded to Sir Charles Parsons "in recognition of his epoch-making success in the development and the construction of the steam turbine, which has revolutionized the art of steam engineering, particularly in regard to the propulsion of mercantile and naval vessels, and the driving of electrical generators."

Oil Fuel Experiments on British Railways.

The Great Central Ry. and the London & Northwestern Ry. in England have been carrying on a series of experiments with oil and other fuels for locomotives. The tests on the L. & N.W.R., which have been carried out by C. J. Bowen Cooke, Chief Mechanical Engineer, extending over some months past, have yielded very satisfactory results, and it is believed that the employment of oil fuel has now reached a stage when express trains can be hauled without risk of breakdown, by oil fired locomotives.

There has been no attempt to do otherwise than proceed by slow stages, and while more than one new fuel has been the subject of experiment it is said that the Scarab oil burning system, which was developed in Mesopotamia during the war, is that which has up to the present shown the best results with oil fuel. In the locomotive with which trial runs between London and Birmingham were made recently, the oil fuel is carried in a tank, having a capacity of 1,000 gall., which is mounted on the tender, the oil being fed to the burners by gravity. The locomotive, the Watt, is one of the old Precursor type, non-superheated, and has been fired on oil fuel some months past. The train load on a recent test, when the oil fired locomotive worked the 11.30 a.m. from Euston to Birmingham and the 4.50 p.m. return train, was nearly 300 tons, but on both the outward and return trips, with one stop in each case, the journey was accomplished ahead of the scheduled time.

The figures of oil consumption, which have hitherto been withheld by both the Great Central and London and Northwestern Rys., have in the case of the last named company now been issued. They indicate that, as compared with an average consumption of about 70 lb. of coal a mile with the same load on a similar run, the locomotive working on oil fuel with a train load of 294 tons consumed 32 lb. of oil a mile, or 10.88 lb. per 100 ton miles. Nor should the economy realized end with the saving of fuel, as the oil fired locomotive requires far less cleaning than a coal burning one, and the conversion of a large number of locomotives from coal to oil, which could be effected in a very short space of time, should be associated with a considerable saving of labor charges in running sheds and locomotive houses.

Much would, of course, depend on the relative prices of coal and oil fuel, and it is certain that any attempt to convert the whole of the existing coal fired locomotives on British railways to oil burning would be associated with a rise in price of the fuel which might counterbalance the savings in other directions.

Creeping of Railway Rails.—J. A. L. Waddell, consulting engineer, 35 Nassau St., New York, N.Y., writes Canadian Railway and Marine World: "The American Society of Civil Engineers is about to issue a paper of mine, entitled 'The Creeping of Railway Rails,' which consists mainly of a compendium of information received through a questionnaire from over 100 of the highest authorities on the subject in North America. I greatly desire to have this paper discussed thoroughly, so if any railway man wishing to discuss it will write me to that effect, I shall send him an advance copy, provided that his letter reaches me before my supply of copies is exhausted."

Mainly About Railway People Throughout Canada.

R. B. Angus, one of the C.P.R. directors, closed his summer house at Senneville, Que., early in October, and returned to Montreal.

J. R. Ayers, General Master Painter, C.P.R., who has supervision of painting of locomotives and cars, over the whole system, with headquarters at Angus shops, Montreal, has been elected Second Vice President, Equipment Painting Division, Section 3, Mechanical, American Railway Association.

Augustus Brostedt, whose appointment as General Freight Agent, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., was announced in our last issue, was born in Sweden in 1877 and entered railway service in 1898, since when he has been, to 1901, operator, cashier and agent, Great Northern Ry., Moosehead, Minn.; 1901 to 1903, Travelling Passenger Agent, same road, Philadelphia, Pa.; 1903 to 1905, District Passenger Agent, same road, Pittsburg, Pa.; 1905 to 1907, Northern Passenger Agent, same road, Duluth, Minn.; 1907 to 1913, District Freight and Passenger Agent, same road, Winnipeg; 1913 to 1915, District Freight Agent, Canadian Northern Ry. Calgary, Alta.; 1915 to 1917, District Freight and Passenger Agent, same road, Vancouver, B.C.; 1919 to Aug. 31, 1920, Assistant Freight and Passenger Agent, Canadian National Rys., Vancouver, B.C.

Lady Brown, wife of Sir Geo. McLaren Brown, General European Manager, C.P.R., reached Quebec by the s.s. *Empress of Britain*, on Oct. 6, and, after staying a short time in Montreal, went on to Hamilton, Ont., to visit her mother, Mrs. Crerar.

M. Brown, chief clerk, Import Freight Department, G.T.R., Toronto, died there, Oct. 13, after a short illness. He had been in G.T.R. service since 1882.

J. R. Cameron, who arrived at Vancouver, B.C., at the end of September, to take over the duties of Assistant General Manager, Canadian National - Grand Trunk Pacific Rys., was recalled to Winnipeg almost immediately, owing to the serious illness of his mother, who died shortly after his return there, aged 91. She was buried at Truro, N.S.

Senator N. Curry, Chairman of the Board, Canadian Car & Foundry Co., Montreal, and Mrs. Curry and daughter, travelled from Belgium to London, Eng., by aeroplane, on Oct. 10, after visiting his son's grave in the battlefield area.

John Devereux, Locomotive Foreman, Canadian National Rys., Campbellton, N. B., has been superannuated, after 43 years service.

Jas. W. Doyle, formerly General Manager at St. Peters, N.S., of the Cape Breton Ry., which has been taken over by the Dominion Government, and merged into the Canadian National Rys., was presented with an address and a smoking cabinet, recently, by employees who had been under his jurisdiction.

R. L. Fairbairn, who has been appointed Assistant Passenger Traffic Manager, Eastern Lines, Canadian National Rys., Toronto, was born at Stillwater, Minn., Nov. 24, 1880, his parentage being Canadian. He entered railway service in July, 1899, since when he has been, to Mar. 1904 in office of Auditor of Passenger Receipts, G.N.R.; Mar. 1904 to May 1, 1906, in Passenger Traffic Manager's of-

fice, same road; May 1 to Dec. 1, 1906, assistant rate clerk, Passenger Department, same road; Dec. 1, 1906 to June 1, 1908, chief rate clerk, Passenger Department, same road; June 15, 1908 to Oct. 1910, chief clerk, Passenger Department, Canadian Northern Ry., Winnipeg; Oct. 1910 to Apr. 1911, District Passenger Agent, C.N.R., Saskatoon, Sask.; Apr. 1911 to May 1912, Assistant General Passenger Agent, lines east of Port Arthur, C.N.R., Toronto; May 1912 to Oct. 4, 1920, General Passenger Agent, Eastern Lines, Canadian Northern Ry., and latterly Canadian National Rys., Toronto.

W. J. Fee, Travelling Engineer, G.T.R., was elected Fourth Vice President, Travelling Engineers Association, at the annual convention in Chicago recently.

Sir Ailwyn Fellowes, K.C.V.O., Deputy Chairman, Great Eastern Ry., returned to England, by the s.s. *Megantic*, Oct. 16, after a trip through Canada.

A. Brostedt,
General Freight Agent, Canadian National-Grand
Trunk Pacific Rys., Vancouver, B.C.

Blake P. Fraser, Division Passenger Agent, Pennsylvania System, Buffalo, N. Y., died suddenly there, Oct. 24.

J. M. Gibbon, General Publicity Agent, C.P.R., Montreal, has written another novel, "The Conquering Hero." Opening in a hunting party's camp in the Maritime Provinces, the scenes shift to a ranch near the Rocky Mountains, without breaking the continuity or interest of the tale.

T. H. Ginnelly, of the Freight Claims Department, C.N.R., Winnipeg, was presented with a case of pipes and a gold penknife, with a gold wrist watch and cut glass bowl for Mrs. Ginnelly, recently, by a number of his friends, on leaving Winnipeg, for Vancouver, B.C., where he has been appointed Assistant Freight Claims Agent, Canadian National-Grand Trunk Pacific Rys.

Sacheveril M. Greene, whose appointment as City Ticket Agent, Canadian

National-Grand Trunk Pacific Rys., Regina, Sask., was announced in our last issue, was born at Derby, Eng., Feb. 15, 1887, and entered railway service Aug. 28, 1908, since when he has been, to May 30, 1910, clerk, Freight Department, Grand Trunk Pacific Ry., Saskatoon, Sask.; June 1 to July 18, 1910, cashier, Freight Department, C.P.R., Saskatoon, Sask.; July 19, 1910, to Feb. 28, 1916, Assistant City Passenger and Ticket Agent, G.T.P.R., Saskatoon, Sask.; Mar. 1, 1916, to Aug. 31, 1920, City Passenger and Ticket Agent, G.T.P.R., Regina, Sask.

George Nelson Goad, whose appointment as Superintendent, Nipissing Division, Ontario District, Canadian National Rys., Capreol, Ont., was announced in our last issue, was born at Toronto, Nov. 26, 1884, and entered railway service in Sept. 1901, since when he has been, to July 1902, junior clerk, G.T.R., Toronto; July 1902 to Sept. 1904, junior clerk and stenographer, Division, Freight Agent's office, G.T.R., Toronto; Sept. 1904 to Dec. 1905, chief clerk Division Freight Agent's office, Lehigh Valley Rd., Toronto; Dec. 1905 to Feb. 28, 1907, stenographer to Third Vice President, Canadian Northern Ry., Toronto; Mar. 1, 1907, to Aug. 31, 1915, chief clerk to Superintendent, and to General Superintendent, successively, same road, Toronto; Sept. 1 to Dec. 31, 1915, chief clerk, General Manager's office, same road, Toronto; Jan. 1 to Dec. 20, 1916, Inspector of Transportation, Eastern Lines, same road, Toronto; Dec. 21, 1916 to Nov. 30, 1917, Trainmaster, Toronto Terminals and Muskoka Subdivision, same road, Toronto; Dec. 1, 1917, to Dec. 22, 1918, Assistant Superintendent, Toronto Division, same road, Toronto; Dec. 23, 1918, to Aug. 31, 1920, Superintendent, Superior Division, Ontario District, Canadian National Rys., Hornepayne, Ont.

Casimir Stanislaus Gzowski, who has been appointed Assistant to Vice President of Construction, Canadian National Rys.-Grand Trunk Pacific Ry., Toronto, was born at Toronto, May 1, 1876, and entered transportation service in April, 1897. While attending Toronto University he was engaged during the summers on survey work, in 1897 being with the C.P.R. on survey and construction on its Crownst Branch and subsequently in various positions in charge of location and construction work for the C.P.R. and other roads. In 1905 he became a partner in Macdonell, Gzowski & Co., Vancouver, B.C., and later with a branch in Spokane, Wash., under the name of G. O. Foss & Co., as contractors and engineers, building the C.P.R. Nicola Branch, changes of line on C.P.R. at Rogers Pass, near Nelson, B.C., and on the Esquimalt & Nanaimo Ry., Vancouver Island. The firm also built parts of the Milwaukee extension westerly, Grand Northern Ry. changes of lines and parts of branches in Canada and the U.S.; C.P.R. spiral tunnels at Field, B.C., and considerable other railway work in Canada and the U.S., until its dissolution in 1914, after which he did valuation work for the Dominion commission of enquiry into railways and also acted as special engineer for the Canadian Northern Ry. on the ation. From June, 1919, to Sept. 1920, government arbitration of its stock value was Special Engineer to Vice President, Operation, Maintenance and Construction, Canadian National Rys., Toronto.

Grant Hall, Vice President, C.P.R., returned to Montreal, Que., after a month's trip to the Atlantic coast, where he was in charge of the C.P.R. train.

Sir Arthur Harris, Special Traffic Representative, C.P.R., and Lady Harris, returned to Montreal, Que., on Oct. 11, after a month's trip to the Atlantic coast, where they were in charge of the C.P.R. train.

George Alexander Hoag, who was appointed as chief clerk to the General Freight Agent, St. John's, Nfld., was appointed General Passenger Agent for that company, Aug. 21, 1906, and for a short time, at the end of 1917, was also Assistant to the President (Sir William D. Reid), and subsequent to the change of President, he acted as Sir William D. Reid's private Secretary.

E. McDonald, whose appointment as Assistant General Baggage Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, was announced in our last issue, was, from June, 1906, to May, 1910, clerk, G.T.R., Toronto; May, 1910, to Sept., 1920, General Baggage Agent, Grand Trunk Pacific Ry., Winnipeg.

G. E. McGlade, City Ticket Agent, C.P.R., Brockville, Ont., was struck by an automobile there, on Oct. 11, sustaining a sprained ankle and severe bruises, necessitating his removal to a hospital.

A. J. Mitchell, Vice President, Freight and Accounts, Canadian National Rys., who left Toronto Sept. 28 for England, is expected to sail from there on Nov. 1.

William Albert Kirkpatrick, whose appointment as Superintendent of Transportation, Prairie District, Canadian National Rys., Saskatoon, Sask., was announced in our last issue, was born at West Lorne, Ont., Aug. 28, 1883, and entered railway service in July 1898, since when he has been, to Sept. 1902, operator and agent, Michigan Central Rd., at various points; Sept. 1902 to Dec. 1904, dispatcher, Pere Marquette Rd., St. Thomas, Ont.; Apr. to Aug. 17, 1905, operator and ticket agent, C.P.R.; Aug. 17, 1905, to Dec. 1, 1906, operator and dispatcher, Canadian Northern Ry.; Dec. 1, 1906, to Dec. 1, 1910, chief clerk to Superintendent, and General Superintendent, same road; Dec. 1, 1910, to Sept. 1, 1913, Inspector of Transportation, same road; Sept. 1, 1913, to Sept. 1, 1920, Trainmaster and Assistant Superintendent, same road, latterly, Canadian National Rys., Neepawa, Man.

F. L. Hutchinson, Manager in Chief, C.P.R. hotel, Montreal, is reported to have decided to retire from that company's service at the end of the year, and to have bought a farm of 260 acres near Chemainus, B.C.

William Albert Kirkpatrick, whose appointment as Superintendent of Transportation, Prairie District, Canadian National Rys., Saskatoon, Sask., was announced in our last issue, was born at West Lorne, Ont., Aug. 28, 1883, and entered railway service in July 1898, since when he has been, to Sept. 1902, operator and agent, Michigan Central Rd., at various points; Sept. 1902 to Dec. 1904, dispatcher, Pere Marquette Rd., St. Thomas, Ont.; Apr. to Aug. 17, 1905, operator and ticket agent, C.P.R.; Aug. 17, 1905, to Dec. 1, 1906, operator and dispatcher, Canadian Northern Ry.; Dec. 1, 1906, to Dec. 1, 1910, chief clerk to Superintendent, and General Superintendent, same road; Dec. 1, 1910, to Sept. 1, 1913, Inspector of Transportation, same road; Sept. 1, 1913, to Sept. 1, 1920, Trainmaster and Assistant Superintendent, same road, latterly, Canadian National Rys., Neepawa, Man.

J. W. N. Johnston, who has been appointed General Agent for the Dominion of Newfoundland, Canadian National Rys., and Canadian Government Merchant Marine Ltd., St. John's, Nfld., was born at Campbellville, N.B., Oct. 4, 1878, and entered transportation service in the General Freight Department, C.P.R., St. John, N.B., serving in various capacities in that department from junior clerk to assistant to chief clerk, until Feb. 1902, when he entered Reid Newfoundland Co.'s

service as chief clerk to the General Freight Agent, St. John's, Nfld. He was appointed General Passenger Agent for that company, Aug. 21, 1906, and for a short time, at the end of 1917, was also Assistant to the President (Sir William D. Reid), and subsequent to the change of President, he acted as Sir William D. Reid's private Secretary.

E. McDonald, whose appointment as Assistant General Baggage Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, was announced in our last issue, was, from June, 1906, to May, 1910, clerk, G.T.R., Toronto; May, 1910, to Sept., 1920, General Baggage Agent, Grand Trunk Pacific Ry., Winnipeg.

G. E. McGlade, City Ticket Agent, C.P.R., Brockville, Ont., was struck by an automobile there, on Oct. 11, sustaining a sprained ankle and severe bruises, necessitating his removal to a hospital.

A. J. Mitchell, Vice President, Freight and Accounts, Canadian National Rys., who left Toronto Sept. 28 for England, is expected to sail from there on Nov. 1.

L. F. Muncey,
Superintendent, Canadian National Railway,
Kamloops, B.C.

by the s.s. Adriatic on his return journey.

L. F. Muncey, whose appointment as Superintendent, Canadian National Rys., Kamloops, B.C., was announced in our last issue, was born at Kensington, P.E.I., Mar. 15, 1876, and entered railway service in Aug. 1891, since when he has been, to Oct. 1893, operator, New Brunswick & Prince Edward Island Ry., Cape Tormentine, N.B.; Aug. 1896 to Aug. 1897, relieving agent, Prince Edward Island Ry.; Aug. 1897 to June 1901, audit clerk, P.E.I.R., Charlottetown, P.E.I.; June 1901 to Aug. 1902, agent and operator, Canadian Northern Ry., at various points; Aug. 1902 to May 1908, Traveling Auditor, same road, Winnipeg; May 1908 to Apr. 1909, Chief Travelling Auditor, same road, Winnipeg; Apr. 1909 to Dec. 1914, agent, same road, Beaudette, Minn.; Dec. 1914 to May 1919, General Chairman of Order of Railroad Telegraphers, Winnipeg; May 1919 to Aug. 1920,

Assistant Superintendent, Canadian National Rys., Vancouver, B.C.

F. I. Norman, whose appointment as Commercial Agent, Canadian National-Grand Trunk Pacific Rys., Seattle, Wash., was announced in our last issue, was born at Kansas City, Mo., Jan. 30, 1879, and entered railway service Feb. 1, 1906, since when he has been, to Feb. 1, 1907, Soliciting Freight Agent, Rutland Rd., Michigan Central Rd., and Ontario Central Despatch Lines, Kansas City, Mo.; Mar. 1, 1907, to June 1, 1910, Soliciting Freight Agent, G.T.R., Kansas City, Mo.; June 1, 1910, to June 30, 1918, Commercial Agent, G.T.R., Seattle, Wash.; July 1, 1918, to Sept. 8, 1920, Commercial Agent, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Seattle, Wash.

John Henry Fakenham, whose appointment as Assistant Superintendent of Terminals, Canadian National Rys., Quebec, Que., was announced in our last issue, was born at St. Raymond, Que., Nov. 24, 1886, and entered railway service in July 1903, since when he has been, to May 1904, assistant agent, Quebec & Lake St. John Ry., St. Raymond, Que.; May 1904 to Oct. 1905, operator and agent, same road, at various points; Oct. 1905 to June 1907, operator, C.P.R., at various points; June 1907 to Aug. 1909, dispatcher, C.P.R., Kenora, Ont.; Nov. 1909 to Mar. 1910, operator, C.P.R., at various points; May 1910 to Aug. 1913, train baggageman, Canadian Northern Ry., Quebec, Que.; Aug. 1913 to Nov. 1918, Yardmaster, C.N.R., Quebec, Que.; Nov. 1918 to Sept. 1920, dispatcher, Canadian National Rys., Montreal.

Thomas Edmund Peter Pringle, whose appointment as City Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, was announced in our last issue, was born at Huntingdon, Que., May 1, 1887, and entered railway service July 23, 1906, since when he has been, to Aug. 16, 1907, clerk, Passenger Traffic Manager's office, C.P.R., Montreal; Aug. 17, 1907, to May 15, 1909, ticket clerk, C.P.R., Calgary, Alta.; May 16, 1909, to Sept. 15, 1911, ticket clerk, City ticket office, C.P.R., Winnipeg; Sept. 16, 1911, to Aug. 11, 1920, City Passenger and Ticket Agent, Grand Trunk Pacific Ry., Winnipeg.

Miss Elsie Robider, daughter of W. J. Robider, General Master Car Builder, C.P.R., was married at Montreal Oct. 2, to Dr. M. J. Egan, of Savannah, Georgia.

William A. B. Russell, whose appointment as Division Freight Agent, Canadian National-Grand Trunk Pacific Rys., Calgary, Alta., was announced in our last issue, was born at Rednersville, Ont., Jan. 1, 1886, and entered railway service Mar. 20, 1904, since when he has been, to Apr. 30, 1904, clerk, Local Freight Department, Central Vermont Ry., St. Albans, Vt.; May 1 to Nov. 17, 1904, stenographer, General Freight Agent's office, same road, St. Albans, Vt.; Nov. 17, 1904, to Aug. 14, 1905, stenographer to General Freight Agent, same road, St. Albans, Vt.; Aug. 15, 1905, to Apr. 30, 1908, stenographer to General Freight Agent, G.T.R., Montreal; May 1 to Dec. 31, 1908, stenographer to Assistant Freight Traffic Manager, Winnipeg; Jan. 1, 1909, to Dec. 31, 1910, clerk, Freight Traffic Department, same road, Winnipeg; Jan. 1, 1911, to Dec. 31, 1915, chief clerk, Freight Traffic Department, same road, Winnipeg; Jan. 1 to Sept. 30, 1916, chief clerk to Traffic Manager, G.T.P.R., and Western Traffic Manager, Canadian Government Rys., Winnipeg; Oct. 1, 1916,

to Sept. 4, 1920, Commercial Agent, G. T.P.R., Regina, Sask.

Frank L. Sample, who has been appointed Assistant Superintendent of Terminals, G.T.R., Detroit, Mich., was born at Altona, N.Y., June 23, 1873, and entered railway service in Oct. 1891, since when he has been, to Sept. 1892, telegraph operator, Central Vermont Ry., Essex Jct., Vt.; Sept. 1892 to Aug. 1899, dispatcher, same road, New London, Conn.; Aug. 1899 to May 1901, ticket agent and spare dispatcher, New York, New Haven & Hartford Rd., Norwich, Conn.; May 1901 to Apr. 1902, dispatcher, Rutland Rd., Rutland, Vt.; Apr. 1902 to Sept. 1920, dispatcher, Boston & Albany Rd., Springfield, Mass., and Trainmaster, same road, Pittsfield, Mass.

John Richardson Scott, whose appointment as Assistant General Freight Agent, British Columbia Lines, Canadian National-Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., was announced in our last issue, was born at Lochmaben, Scotland, Jan. 3, 1882, and entered railway service in 1896, since when he has been, to 1898, junior clerk, Freight Department, Caledonian Ry., Lanark, Scotland; 1898 to 1899, clerk, Passenger Department, same road, Kelvinbridge, Glasgow, Scotland; 1899 to 1900, assistant parcels clerk, same road, Bridge St. station, Glasgow, Scotland; 1900 to 1902, clerk, Passenger Department, same road, Wishaw Central, Scotland; Aug. 1902 to Mar. 1908, clerk and chief clerk, Import Freight Department, C.P.R., Montreal; Apr. 1908 to Nov. 1915, clerk and chief clerk, Freight Traffic Department, Canadian Northern Ry., Winnipeg; Dec. 1915 to Sept. 10, 1920, Division Freight Agent, Canadian Northern Ry., and Canadian National Rys., Port Arthur, Ont.

Mrs. Alfred Shaughnessy, widow of Capt. the Hon. Alfred Shaughnessy, Lord Shaughnessy's son, who was killed in the war, is announced as being engaged in England to Capt. the Hon. P. W. Legh, son of Lord Newton.

Lord Shaughnessy, Chairman, C.P.R. Co., Hon. Marguerite Shaughnessy, and Hon. W. J. and Mrs. Shaughnessy, attended the race at Windsor, Ont., Oct. 11, between Man o' War and Sir Barton, the latter horse being owned by J. K. L. Ross, one of the C.P.R. directors.

Frederick Anderson Shaw, who has been appointed General Agent, Freight Department, Canadian National-Grand Trunk Rys., Cleveland, Ohio, was born at Smiths Falls, Ont., Sept. 29, 1872, and entered railway service in 1897, since when he has been, to Feb. 1898, billing clerk, C.P.R., Winnipeg; Feb. to June 1908, clerk, Local Freight Department, C.P.R., Brandon, Man.; June 1898 to Oct. 1899, with Foley Bros. and Larson, St. Paul, Minn.; Oct. 1899 to 1902, in commercial business, Montreal; 1902 to 1903, chief clerk, Commercial Agent's office, Canadian Northern Ry., Montreal; 1903 to 1904, Travelling Freight Agent, C.N.R., Toronto; 1904 to 1906, Soliciting Freight Agent, C.N.R., Montreal; 1906 to 1912, City Freight Agent, C.N.R., Montreal; 1912 to Jan. 1, 1914, District Freight Agent, lines east of Montreal, C.N.R., Montreal; Jan. 1, 1914, to Apr. 9, 1917, Division Freight Agent, lines east of Port Arthur and west of Ottawa, C.N.R., Toronto; Apr. 9, 1917, to Sept. 10, 1920, General Agent, Freight and Passenger Departments, Canadian National Rys., Detroit, Mich.

George Stephen, whose appointment as Freight Traffic Manager, Canadian Na-

tional and Grand Trunk Pacific Rys., and Grand Trunk Pacific Coast Steamship Co., Toronto, was announced in a recent issue, was born at Montreal, July 5, 1876, and entered railway service in 1889, since when he has been, to 1899, clerk, C.P.R.; 1899 to 1900, chief clerk to Assistant General Freight Agent, C.P.R., Winnipeg; 1900 to 1901, Travelling Freight Agent, Manitoba Lines, C.P.R.; 1901 to 1903, Contracting Freight Agent, C.P.R., Nelson, B.C.; 1903 to Jan. 1907, chief clerk to General Traffic Manager, Canadian Northern Ry., Winnipeg; Jan. 1907 to May 1909, Assistant General Freight Agent, C.N.R., Winnipeg; May 1909 to Dec. 31, 1915, General Freight Agent, C.N.R., Winnipeg; Jan. 1 to Nov. 6, 1916, Assistant Freight Traffic Manager, Western Lines, C.N.R., Winnipeg; Nov. 1916 to Dec. 1918, Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg; Dec. 1918 to Aug. 24, 1920, Freight Traffic Manager, Canadian National Rys., Toronto.

A. F. Stewart, heretofore Chief Engineer, Canadian National Rys. at Toronto, was entertained at dinner at the Albany Club there, and presented with a handsome clock, on Oct. 15, by a number of C.N.R. officials and other personal friends, on the eve of his leaving for Moncton, N.B., to become Chief Engineer, C.N.R., there.

Brigadier General J. W. Stewart, railway contractor, and his daughter, Miss Margaret Stewart, returned to Vancouver, early in October, from England.

Lt. Col. Claude C. Stibbard, D.S.O., who was appointed Trainmaster, C.P.R., at Lethbridge, Alta., on Aug. 1, was born in Essex, Eng., Oct. 19, 1885. He first entered transportation service Jan. 17, 1906, and was from 1910 to 1915 locomotiveman, C.P.R., at Winnipeg. After serving with the Canadian overseas forces for a year, he was selected by the War Office to be seconded to the Imperial forces, and to be attached to Sir Eric Geddes' organization department, when the latter took over the re-organization of railways on the western front. He remained in this position throughout the whole of Sir Eric Geddes' term of service as Director General of Transportation, and also throughout the terms of service of Major General Sir Phillip A. M. Nash, and Major General Sir S. D. A. Crookshank, successors in turn to Sir Eric Geddes, as Directors General of Transportation. In Nov. 1918, he was ordered to North Russia, to assist in the re-organization of the railways in that region, and was appointed Director of Railways. One of the many problems was the solving of the financial difficulties, and that this and all other problems were handled successfully is evidence by a letter of appreciation which he received from the General Officer Commanding the North Russian forces. Following the evacuation of the North Russian forces, he was appointed to the Railway Advisory Staff for South Russia, as Officer Commanding Railways in Ekaterinodar, and also for the whole of the Crimea. He made a tour of inspection through Turkey, Bulgaria, Roumania, Jugo-Slavia, Italy and Switzerland, to compare the various systems of railway management and organization. For his work on railways during the war, he was awarded the D.S.O. and the order of St. Stanislaus, was twice mentioned in dispatches and was the subject of special orders of the day from Lord Rawlinson, and from the Russian General Officer Commanding in the Crimea. He was on the steamship Carpathia when she was torpedoed, and

lost all the effects he was travelling with.

Marshall D. Thompson, whose appointment as Superintendent, Canadian National-Grand Trunk Pacific Rys., Regina, Sask., was announced in our last issue, was born at Parkhill, Ont., Aug. 9, 1885, and entered railway service Aug. 16, 1901, since when he has been, to Mar. 1904, operator, G.T.R., Stratford, Ont.; Mar. 1904 to Aug. 1906, dispatcher, G.T.R., Stratford, Ont.; Aug. 1906 to Oct. 1908, dispatcher, G.T.R., Allandale, Ont.; Oct. 1908 to July 1909, dispatcher, Grand Trunk Pacific Ry., Melville, Sask.; July 1909 to June 1910, Chief Dispatcher, G.T.P.R., Wainwright, Alta.; June 1910 to Nov. 1917, Chief Dispatcher, G.T.P.R., Melville, Sask.; Nov. 1917 to Sept. 1920, Assistant Superintendent, G.T.P.R., Regina, Sask.

Ephraim Tiffin, Special Representative, Canadian National Rys., Toronto, after a lengthy illness, died Oct. 2, at Preston, Ont., where he and his wife had lived for several years with their daughter, Mrs. E. O. Schlueter. He was born at Hamilton, Ont., May 5, 1849, and entered railway service in 1863, since when he had been to 1865, messenger, Chief Engineer's office, Great Western Ry. of Canada; 1865 to 1867, clerk in General Manager's office, same road; 1867 to 1869, ticket clerk, same road, London and Toronto, consecutively; 1869 to 1871, clerk in Superintendent's office, same road; 1871 to 1877, station master, same road, Brantford, Ont.; 1877 to 1881, Travelling Freight Agent, same road; 1881 to 1888, General Freight Agent, Credit Valley Ry., Toronto; and he remained in that position during several reorganizations, viz., Credit Valley and Toronto Grey & Bruce Rys.; Ontario & Quebec Ry.; and Ontario Division, C.P.R.; 1888 to 1890, General Southwestern Agent, Commercial Express Fast Freight Line, St. Louis, Mo.; 1890 to Feb. 1896, General Freight Agent, Atlantic Division, C.P.R., St. John, N.B.; Feb. 1896 to Jan. 1901, General Freight Agent, Ontario Division, C.P.R., Toronto; Jan. 1901 to Apr. 1909, Traffic Manager, Intercolonial Ry., Moncton, N.B.; Apr. 1909 to July 1913, member of Canadian Government Railways Managing Board, and General Traffic Manager, Canadian Government Rys., Moncton, N.B.; July 1913 to May 1919, General Western Agent, Canadian Government Rys., Toronto; May 1919, to the date of his death, Special Representative, Canadian National Rys., Toronto. He was buried at Hamilton, Ont., the Canadian National Rys. providing a special car for the journey from Preston there.

Arthur A. Tisdale, who has been appointed Assistant to General Manager, Western Lines, Canadian National Rys., and G.T.P. Ry., Winnipeg, was born at Mount Vernon, Ont., Mar. 8, 1874, and entered railway service Sept. 18, 1889, since when he has been, to July 1892, in local freight office, G.T.R., Hamilton, Ont.; July 1892 to May 1899, secretary to Chief Engineer, Hamilton and Montreal; May 1899 to Oct. 1907, successively, secretary, chief clerk, and Assistant to Fourth Vice President in charge of Transportation and Maintenance of Way, G.T.R., Montreal; Oct. 1907 to Oct. 1909, Assistant to Vice President and General Manager, Grand Trunk Pacific Ry., Montreal; Oct. 1909 to June 1916, Superintendent, Lake Superior Division, same road, Fort William, Ont.; June 1916 to Jan. 1, 1916, Superintendent, Regina Division, same road, Regina, Sask.; Jan. 1, 1916, to Aug. 1920, Assistant to Vice President and General Manager, same road, Winnipeg.

Joseph Alfred Trudel, whose appointment as Assistant Superintendent, Laval Branch, Quebec District, Canadian National Ry., Laval, Que., was announced in our last issue, was born at Nioabek, Que., Dec. 1, 1882, and entered railway service Mar. 15, 1907, since when he has been: St. Mary, 1907, porter, Canadian Northern Ry., St. Henri Jet, Que.; Apr. 1 to Apr. 26, 1907, freight clerk, same road, Chatham, Ont.; Apr. 26, 1907, to Sept. 1, 1911, freight clerk, same road, Riverview, Ont.; May 28, 1912, to Sept. 1, 1913, freight agent, same road; Sept. 1 to Oct. 10, 1913, freight clerk, same road, Riviere-du-Loup, Que.; Oct. 15, to Nov. 10, 1913, freight agent, same road, Riviere-du-Loup, Que.; Nov. 10, 1913, to Dec. 1, 1913, freight agent, same road, Quebec, Que.; Dec. 1, 1915, to Feb. 1, 1918, Terminal Agent, same road, Quebec, Que.; Feb. 1, 1918, to Sept. 13, 1920, Assistant Superintendent of Terminals, Canadian National Ry., Quebec, Que.

Mrs. C. E. E. Usher, wife of the Passenger Traffic Manager, C.P.R., and the Misses Usher returned to Montreal early in October, after spending some time in the Rocky Mountains and at the Pacific Coast.

R. C. Vaughan, Assistant to President, Canadian National Ry., and Canadian Government Merchant Marine, has bought the house, 57 Douglas Drive, Toronto, which was occupied until recently by Sir Clifford Sifton as tenant, and will remove there with his family.

N. B. Walton, whose appointment as Assistant General Superintendent, Grand Trunk Pacific Ry., Prince Rupert, B.C., was announced in our last issue, was born at Palmerston, Ont., July 27, 1884, and entered railway service Aug. 20, 1900, since when he has been, to Jan. 1907, in various positions as clerk, operator and secretary to Vice President, G.T.R.; Jan. to Apr. 1907, Trainmaster, same road; Apr. to Dec. 1907, in Great Northern Ry. service at St. Paul, Minn.; Jan. to Oct. 1908, Claims Agent, G.T.D.; Oct. 1908 to Aug. 1910, secretary to General Superintendent, Grand Trunk Pacific Ry.; Aug. 1910 to July 1911, Trainmaster and Assistant to General Superintendent, same road, Winnipeg; July 1911 to Aug. 31, 1920, Superintendent, Edmonton Division, same road, Edmonton, Alta.

F. L. Wanklyn, General Executive Assistant, C.P.R., closed his summer house at Senneville, Que., early in October, and returned to Montreal, with Mrs. Wanklyn and family, for the winter.

Fred Yates, who has been appointed City Passenger Agent, Canadian National-Grand Trunk Pacific Ry., Seattle, Wash., was born in England, July 4, 1891, and entered railway service in Oct. 1907, since when he has been, to May 1911, clerk and stenographer, C.P.R., Winnipeg; Aug. 9, 1911, to Oct. 1912, clerk and stenographer, Grand Trunk Pacific Ry., Winnipeg; Oct. 1912 to Dec. 1914, secretary to General Passenger Agent, same road, Winnipeg; Dec. 1914 to Aug. 1916, rate clerk, Passenger Department, same road, Winnipeg; Aug. 1916 to Feb. 1920, chief rate clerk, same road, Winnipeg; Feb. 16 to Aug. 15, 1920, chief clerk, Canadian National Ry., Seattle, Wash.

Timiskaming & Northern Ontario Ry. Restaurant Privileges.—Tenders have been accepted for restaurant privileges as follows:—Englehart station, D. W. Porter, 602 Shaw St., Toronto; Temagami station, F. W. Wilson, Timagami, Ont.

Prepayment of Certain Freight Charges from the U.S. to Canada Suspended.

A Washington, D.C., press dispatch, Oct. 5, stated that the Interstate Commerce Commission had suspended until Feb. 2, 1921, proposed rules and regulations in the south, requiring the prepayment of freight charges on cotton and cotton linters, from points in the United States to points in Canada. The order referred to is as follows:—

"It appearing that there has been filed with the Commission by F. A. Leland, agent, a tariff containing schedules stating new individual and joint regulations and practices affecting rates and charges, to become effective on Oct. 5, designated as follows: 'F. A. Leland, Agent; supplement 11 to I.C.C. 1334,' it is ordered that the Commission, upon complaint, without formal pleading, enter upon a hearing concerning the lawfulness of the regulations and practices stated in the said schedules contained in item 10, on page 6 of said tariff. It further appearing that said schedules make certain increases in rates for the interstate transportation of cotton and cotton linters, and the rights and interests of the public appearing to be injuriously affected thereby, and it being the opinion of the Commission that the effective date of the said schedules contained in said tariff should be postponed pending said hearing and decision thereon, it is further ordered that the operation of the said schedules contained in said tariff be suspended, and that the use of the regulations and practices therein stated be deferred upon interstate tariff until Feb. 2, 1921, unless otherwise ordered by the Commission, and no change shall be made in such regulations and practices during the said period of suspension unless authorized by special permission of the Commission. It is further ordered that the rates and charges thereby sought to be changed shall not be increased and the regulations and practices thereby sought to be altered shall not be changed by any subsequent tariff or schedule, until this investigation and suspension proceeding has been disposed of or until the period of suspension and any extension thereof has expired, unless authorized by special permission of the Commission. And it is further ordered that a copy of this order be filed with said schedules in the Commission's office, and that copies hereof be forthwith served upon the carriers parties to said schedules and upon F. A. Leland, and that said carriers parties to said schedules be made respondents to this proceeding, and that they be notified of the time and place of the hearing above ordered."

In this connection we give the following addition to the Commission's Conference Ruling 207, adopted May 18, as follows:—"The existing difference in exchange value between the monies of the United States and the Dominion of Canada, while continuing to bear the same denomination, has been productive of confusion and uncertainty as to the construction to be placed upon tariff schedules, division sheets, and accounts in respect of traffic crossing the international boundary. We are of opinion that where transportation of persons or property, or transmission of intelligence by wire or wireless, takes place partly within the U.S. and partly within Canada, the tariff charges or divisions thereof accruing for the part which takes place within the U.S. are paying only in lawful money of

the U.S., irrespective of the money in which tariff charges or divisions thereof accruing for the part which takes place in Canada may be payable under the laws there in force. Adjustments should be made in accordance herewith, by carriers subject to the act, in settling their accounts with connecting carriers. Appropriate rules or regulations to give effect to this ruling may also be included by such carriers in their tariff schedules, if they so desire. The practice, which has grown up since development of said difference in exchange value, of requiring prepayment of charges in cases where not customarily required theretofore, tends to embarrass shippers and impede foreign commerce. Carriers subject to the act will be expected to refrain from such unusual requirements in cases where they are not justified by other considerations."

In transmitting the foregoing information on Oct. 12, the Interstate Commerce Commission's Secretary wrote Canadian Railway and Marine World as follows:—"The general question of prepayment on Canadian traffic is receiving the Commission's attention, and it is not improbable that some announcement will be made on the subject at a not distant date."

A Railway Official's Novel.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, author of "Drums Afar" and "Hearts and Faces," has written another novel, "The Conquering Hero," which is published by S. B. Gundy, Toronto. The opening scene is rather curious and quite original. Into the midst of a fishing party of city men steps a glorious vision, who introduces herself as Princess Stephanie Sobieska. It transpires that she is a "movie" star and has her business manager and press agent in attendance. The two parties join forces and young Donald MacDonald, farmer, guide, and sergeant in the late war, becomes her prime favorite. After they part Donald is horrified to find his D.C.M. medal is missing. Who was this woman? Princess? Actress? Thief? Back on his British Columbia farm, Donald hears from her again, and, through her, regains his lost medal, but, also through her, for a time loses his little Scotch sweetheart who had promised to make the lonely farm homelike for him. But the Princess turns out to be a good friend and brings them together again.

There is much excellent description of the beautiful Rocky Mountain scenery, the horrors of a forest fire, ranching in Canada and the difficulties of the denizens of the old world to adjust themselves to the new world conditions, all of which is depicted with the steady pen of one who knows his subject and is not drawing solely upon his imagination.

Freight Car Robberies.—Five C.P.R. employees at Montreal were committed for trial, Oct. 1, on charges of stealing some \$45,000 worth of cigarettes, liquor, cloth and a large variety of other goods from freight cars. John Doyle, one of the accused, pleaded guilty and gave evidence as to the thefts and the manner of disposing of the stolen goods. Charges of receiving stolen goods are pending against other men.

Standard Specification for Steel Railway Bridges.

The Canadian Engineering Standards Association, which has its office in Ottawa, has issued its Standard Specification for Steel Railway Bridges, in booklet form, 6 x 9 in., 79 pages, including index. The preface is as follows:—

"This specification is issued with a view of giving to the bridge designer, detailer, and manufacturer, guidance along definite lines, thus leading to uniformity in the provisions to be made for strength and utility. The various clauses have been framed without any intention of limiting the engineer's choice as to type of bridge, and it is believed that no unnecessary restriction has been placed on the designer as regards details of construction.

"The specification is based on that for steel railway bridges originally issued by the Canadian Society of Civil Engineers in 1912, the work on which was naturally continued by the Engineering Institute of Canada when it succeeded the Canadian Society of Civil Engineers. The present specification is thus largely due to the activity of the Committee of the Engineering Institute of Canada's committee working under the chairmanship of P. B. Motley (Engineer of Bridges, C. P.R.). A revised draft specification was prepared and approved by that committee on Oct. 17, 1918. It was submitted to the Engineering Institute of Canada's council, referred by the council to the annual general meeting for 1919, and early in 1919 was transmitted to the membership of the Institute for comment and criticism.

"On the formation of the Canadian Engineering Standards Association in 1919, the council of the Institute felt that the completion and final approval of the specification would be facilitated if it were placed in the hands of the Association; and the council approved of an arrangement which handed the E. I. C. Specification over to the Association for action. The main committee of the Association at its meeting on June 4, 1919, accordingly appointed a sectional committee on steel bridges and construction, under the chairmanship of G. H. Duggan, and a sub-committee on steel railway bridges under the chairmanship of P. B. Motley. As the membership of the C.E.S.A. sub-committee is identical with that of the E.I.C. committee which prepared the draft specification, the E.I.C. committee practically became the sub-committee of the Canadian Engineering Standards Association.

"In accordance with the regular system of the Association, the sub-committee's specification was submitted to the sectional committee for consideration, and immediate action was taken. Copies of the specification in its draft form were forwarded to representatives of the railway administrations, bridge manufacturers, and others interested, with a request for criticism and suggestions, and with the view of obtaining as wide acceptance as possible. As a result a large number of suggested amendments were sent in, not only from members of the original E.I.C. committee, but also from the various bridge companies and steel makers, who were consulted as to any possible difficulties arising from the contractors' and manufacturers' point of view. These communications were considered at a meeting of the sectional committee on Jan. 27, 1920, a number of amendments were decided upon, and the specification as thus modified was submitted to the

main committee on April 12, 1920.

"In view of the obvious desirability of agreement between a Canadian specification of this kind and similar documents prepared by authoritative bodies in the United States, the sub-committee and the sectional committee have carefully considered the bridge specifications of the American Railroad Engineering Association and the specifications for bridge materials issued by the American Society for Testing Materials. It is believed that the specification in its present form, while not in absolute agreement with the U.S. specifications on all points, will be found to be in substantial agreement therewith, the principal points of difference being such as are found desirable in order to comply with Canadian conditions.

"The specification was adopted by the sectional committee on steel bridges on Jan. 27, 1920, and was approved by the main committee on April 12, 1920."

Starting Engines on Locomotives.

Locomotives with "booster" or starting engines on the trailing axles to give increased power in starting are being tried on the New York Central Rd. as a means of increasing the efficiency in handling heavy passenger and freight trains. A 2 cylinder inclosed horizontal engine, mounted at the rear of the frame of the trailing truck, drives a pinion, which, through an idler, drives a gear on the trailing axle. The locomotive man can put this "booster" in operation only when the reversing lever is in full position and the throttle is open. When he notches up the lever the booster is cut out automatically and is disengaged so that it cannot become a load on the locomotive when running at ordinary speeds. The additional weight is about 3,500 lb. but is said to be equivalent to increasing the adhesion weight of the engine by about 25 tons. It is intended to give an increase of 25 to 30% in drawbar pull for different types of locomotives, thus ensuring a steady and even start, which reduces damage to the locomotive and the cars.

Engineering Institute of Canada.—A branch of this Institute was organized in Moncton, N.B., Oct. 11, when the following officers, etc., were elected:—Chairman, W. A. Duff, Assistant Chief Engineer, C.N.R.; Vice Chairman, J. D. McBeath; Secretary-Treasurer, M. J. Murphy; Committee: R. McManus, R. G. Gage, J. E. Dington, F. B. Fripp, S. B. Wass, H. G. Grudge.

Railway Lands Patented.—Letters patent were issued during September respecting Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Canadian Northern Alberta Ry.	Acres. 152.58
Canadian Northern Pacific Ry.	75.83
Canadian Northern Western Ry.	8.19
Canadian Pacific Ry.	212.97
Total	448.67

The West Kootenay Power & Light Co., of which C. R. Hosmer, one of the C.P.R. directors, is President, is reported to have completed the extension of its power line from Greenwood to Copper Mountain, B.C., 108 miles, in connection with the mining developments at Copper Mountain, to provide railway accommodation for which the Kettle Valley Ry. has built a branch line from Princeton.

Steel Rails Manufacture.

Montreal press dispatch Oct. 11:—The outlook for the continued operation of the Dominion Iron & Steel Co.'s rail mill during the winter is not encouraging. Since Mar. 31 last, the only contract obtainable for rails has been one from the Canadian National Rys., for 7,500 tons. This contract was placed at a low figure. The actual production of the rails has resulted in a cost substantially in excess of the price received. Enquiry at the company's office brings the information that competition in the rail market is becoming increasingly keen, and a reduction, rather than an increase, in price is apprehended, and in that connection it is pointed out that if for any reason the cost of steel production be increased, the operation of the rail mill will become increasingly difficult. The rail mill's capacity for production is much greater than that of any other of the finishing mills operated by the company. With favorable conditions and a possible market, a monthly output of from 15,000 to 20,000 tons would be available.

Forgery of C.P.R. Official's Name.—A. J. Robinson was committed for trial at Montreal, Oct. 20, on two charges of forgery and one of fraud, in connection with cheques for \$50, \$55 and \$25, each of which purported to be signed by "Grant Hall, V.P., C.P.R." Mr. Hall stated in court that he did not know the person handling the cheques, that at the time he was supposed to have signed the cheques he was not in Montreal, that the signature purporting to be his did not in any way resemble it, and that he never signed cheques with the letters as shown after his name.

Canadian Superheater Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital and office at Montreal, to manufacture and deal in all kinds of apparatus and merchandise which may be used in the transportation of persons and property in any manner whatsoever, including railway passenger and freight cars, street cars, car trucks, etc. The incorporators are: N. J. Holden, A. Allan, V. G. R. Vickers, W. Palmer, and G. C. Palmer, all associated with The Holden Co. Ltd., railway supplies, Montreal.

Edmonton, Dunvegan & British Columbia Ry. Terminals, Etc.—The Edmonton, Dunvegan & British Columbia Ry., and the Central Canada Ry., which are being operated by the C.P.R., under a 5 years arrangement with the Alberta Government, have heretofore used the Grand Trunk Pacific Ry. terminals at Edmonton, but it is probable that an arrangement will be made for the joint use of the C.P.R. terminals at Edmonton and Strathcona, and that this will include the handling of shop repairs by the C.P.R.

The American Railway Engineering Association's executive committee met in Montreal, Oct. 11, H. R. Safford, formerly Chief Engineer G.T.R., and now Assistant to President, Chicago, Burlington & Quincy Rd., presiding. After the transaction of business the members were the guests at a dinner given by the Engineering Institute of Canada, and on Oct. 12 were taken by special train to the Quebec Bridge, the day being spent in an inspection of the structure.

Canadian National Railways Social Club.—Employees of the C.N.R. in Vancouver, B.C., have formed a social club, and a meeting for the adoption of the constitution, etc., was held Oct. 7.

Transportation Appointments Throughout Canada.

The Commission from the Board of Directors of the Canadian National Railway Company, has appointed the following officers to the various positions mentioned below, effective from the date of their appointment.

Algoma Eastern Ry.—**G. A. MONTGOMERY**, formerly Vice Pres. and Gen. Mgr., has been appointed Gen. Mgr. Office, 230 St. James St., Montreal.

Canadian Car Demurrage Bureau—**F. J. ARLY**, formerly appointed Inspector at Montreal, has been appointed Inspector at Montreal, Office, 230 St. James St., Montreal.

F. J. DOWNEY, formerly appointed Inspector at Montreal, has been appointed Chief Inspector, vice A. J. Letch, promoted. Office, Toronto.

A. J. LETCH, formerly appointed Chief Inspector at Montreal, has been appointed Assistant Manager, Eastern Lines, vice M. J. Rice, deceased. Office, Montreal.

C. H. THURBER, heretofore at Peterborough, Ont., has been appointed Inspector at Montreal, Office, 230 St. James St., Montreal.

Canadian Government Merchant Marine—**J. P. DOHERTY**, heretofore Port Agent, St. John, N.B., has been appointed Export Freight Agent. Office, 230 St. James St., Montreal.

C. H. HICKIE has been appointed Assistant Treasurer, in charge of Canadian Government Merchant Marine Ltd. and Grand Trunk Pacific Ry. general accounts. Office, Toronto.

J. W. N. JOHNSTONE, formerly Secretary to President, Reid Newfoundland Co., St. John's, Nfld., has been appointed General Agent for Newfoundland, Canadian National Rys. and Canadian Government Merchant Marine Ltd. Office, St. John's, Nfld.

W. H. THOMPSON, heretofore Assistant Export and Import Freight Agent, has been appointed Import Freight Agent. Office, 230 St. James St., Montreal.

Canadian National Rys.—**T. H. BEST** has been appointed Assistant to Treasurer, Canadian Northern Rys. System-Grand Trunk Pacific Rys., in charge of general accounts, etc. Office, Toronto.

H. C. Michigan Central Rd.—C. W. ADAMS, heretofore General Foreman, Locomotive Department, St. Thomas, Ont., has been appointed Superintendent of Shops, Jack-

M. E. BLUNSON, Assistant General Foreman, has been appointed General Foreman, Inspection Department, 85 Victoria Street, C. W. Station, Montreal.

Travelling Engineers Association's Convention.

THE A. S. T. Travelling Engineers Association, which was organized at the travelling engineers' convention, held in its opening address, in part, as follows:—
One of the most important items in which the travelling engineer is directly concerned, and which, if properly handled, becomes a most important factor in ascertaining that which is the duty and right of every operating official on all well conducted railways, is the matter of increased efficiency and reduced expenses of operation. This, owing to the high cost of material and the continued demand for higher wages, is of greater interest and importance at the present time than ever before. During the past few years, in particular during the great war, special efforts were made, I believe, by each and every man employed in the operation of railways of this country to conserve coal in particular and to successfully operate the railways at the lowest possible expense in general. In this the travelling engineer or road foreman took no small part. Many of our members have been called upon to take up important positions in connection with this matter and have proved beyond doubt that they were equal to the occasion and worthy of that calling.

"It is just as important to save coal and supplies today as it ever has been, and to maintain the record and reputation that we as travelling engineers have attained by zealously guarding the power, fuel and supplies of all kinds under our charge and seeing that the best possible use is secured from them. The cost of coal, oil, and supplies of all kinds is greater today than it has ever been before. Therefore there should be no relaxation on our part in any way, but every effort should be put forth to get more skillful operation of the locomotives on the road with increased efficiency in handling trains at the lowest possible cost of operation.

"The drastic labor conditions that prevail throughout the country are cause for great anxiety and concern. There is social, racial, and industrial unrest everywhere, brought about to a great extent by the spirit and practice of profiteering and the high cost of living. Strikes and treups have taken place; in some cases due to over zealous, self appointed would-be labor leaders more than to anything else. The fact that strikes have occurred, illegally in some cases, goes to show that many men have been led through the condition of unrest and the influence of the would-be leaders to take part in these strikes. The travelling engineers, whose conservatism and loyalty have never been questioned and who are scattered throughout the different parts of the country and who come in contact with a great many of the railway employees, can do a great deal toward influencing the rank and file of the men toward taking the right view of the critical conditions as they exist. If ever there was a time in the world's history when calm and cool judgment should be exercised, now is the time.

Venerable Diseases Notices on Railways.

The Board of Railway Commissioners passed general order 315 Sept. 29, as follows:—Re application of Dominion Department of Public Health, under the provisions of the Railway Act, 1919, for permission to place signs dealing with the prevention and spread of venerable disease, in passenger cars and railway station lavatories. Upon its being represented to the Board that the signs in question are issued under the authority of the Dominion Department of Health, and reading what is filed in support of the application, the Board orders that permission be granted the applicant to place signs dealing with the prevention and spread of venerable disease in all passenger cars and station lavatories of railway companies in Canada subject to the Board's jurisdiction, provided that a notation be carried on the bottom of each copy of the sign set up or placed under the provisions of this order to the effect that the same is issued under the authority of the Dominion Department of Health.

The C.P.R.'s Entrance into Northern Alberta.

The following editorial appeared in the Edmonton, Alta., Journal recently:—"The Journal has laid great emphasis from the first, on the immense impulse to the development of Northern Alberta which has been given by the entrance of the C.P.R. there. All the news which comes from that part of the province indicates that the greatest confidence has been inspired by the event and that everyone is busy and optimistic and that the coming year will see a most wonderful transformation there. The Edmonton Bulletin had an article calling attention to the interruption of traffic which took place during the previous week as a result of the overflow of the waters of Lesser Slave Lake. This was a most unusual occurrence and came at a most unfortunate time. Six miles of track was affected. The editor went on to say:—

"The best of will, without capital equipment and equipment, could have repaired the line, so many days. Traffic would have been stopped and a great country and population would have been tied up indefinitely. With the means available and the means to use them the line, which occurred on Tuesday was repaired on Sunday. The quick action taken and satisfactory results achieved in this instance are an assurance to the people of Peace River that rail traffic will be maintained under all possible circumstances and conditions. This assurance is the result of the recent arrangement between the Alberta Government and the C.P.R. whereby that company becomes responsible for the efficient operation of the railway. If there ever was any question as to the satisfactory operation of the railway there is none now. This is the basis of all investment of time, labor or money in the Peace River country."

The Journal is aware that, in quoting an extract of this length from the editorial page of its local contemporary and giving its complete approval to the views therein expressed, it makes this a red letter day in the history of Edmonton. But there it is. It desires to add, however, a thought of its own, as the Sunday school superintendent is wont to say, that the C.P.R. could not have accomplished all this if it were not a well organized business concern, with very large resources.

"In the past, in the columns of The Bulletin and in the columns of most other Canadian newspapers, the possession of these resources has been regarded as a public evil. Railway prosperity has been

viewed as if it constituted a grievance. Whenever anyone has the courage to say that it was not for the general good to adopt measures which would unduly weaken the C.P.R. and other railways, he has been invariably described as the paid agent of the corporation controlling these. Much language of this kind has been heard throughout the country in recent weeks, in connection with the discussion of the application for an increase in railway rates. We do not think, however, that for some time at least the people of Northern Alberta will begrudge the C.P.R. its prosperity or be anxious to have this seriously impaired. Neither they nor any of the other producers of the Dominion can regard with indifference any attempt on the part of that corporation to make unfair exactions. But at the same time they must recognize that it is not for their good that it should be reduced to the impecunious status of the average transportation system of this continent."

Canadian National Railways Earnings.

	1920	1919

Canadian National Railways' Directors' Western Inspection Trip.

D. B. Hanna, President, Canadian National Rys., left Toronto Oct. 8 for Ottawa, and started from there the next day for an inspection trip over the C.N. R. western lines, accompanied by two other directors, Thos. Cantley, and Robt. Hobson; another director, R. T. Riley, joining them at Winnipeg. The party were accompanied throughout the trip by the following officials:—S. J. Hungerford, Vice President, Operation and Maintenance; R. P. Ormsby, Secretary; C. B. Brown, Engineering Assistant to Vice President, Operation and Maintenance; D. Crombie, Transportation Assistant to Vice President, Operation and Maintenance; C. S. Gzowski, Jr., Assistant to Vice President in charge of Construction; and A. T. Weldon, Assistant Freight Traffic Manager, Montreal. F. P. Brady, General Manager, Eastern Lines, accompanied the party to Winnipeg and they were met at Port Arthur by A. E. Warren, General Manager, Western Lines, who accompanied them to the Pacific coast and back to Winnipeg. The following officials went from Winnipeg to the Pacific coast and return:—C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President Operation and Maintenance; H. A. Dixon, Chief Engineer, Western Lines; A. H. Eager, Mechanical Superintendent, Western Lines; A. McCowan, Master Car Builder, Western Lines. J. R. Cameron, Assistant General Manager, Vancouver, met the party at Edmonton and accompanied them to Prince Rupert, Vancouver, Victoria, and back to Lucerne, B.C. Local operating officials travelled on the train over their respective jurisdictions.

The party travelled by special train, the route being via C.N.R., Ottawa to Edmonton; Grand Trunk Pacific Ry., Edmonton to Prince Rupert, and back to Lucerne, B.C.; C.N.R., Lucerne to Vancouver; steamship Vancouver to Victoria; C.N.R., Victoria to end of track, towards Alberni, and return; steamship, Victoria to Vancouver; C.N.R., Vancouver to Edmonton, Drumheller and Saskatoon; G.T.P.R., Saskatoon to Winnipeg; National Transcontinental Ry., Winnipeg to Cochrane; Timiskaming & Northern Ontario Ry., Cochrane to North Bay, and C.N.R. from North Bay, via Capreol, to Toronto, which was reached Oct. 27.

During the trip Mr. Hanna discussed business matters with a number of individuals, boards of trade, etc. He and his party were entertained at luncheon at Vancouver by the board of trade.

Suit Against Dominion Government for Ordering Steel Rails Manufacture.

Ottawa press dispatch, Oct. 25.—Three million dollars is at stake in a case brought before the Exchequer Court today. Because Hon. J. D. Reid, Minister of Railways, directed the Dominion Iron & Steel Co. to divert its organization from the making of shell steel to the manufacture of steel rails, the company demands that under the compensatory clause of the War Measures Act it shall have made good to it the additional profits it would have made on shell steel for the Minister's order. The order in council through which the Minister made his order effective stated that he would himself set the price later after finding

out the cost of production. The price set later was \$65 a ton, and the dispute is whether the order in council or the compensatory clause of the War Measures Act governs. Wallace Nesbitt, K.C., E. M. McDonald, K.C., and Hector McInnes, K.C., appear for the steel company, and Messrs. Meredith and Holden for the Government. The steel rails were for the railways, the latter have an incidental interest in the enquiry. The C.P.R. is represented by W. N. Tilley, K.C., the Grand Trunk by W. C. Chisholm, and the T. & B. Ry. by Mr. Sewell, K.C., of Hamilton.

Authority to Seize and Sell Coal and Coke Not Unloaded Promptly.

General order 316. Oct. 5, as follows: Re the question of the coal supply of Canada; and in the matter of expediting the transportation performance of coal carrying equipment in Canada, and the powers conferred upon the Board by chap. 66 of the Acts of the Parliament of Canada, 1920. Upon its appearing to the Board that there is a shortage of coal carrying equipment, and that the rate at which coal cars have been, and are being, unloaded is impeding the full utilization of available equipment, and in pursuance of the powers conferred by the said act, chapter 66, 1920, the Board doth order, that whenever, by reference from the Board or otherwise, it comes to the knowledge of the fuel administrator for the time being of any province, duly appointed by the government of such province, that any freight car containing coal or coke has remained under load at its destination or elsewhere on any railway in Canada for a longer period than six days after arrival, the fuel administrator may notify the consignee by registered mail, or by telegram, that unless the said car is unloaded, or furtherance order given as the case may be, within two days after date of such notice, the fuel administrator will take the action hereinafter outlined, and the fuel administrator may thereupon authorize the railway company to seize the contents of the said car, and summarily offer the same for sale to the municipality at which the said car is seized, and to any coal or coke dealers at the said point, and to sell the same to the municipality or the dealer offering the highest price therefor; and after paying all charges that may be due and chargeable thereon, as well as the expenses connected with the seizure and sale, the railway company shall pay the balance, if any, of the proceeds of such sale to the consignee or to the consignor, as their interest may appear. The Board doth further order that any fuel administrator taking action under the foregoing paragraph shall thereupon report to the Board what action has been taken by him, together with recommendations for any further action he may deem necessary.

Phoenix Contracting Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Vancouver, B.C., to carry on a general construction business, including ships, piers, wharves, breakwaters, and harbor development works, railways, etc.

The trial of a number of C.P.R. conductors for irregularities in connection with selling tickets on trains, which was fixed to come off in the Court of King's Bench, Montreal, on Oct. 13, was postponed to Nov. 10.

Railway Rolling Stock Orders and Deliveries.

The C.P.R. has received a shipment of 100 tons of engine oil from Canadian Locomotive Works.

The Pacific Great Eastern Ry. has received a large order of Pacific type locomotives from Montreal Locomotive Works. The order amounts to \$4,100,000.

The C.P.R. has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Railway and Canal Department, Ottawa, has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Red Newfoundland Co.'s 200 car trucks, which Canadian Car & Foundry Co. is building, will be of the arch bar type. The trucks will be equipped with McCord journal boxes for 3 3/4 x 7 in. journals, Simplex I beams, brake beams, axles with M.C.B. 3 3/4 x 7 in. journals, wooden truck bolster, trussed wood-

Work, 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Pacific Great Eastern Ry. has received a large order of Pacific type locomotives from Montreal Locomotive Works. The order amounts to \$4,100,000.

The C.P.R. has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Railway and Canal Department, Ottawa, has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Lake Superior Paper Co. has ordered a 6 wheel switching locomotive from Montreal Locomotive Works. The chief details are as follows:

Weight, 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Pacific Great Eastern Ry. has received a large order of Pacific type locomotives from Montreal Locomotive Works. The order amounts to \$4,100,000.

The C.P.R. has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Railway and Canal Department, Ottawa, has received a shipment of 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

The Lake Superior Paper Co. has ordered a 6 wheel switching locomotive from Montreal Locomotive Works. The chief details are as follows:

Weight, 100 tons of engine oil from Canadian Locomotive Works. The order amounts to \$4,100,000.

Pacific Great Eastern Ry. Mikado Locomotive.

at Transcona and Winnipeg, going north. The wheel base will be 5 ft. 3 1/2 in., top of rail to top of bolster 2 ft. 3 in., center of side bearings 4 ft. 1 in.

Canadian National Ry.s. rolling stock receipts to Oct. 9, on account of orders placed early in the year, were as follows: 13 Santa Fe (2-10-2) locomotives, out of an order for 25, from Montreal Locomotive Works; 20 switching (0-6-0) locomotives, out of an order for 30, from Canadian Locomotive Co.; 924 general service cars out of an order for 1,150, from Eastern Car Co.; 552 box cars, out of an order for 1,000; 21 refrigerator cars, out of an order for 600, and 79 cabooses, out of an order for 80, from Canadian Car & Foundry Co.; 70 box cars, out of an order for 1,500, from National Steel Car Co.; 350 Hart-Otis ballast cars, completing order, from Hart-Otis Car Co.; 7 cabooses, out of an order for 20, from Preston Car & Coach Co. and 10 cabooses, out of an order for 30, from the C.N.R. shops, Transcona, Man.

The Pacific Great Eastern Ry. Mikado locomotive, illustrated on this page, is one of three built for that road by the Canadian Locomotive Co. The chief details are as follows:—

Oil used, 22,000 lb.
Weight, 22,000 lb.

Wheel base, 11 ft.
Cylinders, dia. and stroke, 18 x 24 in.
Driving wheel dia., 36 in.
Journals, 3 3/4 x 7 in.
Heating surface, tubes, 1,347 sq. ft.
Heating surface, firebox, 197 sq. ft.
Heating surface, total, 1,544 sq. ft.
Factor of adhesion, 4.1
Tender wheel dia., 34 in.
Tender axle, 4 in.
Tender frame, steel plate
Tender wheel dia., 34 in.
Tender axle, 4 in.
Tender frame, steel plate

The Haytian American Corporation has ordered one 4-wheel (0-4-0) locomotive, and one mogul (2-6-0) locomotive from Montreal Locomotive Works. The chief details of each are as follows:—

Weight on drivers, 23,000 lb.
Weight on trailer, 23,000 lb.
Weight, total, 46,000 lb.
Wheel base, 4 ft. 9 in.
Cylinders, dia. and stroke, 18 x 24 in.
Driving wheel dia., 30 1/2 in.
Journals, 3 3/4 x 7 in.
Heating surface, tubes, 1,347 sq. ft.
Heating surface, firebox, 197 sq. ft.
Heating surface, total, 1,544 sq. ft.
Factor of adhesion, 4.1
Tender wheel dia., 34 in.
Tender axle, 4 in.
Tender frame, steel plate

Factor of adhesion, 4.1
Heating surface, tubes, 1,347 sq. ft.
Heating surface, firebox, 197 sq. ft.
Heating surface, total, 1,544 sq. ft.
Factor of adhesion, 4.1
Tender wheel dia., 34 in.
Tender axle, 4 in.
Tender frame, steel plate

The C.P.R., as announced in our last issue, has ordered 15 Mikado (2-8-2) locomotives from Montreal Locomotive Works. Following are the chief details:

Weight on drivers, 23,000 lb.
Weight on trailer, 23,000 lb.
Weight, total, 46,000 lb.
Wheel base, 4 ft. 9 in.
Cylinders, dia. and stroke, 18 x 24 in.
Driving wheel dia., 30 1/2 in.
Journals, 3 3/4 x 7 in.
Heating surface, tubes, 1,347 sq. ft.
Heating surface, firebox, 197 sq. ft.
Heating surface, total, 1,544 sq. ft.
Factor of adhesion, 4.1
Tender wheel dia., 34 in.
Tender axle, 4 in.
Tender frame, steel plate

Flues, no. and diar.	40-54 1/2 in.
Heating surface, tubes	2,247 sq. ft.
Heating surface, flues	1,060 sq. ft.
Heating surface, f.b. tubes	43 sq. ft.
Heating surface, firebox	274 sq. ft.
Heating surface, total	3,664 sq. ft.
Superheating surface	845 sq. ft.
Grate area	70.3 sq. ft.
Tractive power	56,147 lb.
Factor of adhesion	1.17
Superheater.....Locomotive Superheater, type A	
Reverse gear	Racoonet
Cab	C.P.R. standard vestibule
Tender frame	Commonwealth cast steel
Tender wheel, diar.	36 1/2 in.
Tender truck, type	C.P.R. standard pedestal
Tender journals	6 x 11 in.
Frame cradle	Commonwealth
Tank, type	Water bottom
Water capacity	8,000 imp. gall.
Coal capacity	14 tons

The Canadian National Rys. Santa Fe locomotives, 25 of which were ordered early in the year from Montreal Locomotive Works, and which has been delivered, have the following chief details:—

Cylinders, diar. and stroke	26 x 32 in.
Tractive power	64,500 lb.
Factor of adhesion	1.20
Wheel base, driving	20 ft. 6 in.
Wheel base, total	37 ft. 10 in.
Wheel base, engine and tender	70 ft. 10 1/2 in.
Weight in working order	319,300 lb.
Weight on drivers	257,800 lb.

Weight on trailer	29,600 lb.
Weight on engine truck	32,000 lb.
Weight, engine and tender	518,500 lb.
Boiler, type	Extended wagon top
Boiler, diar. inside first ring	78 in.
Boiler pressure	200 lb.
Firebox, length and width	144 1/4 x 84 1/2 in.
Crown staying.....Radial button head and	
Tubes	Also flexible
Flues, no. and diar.	45-54 in.
Heating surface, tubes	2,230.83 sq. ft.
Heating surface, flues	1,022.99 sq. ft.
Heating surface, firebox	245 sq. ft.
Heating surface, arch tubes	41 sq. ft.
Heating surface, total	3,539.82 sq. ft.
Superheater surface	850 sq. ft.
Grate area	66.7 sq. ft.
Driving wheels, diar.	57 in.
Driving wheels, type.....main, cast steel;	
others, cast steel, steel tired	
Engine truck wheels, diar.	31 1/2 in.
Trailing truck wheels, diar.	31 1/2 in.
Tender truck wheels, diar.	31 1/2 in.
Driving journals	11 1/2 x 22 in.
Engine truck journals	7 x 12 in.
Trailing truck journals	7 x 12 in.
Tender truck journals	6 x 11 in.
Journal boxes.....main, Cole cast steel;	
others, cast steel	
Air brake.....Westinghouse E.T.6	
Tender frame	Steel channel
Tank, type	Water bottom
Water capacity	8,300 imp. gall.
Coal capacity	17 tons

Freight and Passenger Traffic Notes.

The Board of Railway Commissioners has dismissed the Canadian National Rys. application to discontinue stopping trains 5 and 6, at Richmond, Ont.

The Delaware & Hudson Co. has taken for its exclusive use the ticket office at 238 St. James St., Montreal, which for the past two years has been operated as a consolidated ticket office.

The C.P.R. Trans-Canada Limited 7 and 8, operating between Montreal and Vancouver, both ways, started from the two terminal points Oct. 2 on their last trips for this year.

The Board of Railway Commissioners has refused to order the C.P.R. to replace an agent at Reaburn Station, Man., as the earnings do not amount to \$15,000 a year.

A special G.T.R. train carrying a United States financial man, left Montreal on Oct. 1 at 2 a.m. for Toronto, which was reached in seven hours, an average speed of 47.7 miles an hour.

The Board of Railway Commissioners has recommended the sanctioning of an agreement between the C.P.R. and the Pere Marquette Rd., for the joint use of C.P.R. facilities at Windsor, and Walkerville Jct., Ont.

The New York Central Lines, and the Rutland Rd., which for the past two years have been using the consolidated ticket office at 238 St. James St., Montreal, have opened a joint ticket office at 9 Victoria Square, Montreal.

Hon. W. F. Coaker, Chairman of the Newfoundland Railway Commission, is reported to have announced that passenger rates on the Reid Newfoundland Ry. are to be increased 1c. a mile, and that an increase in freight rates will probably be made.

Detroit, Mich., people are, a press report states, buying railway tickets for United States points in Windsor, Ont., are saving money by so doing, owing to exchange rates, and the difference between the Canadian and the United States war tax.

The Alberta & Great Waterways Ry. is, we are officially advised, operating under the Alberta Government's management a mixed train, twice a week on Mondays and Thursdays from Edmonton

to Lac la Biche, and on Tuesdays and Fridays from Lac la Biche to Edmonton.

The Grand Trunk Ry., beginning Oct. 3, attached to the Montreal-Toronto train leaving Montreal at 7.30 p.m. an additional sleeping car for Kingston Jct., and Trenton, Ont. Returning, the car leaves Trenton at 9.10 p.m. and Kingston Jct. at 1.55 a.m. It is operated daily, except Sunday.

The Western Canadian Passenger Association is reported to have notified the Winnipeg Social Welfare Commission that after Oct. 1 no half fare tickets would be granted for the transportation of aged persons, or those with incurable diseases from Winnipeg to places where they can be cared for.

The Canadian National Rys. car ferry between Cape Tormentine, N.B., and Borden, P.E.I., is now making only one regular trip a day each way on week days only. Connection is made with the 1.15 p.m. Sackville-Cape Tormentine train, by trains leaving Moncton at 8.55 a.m. and 10.55 a.m.; by the train leaving St. John at 7.10 a.m., and by trains leaving Halifax, N.S., at 7.40 a.m. and 8.10 a.m.

The Canadian National Rys. are reported to have inaugurated a new freight service, Oct. 11, from Regina to Moose Jaw and Riverhurst, Sask., on Mondays, Wednesdays and Fridays, returning to Regina on Tuesdays, Thursdays and Saturdays; and from Regina to Moose Jaw and Radville, Sask., on Tuesdays, Thursdays and Saturdays, returning to Regina, Mondays, Wednesdays and Fridays.

The Board of Railway Commissioners has dismissed a complaint by Thos. McClymont, Prince Rupert, B.C., that the Grand Trunk Pacific Ry. rate of \$2.40 a net ton from Telkwa to Prince Rupert is excessive and discriminatory, compared with the rate charged by the railway from mines located on its Alberta lines, as it had not been established that the rate was contrary to the regulatory sections of the Railway Act.

A Newfoundland press report states that the cross-country train service on the Reid Newfoundland Ry. will be discontinued during the winter, and that trains will only run from St. John's to Millertown Jct., 310 miles. During the winter of 1919-20 the railway through

the Topsonto District, lying between Millertown Jct. and Port aux Basques, was so blocked by snow and ice that traffic was suspended for a considerable period.

The Canadian National Rys. took over the operation of the Quebec & Saguenay Ry., from Quebec to La Malbaie (Murray Bay), on Oct. 1. The train service is as follows:—Monday, Wednesday and Friday, leave La Malbaie 8.45 a.m., arrive Quebec 1.30 p.m.; leave Quebec 12.30 p.m., arrive La Malbaie 6.50 p.m. Tuesday, Thursday and Saturday, leave La Malbaie 7.15 a.m., arrive Quebec 1.30 p.m.; leave Quebec 12.30 p.m., arrive La Malbaie 5.05 p.m.

The Pacific Great Eastern Ry. is reported to have inaugurated a combined steamboat and train service twice-a-week from Vancouver to Williams Lake, at mile 277.8 on the railway. The Terminal Steamship Line runs a steamboat leaving Vancouver at 9.15 a.m. on Wednesday and Saturday for Squamish, where passengers, etc., are transferred to the train, which reaches Williams Lake at 5.45 a.m. on Thursday and Sunday. The return train leaves Williams Lake at 10 p.m. on Sunday and Thursday, and Vancouver is reached at 7.30 p.m. on the following days.

The Canadian National Rys., following the co-ordination of perating which has been arranged between the C.N.R., the G.T.R., and the G.T. Pacific Ry., has put in operation a new daily train service between Montreal and Vancouver, which with connecting trains to and from the Atlantic coast, Toronto and other points, and Prince Rupert, gives practically through service from coast to coast, with a double daily service between Montreal and Winnipeg, and the choice of alternative routes west of Winnipeg. The service is operated from the Maritime Provinces to Montreal by the Ocean Limited and connecting trains from Sydney and St. John. The new train starts from Bonaventure station, Montreal, at 5 p.m. daily and runs over the G.T.R. to Ottawa, and thence over the C.N.R. via North Bay, Capreol and Port Arthur to Winnipeg, which is reached at 8.45 p.m. central time, on the second day. The second service between Montreal and Winnipeg is the train known as the National, which runs over the G.T.R. from Montreal via Toronto to North Bay, over the Timiskaming & Northern Ontario Ry. to North Bay to Cochrane, and over the National Transcontinental Ry. from Cochrane to Winnipeg. The new transcontinental train is run over the G.T. Pacific Ry. from Winnipeg via Saskatoon to Edmonton and over the Canadian Northern Ry. from Edmonton to Vancouver, connecting three days a week at Jasper, B.C., with a G.T.P.R. train to Prince Rupert. Starting from Halifax, N.S., at 8.10 a.m. on say, a Monday, the trip to Vancouver is completed at 9 a.m. on the following Sunday. The train equipment used on the route consists of Compartment, observation car between Montreal and Vancouver; standard sleepers between Halifax, Sydney, Moncton and Montreal; between Montreal and Vancouver; Winnipeg and Edmonton, Winnipeg and Prince Rupert; Edmonton and Vancouver. Dining car between Halifax and Montreal; Montreal and Winnipeg; Winnipeg and Vancouver; Montreal and Vancouver. Tourist sleeper between Montreal and Vancouver. Standard first class cars and colonist cars—all steel equipment.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

The Alberta & Great Waterways Ry. Co. has been authorized by the Government to build a line from Edmonton to the Peace River, a distance of 100 miles. The line is to be built in stages, the first stage being from Edmonton to the Peace River, a distance of 100 miles. The line is to be built in stages, the first stage being from Edmonton to the Peace River, a distance of 100 miles.

The former directors have been replaced by the following members of the Alberta Government:—President, Hon. C. Stewart; Vice President and Treasurer, Hon. C. R. Mitchell; other directors:—Hon. J. R. Boyle, Hon. A. J. McLean. The officials in charge of operation are: General Manager, N. L. Harvey, Deputy Minister of Railway and Telegraphs; Secretary, L. Scott; Chief Engineer and Superintendent, H. A. Warner.

A press report states that a contract has been let to the Northern Construction Co., Vancouver, B.C., for the operation, maintenance and completion of the line from Lac la Biche to McMurray on a cost plus 10% basis. A gang of men is reported to have begun operations at the end of September north of Lac la Biche, and it was expected to have 300 men at work before winter thoroughly set in. All the construction work is to be done under the direction of the government engineers. (Oct., pg. 550.)

Since the above paragraph was put in type the Northern Construction Co. has advised us that it has received the contract and has furnished the following information:—Lac la Biche is the first division point north of Edmonton, being at mile 113. The line is now built to about mile 275, within 20 miles of Fort McMurray, which is its ultimate terminus. There will be very little construction work carried on this winter, with the exception of ballasting, etc., from Lac la Biche to the end of steel, a quantity of ties will be taken out and grading proceeded with from end of steel to Fort McMurray. R. A. Kennan will be in charge of the work as Superintendent for the Northern Construction Co., with office at Edmonton. (Oct., pg. 550.)

Canadian Niagara Bridge Co.—The route map of the proposed railway to be built in Ontario, and in New York State, and the location of the bridge across the Niagara River, shows a line starting from the Michigan Central Rd., 3.15 miles from Welland on the Welland-Niagara Falls line, in an almost straight line through Crowland and Willoughby Tps., to the west bank of the Niagara River, approximately 8.50 miles. The railway will cross Grand Island also in a straight line, and after the second crossing of the Niagara River will run northeasterly to make connection with the New York

Central Rd. The route of the line in Canada has been approved by the Board of Railway Commissioners. E. W. Beatty, President, C.P.R., is President of the C. N. B. Co., and R. L. Latham, Chief Engineer, Toronto, Hamilton & Buffalo Ry., Hamilton, is Chief Engineer, C.N.B. Co. (Oct., pg. 550.)

Maurice C. Spratt, New York Central Rd. Attorney, is reported, in a Bridgeburg, Ont., press dispatch, to have said on Oct. 20:—All work on the bridge to be built over the Niagara River at Black Creek, six miles below Bridgeburg on the Canadian Niagara boulevard, and Grand Island, N.Y., will be held up till spring, when a definite start will be made. More has been done in the past two months than in any previous time since the Canadian-Niagara Bridge Co. secured its charter. The pier holes have been tested and gauged, the right of way optioned, and a large part of Grand Island has been purchased by the New York Central Rd. The right of way from the Michigan Central terminals have been optioned, as well as the A. Weaver farm, which will be the site of the Canadian approach.

Cape Breton Coal, Iron & Ry. Co.—A press report states that the Cape Breton Coal, Iron & Ry. Co., of which H. J. Mayhew, London, Eng., is President, is about to reopen its coal mines at Broughton, N.S. The Broughton colliery was opened up a number of years ago, and under a charter granted by the Nova Scotia Legislature in 1895 the company was authorized to build a railway and to develop a shipping port. Nothing was done under this act until 1903, when a company of which Mr. Mayhew was President obtained control, and between that date and 1905, over \$1,000,000 was said to have been spent in sinking shafts and in building a town at Broughton. A spur line of railway from the collieries to a junction with the Sydney & Louisburg Ry. at Homeville Jct., was completed in 1905, and preparations were made for shipping the output at Louisburg. The company got into financial difficulties, and after some ineffectual attempts were made to sell the property, operations ceased towards the end of 1906, or early in 1907. The colliery is reported to have become full of water. (May, 1907, pg. 323.)

The Dominion Atlantic Ry. has carried out considerable work during the past season on its property in Nova Scotia. About 20 miles of main line track have been relaid with 85 lb. steel rails, replacing 56 and 65 lb. About 10 miles of ballasting have been done, between Elberhouse and Mount Uniacke.

At Kentville the company's headquarters, the 2½ story station and office building has been extended for 40 ft., providing for restaurant and luncheon room and additional office accommodation. An improved station 130 x 30 ft. has been built at Digby, as described in Canadian Railway and Marine World for March, pg. 135. A 25,000 gall. water tank has also been built there.

At Kentville the following buildings have been erected, boiler and power house, 30 x 36 ft.; machine and erecting shop, 60 x 180 ft.; blacksmith and moulding shop, 30 x 144 ft.; turntable, 70 ft., operated by Pilling air tractor. The boiler house has a 36 in. brick stack, 60 ft. high, on concrete base, and is equipped with boilers of 290 h.p. The ma-

chine and erecting shop has an overhead gallery, for tin shop and general foreman's office, in the machinery end, and the erecting shop has two tracks, and an 80 ft. concrete inspection pit, with driving wheel drop pit, equipped with air operated wheel jack. The blacksmith shop has 6 forges and the moulding shop is equipped with forge and brass furnace. The buildings have wood framing, with Bishopric stucco board and cement stucco on outside, the roofing is heavy paroid. All buildings are steam heated and electric lighted. The new shops are located so as to provide for future extensions to the locomotive shed, also car and paint shop, with necessary trackage.

About half a mile from Grand Pre village, Grand Pre Park has been established, in the dyke lands, with an area of 14 acres. It has a rustic gatehouse, and is enclosed with a rustic fence, has a water garden for aquatic plants, and contains a monument of Evangeline, Longfellow's heroine.

Edmonton, Dunvegan & British Columbia Ry.—J. A. Macgregor, General Manager, is reported to have stated recently that improvements on the line are being carried out steadily, as far as the shortage of labor will permit. The work being done consists of putting in new and additional ties, drainage, etc. The real work of reconstruction of the line will be begun next spring. (Oct., pg. 550.)

Esquimalt & Nanaimo Ry.—A press report states that the Victoria, B.C., City Council is about to call for tenders for the construction of the substructure of the Johnson St. bridge. F. M. Preston, City Engineer, returned to Victoria, Oct. 5, from Montreal, where he had been in consultation with C.P.R. engineers in connection with the plans. Some alterations in the original plans were agreed upon, and as soon as the details of these have been worked out tenders will be invited. (Oct., pg. 550.)

The Flinlon Mining District.—A number of members of the Manitoba Legislature were taken on a trip of inspection recently by the Northland Association over the mining belt in which the Flinlon mining proposition is situated. A railway to serve the district would probably start from near Pas, Man., and the probable route is west of Lake Athapuskow to the Flinlon mine, approximately 80 miles. It is estimated that this mine will produce copper ore in sufficient quantities to provide 2,000 tons a day for a smelter for 30 years. There are several propositions for a railway line under discussion, but the Northland Association and other interests favor the line being built by the Province of Manitoba. (June, pg. 297.)

The Great Northern Ry., in order to carry out its plans in Vancouver, B.C., has, through its British Columbia subsidiary, the Vancouver, Victoria & Eastern Ry. & Navigation Co., asked the City Council that certain streets and lanes intersecting its cut be closed and conveyed to it, and offers in exchange certain other properties for roadway purposes, and to build eight steel and wooden bridges over the cut. The proposition is being considered by a special committee. (July, pg. 386.)

Hudson Bay Ry.—A press report states that the repairs ordered by the Dominion Government to be carried out on the line between Pas and Kettle River Rapids, Man., have been completed.

Michigan Central Rd.—The Board of Railway Commissioners has approved of locations and plans for freight shed at Ridgeway, Ont., and joint passenger and freight station at Hagersville, Ont.

North Vancouver, Lillooet and Pemberton Meadows, B.C.—A press report states that the Mayor of North Vancouver, B.C., is advocating the construction of a line between North Vancouver and the Lillooet and Pemberton Meadow districts. North Vancouver is the starting point of the Pacific Great Eastern Ry., the section between North Vancouver and Squamish being uncompleted. The P. G. E. Ry. Co. took over the uncompleted line of the old Howe Sound, Pemberton & Northern Ry. and Lillooet is now a station at mile 111.5 on that line, while Pemberton Meadows village is about 7 miles from Pemberton, a station on the P.G.E.R., 57.7 miles from Squamish.

Pacific Great Eastern Ry.—A press report states that the operating department has taken over 68 miles of line between Lone Butte and Williams Lake, B.C., from the contractors, and has ex-

tended the regular train service thereon. It is also stated that track has been laid from Williams Lake to Deep Creek, 16 miles, and that a contractors' service is being given thereon.

The B.C. Government is reported to have sold to a Seattle firm \$1,000,000 of bonds at 100.73684, the proceeds of the issue to be used for construction on the railway. (Oct., pg. 550.)

Reid Newfoundland Co.—A press report states that work is to be started immediately on the construction of about three miles of line to connect the existing line with the proposed new terminal at Argentinia, in the Placentia Bay district, and that the terminal pier or breakwater at this point will be ready in Jan. 1921. (Oct., pg. 547.)

Toronto, Hamilton & Buffalo Ry.—Application was made to the Board of Railway Commissioners at Hamilton, Ont., Oct. 7, by the Toronto, Hamilton & Buffalo Ry. Co. for permission to change the alignment of its tracks on Hunter St., at the corner of John St., Hamilton. Judgment was reserved. (June, pg. 298.)

Ocean Services, Ltd., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

Guy Tombs, ex-Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., now Traffic Manager, Canadian Export Paper Co., Montreal, born near Lachute, Que., Nov. 22, 1877.

T. D. Utley, Car Foreman, C.P.R., Weyburn, Sask., born at Leytonstone, London, England, Nov. 1, 1890.

T. W. White, District Engineer, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., Nov. 29, 1880.

H. E. Whittenberger, General Manager, Western Lines, G.T.R., Detroit, Mich., born at Peru, Ind., Nov. 9, 1869.

W. A. Whyte, District Freight Agent, Canadian National Rys., Vancouver, B.C., born at Hornsey, Eng., Nov. 24, 1890.

Grand Trunk Railway Construction, Betterments, Etc.

Hamilton Bridge.—The Board of Railway Commissioners has authorized the rebuilding of the bridge carrying the company's tracks over the Hamilton Radial Electric Ry. at Birch Ave., Hamilton, Ont.

Stoney Creek Subway.—The Board of Railway Commissioners at Hamilton, Ont., Oct. 7, considered a complaint with reference to the subway under the G.T.R. tracks just west of Stoney Creek station, Ont. It was alleged that the subway is 17 ft. wide, and that the height from the surface of the road to the tracks is 10 ft. 3 in., and insufficient to meet traffic requirements, and that it is improperly drained. In addition to the question of the apportionment of the cost of any improvement of the subway, there are some engineering matters to be settled and the Commissioners suggested that the parties should endeavor to get together, and promised the assistance of the Commission's Chief Engineer, G. A. Mountain.

Woodstock Interlocking Plant.—A press report states that plans are under consideration for the installation of an interlocking plant at Woodstock, Ont., at an estimated cost of \$20,000.

London Track Elevation, Etc.—A press report states that the London City Council's level crossing committee expects to have a report ready for submission at an early date. The plans, it is stated, will involve the construction of subways at Rectory and Rideout Sts., both of which will be worked in with a general track elevation plan to be taken up at a future date.

Another press report states that the London City Council has been advised that the Board of Railway Commissioners has decided that in the event of the city engaging with the G.T.R. in track elevation or the building of subways, the city's share of the expense should be only 25% and the railway should pay 75% of the total cost.

Port Huron Shop Extensions.—A U.S. press report states that plans for extensive improvements to the car and locomotive shops at Port Huron, Mich., are under consideration. (Oct., pg. 550.)

The Railway Y.M.C.A. at Bridgeburg, Ont., was badly damaged by fire, on Oct. 13.

Birthdays of Transportation Men in November.

Many happy returns of the day to—
J. O. Adams, General Eastern Freight Agent, Canadian National-Grand Trunk Rys., New York, born at London, Ont., Nov. 21, 1872.

G. H. Shaw, ex-General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Canadian Pacific

Orders by Board of Railway Commissioners for Canada.

30.008. Sept. 14. Authorizing Canadian National Ry., pending further order, to remove agent at Peniston Falls, Ont., on condition that certificate be surrendered.

30.009. Sept. 14. Ordering C.P.R. to cut down high ground in each direction to not more than 4 ft. above roadway level at crossing of side road between Lots 5 and 6, Con. 10, Morris Tp., Ont., Guelphish Branch.

30.008. Sept. 14. Authorizing Halifax & South Western Ry. (C.N.R.) to fill in Dutch Village trestle, mile 4 Chester Subdivision, Bridgewater Division, N.S.

30.009. Sept. 9. Authorizing C.P.R. to build new passenger car, Carleton Place, Montreal, for Barrett Co.

30.010. Sept. 10. Authorizing Kettle Valley Ry. to build its Peniston to International Boundary branch at grade across Peniston-Fairview highway at mile 10.

30.011. Sept. 10. Authorizing C.P.R. to divert road allowance on east boundary of n. w. 1/4 Sec. 22, Tp. 13, Range 7, at mile 36, Reston Subdivision, Sask.

30.012. Sept. 9. Authorizing Union School Section 22, Brantford, and 7, Onondaga, Ont., to build ditch along west side of school section crossing Brantford & Hamilton Ry. ditch with ditch along the Stone Road, Brantford Tp., Ont.

30.013. Sept. 9. Authorizing Nelson Tp., Ont., to lay highway crossing over Toronto & Niagara Power Co.'s right of way, and Hamilton Rural Electric Ry. in Lot 12, Con. 3, south of Dundas St.

30.014. Sept. 10. Authorizing C.P.R. to divert road allowance on south boundary of n. w. 1/4 Sec. 25, Tp. 14, Range 8, west 2nd meridian, at mile 101, Reston Subdivision, and to close diverted portion within limits of its right of way.

30.015. Sept. 11. Amending Order 29,975, Aug. 12, re rebuilding of Grand River Br., bridge 4, over Spring Creek, Preston Jet., Ont.

30.016. Sept. 10. Authorizing G.T.R. to lay 10 in. water main across Montreal Park & Island Ry. right of way between Turcot & Turcot.

30.017. Sept. 13. Ordering that no further protection be required at crossing of Westchester Ave., 14 miles from St. Catharines, Ont., so long as G.T.R. and Ontario & Toronto Ry. maintain speed limitation of 10 miles on hour over same.

30.018. Sept. 14. Approving plan, profile and bed of reference showing revised location of Canadian Northern Ry. through fractional, n. w. 1/4 Sec. 4, Tp. 19; n. w. 1/4 Sec. 32, Tp. 18, Range 14, west 6th meridian, and D.L. 422, Group 1, Kamloops Division, Valley District, H.C., and re-building of Grand River Br., bridge 4, over Spring Creek, Preston Jet., Ont.

30.019. Sept. 10. Rescinding order 21,707, Apr. 26, 1914, re Canadian Northern Ry. spur for Lake Winnipeg Shipping Co. at Woodbury, Man.

30.020. Sept. 15. Ordering C.P.R. to pay \$600 to M. M. M. Co. for damages to his property caused by exercise of powers under no. 29,897, re highway obstructions near Niagara Falls, Ont.

30.021. Sept. 15. Ordering C.P.R. to build highway to spur for Toronto Car & Mfg. Co., Parkdale, Ont.

30.022. Sept. 15. Authorizing C.P.R. to build standard 2 station at Hurstman, Man. by Aug. 1, 1921, and pending erection to provide by Oct. 1, 1921, room and protection for passenger freight cars crossing and from goods freight shed or by furnishing additional accommodations.

30.108. Sept. 14. Dismissing application of Moose Jaw rural municipality 161, Sask., for order directing C.P.R. to provide crossing at Seventh Ave. and Moose Jaw.

30.104. Sept. 16. Extending for three months time within which C.P.R. spurs for Jenkins Canadian Co., Drummond, Ont., may be built.

30.105. Sept. 15. Ordering Grand Trunk Pacific Ry. to extend station platform at Telkwa, B.C., not less than 150 ft., by Oct. 31.

30.106. Sept. 17. Extending to July 31, 1921, time within which interlocking plant at crossing of C.P.R. and G.T.R., Kingston, Ont., may be installed.

30.107. Sept. 17. Approving new location of G.T.R. station at Long Branch, Ont.

30.108. Sept. 16. Authorizing C.P.R. to build extension of spur for North Star Oil & Refining Co., St. Boniface, Man.

30.109. Sept. 17. Approving route map of general location of Canadian National Ry. Borden Northern Branch, mile 0 to 51.6, Sask.

30.110. Sept. 17. Relieving G.T.R. from providing further protection at crossing west of Greenwood, Ont.

30.111. Sept. 17. Authorizing Grand River Ry. to make alterations in its line as built in North Dumfries Tp. and Galt, Ont., to build new station immediately south of Galt, to take certain G.T.R. lands; to lay track under C.P.R.; to cross G.T.R., south of Dundas Road; to install diamond at crossing of G.T.R., protecting same with interlocking plant, demarcation and distant signals, etc.; to connect with C.P.R., and to cross at grade, Hespeler Road, Samuelson and Beverly St., Dundas and Waterloo Road, Kerr and Main St., Grantham Ave., Rollo and Bond St., Galt, and portion of Dundas and Waterloo Road, and Hespeler Road, North Dumfries Tps., Ont.

30.112. Sept. 18. Authorizing C.P.R. to divert road allowance on west boundary of s. w. 1/4 Sec. 5, Tp. 2, Range 9, west 6th meridian, and to carry same at grade across its tracks at mile 107.8, La Riviere Subdivision, and to close diverted portion within right of way limits.

30.113. Sept. 20. Authorizing C.P.R. to re-build bridge 81.5 over Little Pic River, Heron Bay Subdivision, Algoma District, Ont.

30.114. Sept. 20. Authorizing C.P.R. to build spur across Leonard St., Quebec, Que., for Quebec Preserving Co.

30.115. Sept. 20. Authorizing C.P.R. to divert road allowance on north boundary of n. e. 1/4 Sec. 22, Tp. 13, Range 25, west principal meridian, at mile 164.1, Minota Subdivision, and to close diverted portion within right of way limits.

30.116. Sept. 20. Extending to Oct. 31, the time within which work shall be done by G.T.R. at Garrison Road crossing, Bertie Tp., Ont.

30.117. Sept. 20. Dismissing application of residents of Jasmin, Sask., for order requiring Grand Trunk Pacific Ry. to appoint station agent there, and ordering G.T.R. to appoint grain and freight agent at Jasmin, October, November and December each year until otherwise ordered.

30.118. Sept. 21. Dismissing application of United Farmers of Manitoba, Reaburn Branch, to require C.P.R. to remove agent at Reaburn, Man., and ordering C.P.R. to appoint caretaker there.

30.119, 30.120. Sept. 22. Approving revised location of Canadian Northern Pacific Ry. Okanagan Subdivision, from mile 0 to 65, south of Kamloops Junction, and from mile 11.5 to 14.3 south from Vernon, B.C.

30.121. Sept. 22. Approving revised location of Canadian National Ry. through Victoria Park, Humboldt, Sask., mile 0 to 3.62, and authorizing crossing of Limerick St., 2nd, 3rd and 4th Aves. Maclean St. and 5th Ave.

30.122. Sept. 21. Approving agreement, Sept. 3, between C.P.R. and Peerless Telephone Co., Oxford County, Ont.

30.123. Sept. 22. Authorizing C.P.R. to build extension of spur for Canadian Oil Companies, Weyburn, Sask.

30.124. Sept. 22. Approving location and plan of Michigan Central Rd. freight shed at Ridgeway, Ont.

30.125. Sept. 21. Authorizing Ontario Lands and Forests Department to make highway crossing over G.T.R. on Lot 18, Con. 11, Chaffey Tp., Muskoka District.

30.126. Sept. 21. Authorizing Mariposa rural municipality 161, Sask., to make highway crossing over C.P.R. between Secs. 29 and 32, Tp. 35, Range 21, west 3rd meridian.

30.127. Sept. 21. Authorizing Canadian National Ry. to remove and rebuild crossing and diversion in n. w. 1/4 Sec. 6, Range 1, west 2nd meridian, Alta.

30.128. Sept. 21. Approving Boston & Maine Ry. bylaw, Aug. 3, authorizing G. C. H. Easton, J. R. MacAnanny and F. A. Horter, or any of them, to establish or change rules, regulations, rates, fares, tolls, etc., within Canada and to publish and amend schedules, and resending orders 14,244 and 24,194.

30.129. Sept. 28. Extending 30 days time within which G.T.R. may do work required under order 29,710 re removal of trees at West Hill

Ont.

30.130. Sept. 27. Approving plan showing proposed replacement of detector bars by electric interlocking at crossing of G.T.R. and Westland Canal drawbridge, Toronto, Hamilton & Buffalo Ry. connecting crossing of Michigan Central Rd. by Niagara, St. Catharines & Toronto Ry. at Westland, Ont.

30.131. Sept. 28. Approving Grand Trunk Pacific Ry. clearance at second conveyor and planing mill, for Gliscome Lumber Co., Gliscome, B.C.

30.132. Sept. 28. Ordering C.P.R. to install gates at crossings of Fall Mill and Waterloo Sts., London, Ont., by June 1, 1921.

30.133. Sept. 28. Ordering C.P.R. to build transfer track with Canadian National Ry. at Conquest, Sask., by Nov. 1.

30.134. Sept. 28. Authorizing C.P.R. to make changes to sidings for Corrugated Paper Box Co., Toronto.

30.135. Sept. 24. Relieving Esquimaux & Nanaimo Ry. from providing further protection at crossing at mile 76.57, about 1,953 ft. north of Wellington south bound, Vancouver Island, B.C.

30.136. Sept. 24. Relieving G.T.R. from providing further protection at first crossing east of Pottersburg, Ont.

30.137. Sept. 24. Authorizing railways until further order, to issue free transportation to one class of 3 inspectors of live stock cars and yards of Dominion Department of Agriculture.

30.138. Sept. 24. Approving agreement between Bell Telephone Co. and Bromley Telephone Association, Renfrew County, Ont., and rescinding order 26,029.

30.139. Sept. 25. Rescinding order of the Railway Committee of the Privy Council, Nov. 22, 1892, respecting crossing of Wingham St., Ingersoll, Ont., by G.T.R.

30.140. Sept. 27. Authorizing C.P.R. to build spur for Northwest Grain Dealers Association, St. Boniface, Man.

30.141. Sept. 28. Authorizing Canadian Northern Pacific Ry. to cross Aberdeen Road at mile 2, Lumby Branch, on its Vernon-Lumby extension, B.C.

other Canadian ports engaged in this traffic.

30.191. Oct. 6.—Authorizing G.T.R. to operate over siding serving Feldspar Milling Co., Toronto.

30.192. Oct. 6.—Amending order 30,114, Sept. 20, re Canadian National Rys. spur for Quebec Preserving Co., Quebec.

30.193. Oct. 7.—Authorizing Canadian Northern Quebec Ry. to cross and divert highway at mile 101.3 from Montreal, in St. Barnabe Parish, Que.

30.194. Oct. 7.—Authorizing G.T.R. to build three spurs for Dominion Sugar Co., Kitchener, Ont.

30.195. Oct. 7.—Relieving C.P.R. from providing further protection at second crossing west of Sand Point, Ont.

30.196. Oct. 7.—Authorizing Canadian Northern Quebec Ry. to cross and divert highway between St. Sever and St. Barnabe Parishes, Que., mile 102.34 from Montreal.

30.197. 30.198. Oct. 6.—Approving revision of Canadian Northern Pacific Ry. Okanagan Branch mile 21.4 to 24.8, Vernon to Kelowna, on Duck Lake Indian Reserve No. 7, and mile 27.1 to 29.2, Vernon-Kelowna section of its Kamloops-Kelowna Branch, B.C.

30.199. Oct. 6.—Authorizing Canadian Northern Ontario Ry. to open for traffic its branch line from its yard at Cartierville, Que., to the village, 0.845 mile.

30.200. Oct. 9.—Authorizing C.P.R. and Sherbrooke Ry. & Power Co. to operate over crossing at Alexander St., Sherbrooke, Que., without first stopping trains.

30.201. Oct. 9.—Authorizing C.P.R. to rebuild bridge 2.33 over Duchesnay Creek, on its Cartier Subdivision, Ont.

30.202. Oct. 6.—Authorizing G.T.R. to close station at Asta, Que.

30.203. Oct. 9.—Authorizing Kettle Valley Ry. to open for traffic its line from Copper Mountain to a junction with Vancouver, Victoria & Eastern Rys. (G.N.R.) at Princeton, B.C., mile 0 to 13.

30.204. Oct. 9.—Approving Canadian National Rys. bylaw authorizing W. Hateley, Assistant General Freight Agent, to issue tariffs of 1 mile 12,312, Jan. 18 and Sept. 8, 1910, re G.N.R. train service between Guichen and Colebrook, B.C.

30.206. Oct. 11.—Dismissing complaint of White & Co., Hamilton, Ont., against a demurrage charge under rule 5 of Canadian Car Demurrage rules on two cars of potatoes delayed in loading at Utopia, Ont.

30.207. Oct. 11.—Authorizing C.P.R. to rebuild bridge 1.88 over Echo Lake, Thessalon Subdivision, Algoma District, Ont.

30.208. Oct. 11.—Authorizing G.T.R. to rebuild overhead bridge K.E. 43.64 crossing McNab St., Hamilton, Ont., over its tracks.

30.209. Oct. 11.—Amending order 30,189, Oct. 5, re Canadian National Rys. stopping trains 5 and 6 at Richmond, Ont., by striking out the words "on flare."

30.210. Oct. 12.—Ordering Grand Trunk Pacific Ry. to enlarge station and waiting room, install team track and cut away bank west of station at Hazelton, B.C.

30.211. Oct. 12.—Amending order 30,115, Sept. 20, re C.P.R. diversion of road allowance in n.e. ¼ Sec. 22, T. 13, Range 22, west principal meridian, mile 16.04 Miniota Subdivision, Man.

30.212. Oct. 12.—Approving location of portion of C.P.R. Moose Jaw Southwesterly Branch, Assiniboine to Consul, mile 57.5 to 65.22, and authorizing crossing of certain highways.

30.213. Oct. 13.—Ordering Atlantic Quebec & Western Ry. to make ditch along center of P. Tenny's land, Little Pabos, Que., 18 in. deep and 2 ft. wide from culvert under track to water course along his property.

30.214. Oct. 13.—Appending for two months time for installation of automatic bell at C.P.R. crossing about a mile north of Guelph, Ont.

30.215. Oct. 13.—Authorizing Saskatchewan Highways Department to build highway crossing in n.w. ¼ Sec. 24, T. 36, Range 8, west 3rd meridian.

30.216. Oct. 12.—Approving agreement between Bell Telephone Co. and Ennisville, Ont.

30.217. 30.219. Oct. 15.—Extending for two months time within which St. Thomas Municipal Ry. may operate its one-man operated cars over the Leamington, St. Stanley Ry. on Elm, Wellington and Talbot Sts., St. Thomas, Ont.

30.221. Oct. 14.—Authorizing C.P.R. to build two spurs for Dominion Construction Co., Ltd., and Ramsay, at mile 109.5, Winchester Subdivision, Ont.

30.222. Oct. 14.—Approving revised route map of general location of Interprovincial & James Bay Ry. (C.P.R.) from terminus of this Quebec line at mile 10, to mile 70, near Riviere des Quins, Ont.

30.223. Oct. 15.—Authorizing C.P.R. to use bridge 8.1 over Assiniboine River, at St. James, Man.

30.224. Oct. 15.—Authorizing C.P.R. to rebuild bridges 24.0 and 24.1, over Mississippi River, at Almonte, Ont.

30.225. Oct. 15.—Ordering Grand Trunk Pacific Ry. to trade to the level, a driveway along commercial track, about 14 ft. wide, suitable for wagon traffic and low enough so that 3 cars at a time may be drawn alongside and loaded; a driveway across to be made thereon.

30.226. Oct. 14.—Authorizing C.P.R. to build five spurs for Kipawa Co., Gordon Creek, Ont.

30.227. Oct. 15.—Authorizing Canadian Northern Quebec Ry. to cross highway in lots 242 and 243, St. Ursule Parish, Que.

30.228. Oct. 15.—Amending order 28,071 to provide that Toronto Terminals Ry. Co. be authorized to lay its conduits containing pressure steam pipes across Bay, Yonge and Scott Sts., along and across Esplanade St., between point west of Yonge St. and point east of Scott St., Toronto.

30.229. Oct. 15.—Approving relocation of G. T.R. across Muskoka Road, David, James, First and Philip Sts., Gravenhurst, Ont.

30.230. Oct. 15.—Extending to Dec. 31, time within which C.P.R. may complete spur from Northwestern Milling & Export Co., Meosomin, Sask.

Quebec & Saguenay Railway taken over by Dominion Government.

The Quebec & Saguenay Ry., which extends from St. Joachim to Murray Bay, Que., 63 miles, has been taken over for operation as part of the Canadian National Rys. Construction of the line was started in 1911, but owing to financial difficulties work was suspended. After two or three years of negotiations, the Dominion Government in 1916 took power to acquire the line as a branch line for the Canadian Government Rys., the value to be settled by the Exchequer Court, the total price, however, not to exceed \$4,000,000. A contract was let to M. J. O'Brien and H. Doheny, who had been engaged in the construction of the line from the start, to complete the work, Gordon Grant being put in charge as Chief Engineer for the Government. After some delay the purchase price was fixed, and finally paid over, but while the line has been completed and has been operated for nearly two years by the contractors, it was only finally inspected and taken over for operation by the Canadian National Rys. Oct. 8.

Connection is obtained with Quebec over the Quebec Ry., Light & Power Co.'s line. Heretofore a service of three trains a week in each direction was provided, but the Canadian National Rys. is giving a daily train service in each direction.

The Q. & S. Ry. has been designated as the Murray Bay Subdivision, Saguenay Division, Quebec District, C.N.R., which is under the jurisdiction of J. E. Morazain, General Superintendent. The following district officers also have jurisdiction over the Murray Bay Subdivision: C. H. N. Connell, District Engineer; H. W. Sharpe, Master Mechanic; E. G. Theobald, District Car Foreman. The jurisdictions of the following Saguenay Division officers have been extended over the Murray Bay Subdivision:—R. Colclough, Superintendent; L. St. Oge, Assistant Superintendent; L. C. Dupuis, Division Engineer; J. C. Riddock, Bridge and Building Master; H. B. Cassidy, Roadmaster; J. L. Alain, Chief Dispatcher; J. M. Kerr, Assistant Master Mechanic.

Russian Railway Material at Coquitlam.—A Vancouver press report states that about 30,000 tons of railway material ordered by Russia, and lying in the C.P.R. yards at Coquitlam, B.C., is about to be sold by instruction of the British Government, on whose credit the orders were placed. When the Russian Imperial Government was overthrown, goods awaiting shipment were held up pending developments.

The C.P.R. Social and Athletic Club of Vancouver, B.C., is reported to have elected the following officers:—Honorary President, F. W. Peters; Honorary Vice Presidents, W. F. Salsbury, H. J. Camble, C. A. Catterell; President, J. I. Mackay; Vice President, J. T. Brooks; Secretary, A. E. Tennant; Treasurer, A. J. Calderhead.

Telegraph, Telephone and Cable Matters.

The British Radio Corporation of America Ltd. has been incorporated under the Dominion Companies Act, with \$10,000 authorized capital and office at Montreal, to manufacture and deal in wireless telegraph and telephone apparatus.

A London, Ont., press dispatch of Oct. 19 states that the Direct United States Cable Co.'s shareholders have accepted the British Government's offer of £570,000 for the company's cables and equipment. It is said that the shareholders will receive about \$6 a share.

The Manitoba Government telephones show a deficit on operation for the current year of about \$200,000 and the Premier is reported to have stated at Winnipeg, Oct. 15, that this was due to increased wages and operating expenses, and that an increase of rates will be necessary.

The British Columbia Forestry Department is reported to have placed a contract with the Canadian Marconi Co. for the erection of 4 land stations and 5 launch equipments for use in forestry fire protection work. It is stated that the central station at Vancouver, and the equipment of one of the boats, have already been completed.

The Great North Western Telegraph Co. has opened offices at Flamand, Que.; Colborne, Grafton, James Bay Jct., Thor Lake, Ont.; and Lucky Lake, Sask., and has closed its offices at Kiskisno Club House, Little Metis Beach, Manoir Richelieu (Pointe au Pic), and Pointe au Pic, Que.; Clifton House, Niagara Falls, Lake Joseph, Muskoka Lakes, Royal Muskoka Hotel and Sparrow Lake, Ont.; East Selkirk, Grand Beach, Scantbury and Victoria Beach, Man.; and Alberta Beach, Alta.

Amongst the interesting items of the war period, which are now being made public, is one relating to cable connections between Canada and Great Britain, reported recently by F. J. Brown, C.B.E., Assistant Secretary to the British Postmaster General, and one of the delegates at Washington, D.C., to consider the final allocation of the cables owned formerly by Germany. He is reported to have stated that the two cables formerly connecting Germany with the U.S., were cut by the British Navy, and diverted, one to France and the other to operate between Great Britain and Canada. The latter was cut about 30 miles from Penzance, on the southwest coast of England, and again in the Atlantic Ocean, about 600 miles from New York, the ends being connected to other cables, giving a direct cable between London, Eng., and Halifax, N.S. This cable was utilized entirely for Government business during the war, but is now open for general commercial business, and is being operated by the Imperial Cable Co. in conjunction with the C.P.R. Telegraphs.

United States Radio Stations are steadily growing in number. It is stated that the government shore radio stations number 135, of which 88 are in continental United States, 20 in Alaska, 19 in the Philippines, 3 in the Canal Zone, 2 in Hawaii, and one each in Porto Rico, Guam and Samoa. The government ship stations total 470.

Cable Construction.—Despite the great development of wireless telegraphy, submarine cables are still being constructed, and with the great increase in commercial and newspaper messages are still regarded as a necessary alternative to

wireless, and by no means obsolete or likely to fall into disuse. In fact, a new cable to the Far East from Great Britain through the Mediterranean, involving a length of 7,000 miles, is being laid section by section as ready, and the possibility of a new cable from Vancouver to Fanning Island is being discussed.

Britain's Wireless Chain.—The long-contemplated plan to connect all parts of the British Empire by wireless telegraph has received fresh impetus through the issue of a report of the committee appointed by the government to formulate such a scheme. The committee's report, which is unanimous, recommends that the Empire shall be linked up wirelessly by stages of about 2,000 miles each and that the system employed shall be that of the generation of radio-telegraphic energy by vacuum tubes. The scheme contemplates two main chains of wireless, one receiving dispatches from Africa, and the other from Asia and Australasia, both with Cairo as their first station. For the first link of the first chain a connection would be made on the Poulsen arc system between Oxford and Cairo, which the Post Office Department has nearly completed.

High Speed Wireless.—Manual operation is apparently doomed as far as long distance radio traffic is concerned. The ever increasing cost of high powered stations makes it necessary to handle a far greater volume of traffic than can be handled by the usual method. Thus some of the present transatlantic stations are operating at 50 to 100 words a minute by means of automatic transmitters and receivers. In England experiments have been going on for some time with automatic transmitters capable of a normal speed of 450 words a minute, and even 1,000 words a minute during demonstrations. The recording is effected by means of a special electro chemical apparatus, which consists of a specially prepared paper drawn between a roller and a marking pointer. The arrival of a signal causes a current to pass through the paper, producing discoloration.

France's Wireless Plans.—A dispatch from Paris states that the French Government has announced plans for an elaborate wireless system whose center will be in Paris and which will cover Europe, Asia, Africa and South America and connect with North America. If this system, part of which is already in existence, is in part of which is already in existence, is integrally applied as now proposed, France's wireless communications throughout the world will be able to rival with Great Britain's cable communications. According to the details made public at a recent meeting at Rennes, wireless communication was established with Hungary May 20, and will soon be opened with Belgrade. For commercial communication with the United States there is a station at Douai, near Lyons, in addition to the Lafayette station near Bordeaux. Between France and its colonies there will be stations with a range of 7,500 miles at Saigon and at Tahiti. Stations with a radius of at least 4,375 miles will be established at Djibouti, Antananarivo, Noumea, and French Guinea. In Africa the system will include stations at Saida and Bamako, which will take care of the traffic between Paris, Algeria and West Africa; another station in Senegal, near Dakar, and finally that of Brazzaville.

Among the Express Companies.

Among the many interesting incidents of the war, which can be contemplated with considerable pride by those who were concerned, some details of which have been made public, the transportation of bullion safely across both the Atlantic and Pacific Oceans, occupies a position of some prominence. V. G. R. Vickers, formerly in charge of the Money Order Department, Dominion Ex. Co., and now Vice President, The Holden Co., Montreal, is the authority for the information that during the war, \$700,000,000 in gold was received at Halifax, N.S., and on the Pacific coast \$262,000,000 of Russian gold was landed and shipped to Ottawa. The Russian shipments came in at different times, the smallest shipment being \$40,000,000 in gold bullion, while the largest was \$98,000,000, which took an all steel train of 13 cars to transport it from Vancouver to Ottawa. These shipments were usually taken from Japanese warships at sea by H.M.C.S. Rainbow, which put to sea under sealed orders and steamed in various directions to deceive any enemy craft as to her possible destination or object, then she made for some small cove on the coast, as remote from shipping as possible, and uninhabited for preference, where the bullion ship would be met. The ships would warp alongside each other, and the cases would be transferred through chutes slung between the ships. All this work was done under the supervision of Dominion Government and Dominion Ex. Co.'s officials. The Rainbow would then proceed to Vancouver by devious routes and get alongside the C.P.R. wharf in darkness, and transfer her cargo to a waiting train. These trains were amply guarded by long service Dominion Ex. Co.'s men and C.P.R. special police, heavily armed, and the train was equipped with telephone communication throughout. On one occasion after the enemy menace on the Pacific coast had been reduced to a practical nullity, the transfer of bullion took place in Esquimalt harbor, and at another time, two Japanese warships steamed into Vancouver in broad daylight, and the bullion was transferred to the train direct. At Halifax, bullion was received in the harbor direct from British cruisers, which ran alongside the Naval Dockyard piers, the cases being discharged into wagons under a guard of marines, who walked alongside the wagons to the waiting train at the south gate of the yard. No traffic was permitted near the bullion train, and guards were placed at every possible point. Some shipments were sent to New York, and others to Ottawa.

Canadian Express Co.

M. J. Dundas, general chairman of express employees of the Canadian Brotherhood of Railway Employees, announced in Ottawa, Oct. 19, that the Canadian Ex. Co. had been served with a notice by its employees asking for increased wages. It is stated that the employees are asking for the same proportionate raise as has been granted to railway employees.

Canadian National Express Co.

Offices have been opened at Orleans, Ont., Notre Dame des Lourdes, Libeau, Man.; the office at St. Proser, Que., has been abandoned and the agent transferred to St. Proser Jct., Que., and the following offices have been closed:—Norway Bay, Que., Lake Joseph and Balla Park, Ont., and Cardiff Jct., Alta.

Electric Railway Department

Proposed Purchase of Ottawa Electric Railway.

The Ottawa City Council had under consideration on Oct. 3 a recommendation from the Board of Control that the subject be added to the agenda of the municipal council on Jan. 1 on the question: "Are you in favor of the City applying for legislation enabling it to borrow money, without a further vote of the electors, to acquire the property and assets of the Ottawa Electric Ry. under the agreement between the City and the company, at a price to be fixed by arbitration, as provided for by the agreement. And in the event of the question being answered in the affirmative, that legislation be applied for conferring the necessary borrowing powers. The Board of Control further recommended that the council give it authority to obtain a valuation of the Ottawa Electric Ry. before the vote is taken.

After a lengthened discussion, the council decided not to adopt the recommendation of the board of control for an immediate valuation of the company's property, but agreed to the taking of a vote on the lines suggested, and adopted a suggestion of Alderman Ellis for taking a vote on the same day asking if the ratepayers are in favor of application being made for legislation to provide that the city will not be compelled to acquire the property and assets of the Ottawa Electric Ry., pursuant to the agreement between the city and the railway company, unless a bylaw setting out the amount of the arbitration award shall first be submitted to and receive the assent of the electors entitled to vote on money bylaws, or for such plebiscite as in the opinion of the city solicitor will carry out the intention of this motion.

The Ontario Legislature passed an act at its last session authorizing the Ottawa City Council to appoint a commission with the title of the Ottawa City Transportation Commission; such commission to be a body corporate, and to consist of three resident electors of Ottawa, appointed by the City Council upon the nomination of the Board of Control. The first appointment to the Commission shall be for one, two and three years respectively, so that annually thereafter one member shall be elected for the full term of three years. A member of the Commission is eligible for reappointment, but no member of the City Council may be appointed a commissioner. A bylaw may be passed providing for the payment of salaries to the commissioners.

Upon the acquisition by the city of the Ottawa Electric Ry. Co.'s property used in connection with the working thereof, under the terms of the agreement of June 28, 1893, the control and management thereof, and of all extensions of and additions thereto shall be vested in the Commission, which shall have all the powers conferred upon or exercisable by the City Council, except the power to borrow money upon debentures or by way of a charge upon the plant or property of the railway.

The Commission is given power to complete, alter, extend, maintain and operate a railway, tramway, and any other system of land transportation operated otherwise than by steam, in Ottawa and Hull, and in Gloucester and Nepean Tps., as may be authorized, but no rights shall

be exercised in the Province of Quebec until authorized by the Dominion Parliament or the Quebec Legislature. The Commission may buy rolling stock, plant and other equipment necessary for its lines; carry passengers and freight; appoint workmen, officers, etc.; and perform duties and enter into agreements with the same for periods of not exceeding three years at a time; provide a pension fund for its officers and employees; and make agreements with banks for temporary advances.

The Commission may regulate and fix the fares and tolls so that they will produce a sufficient revenue for the operation and maintenance of the railway, provide for renewals and replacements, and

obtaining the ratepayers' consent, but in the event of such bylaw not obtaining a two thirds vote, or in the event of the Council failing to vote a bylaw within six weeks of receiving the Commission's application, the Commission shall submit a question to the ratepayers whether such debentures should be issued, and should the electors assent thereto the Council shall, within a month thereafter pass the necessary bylaw.

The Council may, by bylaw, authorize the Commission to have charge of and supervision over the negotiations for acquiring the Ottawa Electric Ry. The Council is authorized to acquire the O.E. Ry. property outside the province of Ontario, but such agreement shall not be binding on the City unless, within three months, it shall have been approved by the Ontario Railway and Municipal Board. The Council is authorized to borrow money upon debentures, after obtaining the ratepayers assent, for the purpose of paying for the property taken over from the Ottawa Electric Ry., in Ottawa, and in the adjoining municipalities, together with the costs of the Council in the valuation proceedings. Provision is made for the payment of such price by the City's debentures, and the Commission may assume outstanding mortgages and liabilities of the company in connection with the purchase. The value of the lines outside Ottawa, situated in Ontario, is to be determined by a board of arbitration.

Electric Railway Connection with Toronto Island.

A press report states that the Dominion Minister of Public Works has advised the Mayor of Toronto that directions have been given to the Department's District Engineer at Toronto to report upon the advisability of building a tunnel under the western gap, Toronto harbor, so as to permit the passing of street cars from the city to Toronto Island, as a substitute for the proposed bascule bridge over the gap.

The Assistant City Engineer is credited with saying:—In view of the fact that it is proposed to dredge the channel for ocean going vessels, the tunnel would have to be considerably over 30 ft. below water level. It would depend upon the nature of the soil as to how deep the tunnelling would be. That under the bay, for the water supply, is 200 ft. deep at the island side. The approaches would have to be at least 1,000 ft., to give the proper grades at the two ends of the tunnel.

Winnipeg Electric Ry. Wages Payments.—For the first eight months of this year the gross earnings from operation of the Winnipeg Electric Ry. totalled \$3,406,068.76. Out of these receipts the company paid in wages and salaries to its employees (exclusive of managerial and office expenses), \$2,985,031.88. This means that 59.2% of the company's gross takings, or in other words, 59.2c. out of every dollar the company received from January to August, was paid out again to more than 1,300 workers in the company's employ.

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutchinson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gabor, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and P. D. Burpee, Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; R. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

for the payment of principal and interest of all outstanding debentures, encumbrances, fixed and floating liabilities. Should the revenue in any one year fall short of meeting these obligations, the Commission shall increase the fare for the ensuing year to such an extent as will wipe off the deficit and provide sufficient to meet the estimated expenditures for the ensuing year. In the event of the accounts of any year showing a surplus over all expenditures, it shall remain at the disposal of the Commission, to be expended by it for the purposes authorized by the act. The financial year is to end Oct. 31, and the Commission is to present report, with an audited statement of accounts, to the City Council on or before Dec. 15; and on or before Feb. 15 is to present to the Council an estimate of the revenues and expenditures for the then current year. The money necessary to pay principal and interest on debentures is to be paid over at due times by the Commission to the City Council. When debentures are required for the purposes of the Commission, the Council, by a two thirds vote may pass a bylaw to provide the same, without

Montreal Tramways Co's Annual Report, Etc.

Following are extracts from the report for the year ended June 30:—

Revenue:	
Allowance from contract	\$2,317,444.80
Other revenue	58,134.78
Gross revenue	\$2,375,579.58
Expenses:	
Interest on bonds	\$1,041,169.20
Interest on debentures	850,000.00
Other expenses	28,902.25
Total expenses	\$1,923,071.45
Net income	\$ 452,508.13
Less dividends of 2½% for quarters ended Dec. 31, 1919, Mar. 31, 1920, June 30, 1920	290,550.00
Surplus for the year	\$ 161,958.13
Add surplus at June 30, 1919	1,039,817.86
Total	\$1,201,775.99
From which has been appropriated for:	
Donation to Mrs. Robertson	\$ 5,000.00
Deferred dividends on common stock: 2½% for quarters ended June 30, Sept. 30, and Dec. 31, 1918	255,600.75
Total	260,600.75
General surplus	\$ 941,175.24

The gross revenue for the year was \$2,375,579.58, and the expenses \$1,923,071.45, leaving a net income of \$452,508.13, from which there have been declared three quarterly dividends of 2½% each, amounting to \$290,550.00, leaving a balance carried to the credit of the general surplus account of \$161,958.13, which added to \$1,039,817.86 at the credit of this account in 1919 makes a total of \$1,201,775.99, from which there has been appropriated \$260,600.75, of which \$255,600.75 was on account of deferred dividends paid during the year, and \$5,000 voted by your directors to the widow of one of the company's oldest and most valued officials, Donald S. Robertson, who died during the past year; leaving a balance at the credit of the general surplus account of \$941,175.24.

Your directors desire to point out that from the coming into force of the contract, viz., Feb. 10, 1918, to June 30, 1920, the revenue has not been sufficient to meet the requirements of the contract, the shortage being \$1,728,811.94, of which \$1,192,694.05 is payable to the City of Montreal, when received; and \$223,546.80, which should be placed to the credit of contingent reserve fund under the terms of the contract. The amounts to be received by the company from revenue for account of the City of Montreal of \$1,192,694.05, and for the contingent reserve fund of \$223,546.80, are only payable when the revenue received by the company, under the terms of the contract, is sufficient to pay these charges, after payment of all prior charges. These amounts have not been brought into the statement of assets and liabilities, but are shown on statement of operations under new contract.

Under the terms of the contract the company has to provide from its own funds a guarantee fund amounting to \$500,000, in amounts of not less than \$100,000 a year. Your directors beg to report that \$200,000 is on deposit with a trust company, in accordance with the provisions of the contract.

During the year the company resumed paying its usual quarterly dividends on its common stock at the rate of 2½% per quarter, starting from the quarter ended Dec. 31, 1919; and also paid the quarterly dividend in arrears for the quarters ended June 30, Sept. 30 and Dec. 31, 1918, leaving three quarterly divi-

dends still in arrears.

The employees submitted a demand for a general increase in wages, amounting to about \$3,500,000 a year, which the company declined to accept. The matter was referred to a board of conciliation, appointed under the Industrial Disputes Act of 1907, who unanimously agreed to grant them an increase of approximately \$800,000, which was accepted.

The Tramways Commission, after consideration of the operations of the past year, and after taking into consideration the requirements for the forthcoming year, decided on an increase in fares, effective Sept. 1, 1920.

The company commenced during the course of the year the construction of a modern sub-station at Cote St., and has placed orders for all the equipment thereof. It is hoped to have the same in operation during the coming year.

Statement of Operations under New Contract.

	Feb. 10, 1918 to June 30, 1919	Year ended June 30, 1920	Feb. 10, 1918 to June 30, 1920
Gross earnings	\$11,572,210.48	\$10,782,470.09	\$22,354,680.57
Operating expenses and taxes	6,640,715.22	5,849,911.89	12,490,627.11
Operating profit	45,927.82	46,606.63	92,534.50

Total	808,416.15	607,824.70	1,416,240.85
Deficit	\$1,364,111.74	\$364,700.20	\$1,728,811.94
*Surplus.			

The annual meeting was held Sept. 28. The directors and officers, who were re-elected, were as follows:—E. A. Robert, President; J. W. McConnell, Vice President; Hon. G. G. Foster, K.C., Vice President; W. C. Finley, P. J. McIntosh, W. G. Ross, J. M. McIntyre, Hon. J. M. Wilson and Hon. L. C. Webster. Lt. Col. J. E. Hutcheson is General Manager.

The Montreal Tramways Commission has also issued its report for the year ended June 30, stating it had 226 meetings during the year. Following are extracts from the report.

General Statistics.

Total tracks	264.60 miles
Tracks in operation	216.03 miles
Gross receipts per mile of total tracks	\$40,750.07
Gross receipts per mile of tracks in operation	43,825.83
Percentage of gross receipts devoted to operating expenses and taxes	74.68%
Percentage of gross receipts devoted to maintenance and renewals	20.32%
Percentage of gross receipts devoted to operating expenses	75.00%
Passengers, total number of	295,685,986
Revenue passengers	191,941,335
Transfers	63,744,151
Percentage of transfers to number of revenue passengers	33.21%
Gross receipts per passenger, total	4.22c
Gross receipts per revenue passenger	5.62c
Receipts per passenger (transportation of passengers only)	5.51c
Total operating expenses and taxes per revenue passenger	4.21c

In referring to the deficit on the year's operations, the Commission says:—"The contract has not foreseen the existence of deficits. In order to avoid an excessive rate of fare, the interested parties have agreed not to exact immediately

the payment of the amounts due them. The company's receipts must be applied in the following order to the payment of: 1. Operating expenses and taxes. 2. Maintenance and renewals fund. 3. Remuneration of capital value. 4. City rental. 5. Contingent reserve fund.

"At the end of the fiscal period of operation (Feb. 10, 1918, to June 30, 1919), the gross receipts could only meet the operating expenses and taxes, the maintenance and renewals expenses and a part of the remuneration on capital value (\$2,787,446.63, out of \$3,030,208.66). The accompanying statement shows that at the end of the past year the gross receipts were sufficient to pay not only the operating expenses and taxes and the maintenance and renewals fund, but the whole of the interest on capital value, also on addition to capital, and working capital as well as a part of the financing

expense (\$120,212.39 out of \$432,784.48). There is every indication that, at the end of this year, the situation will be further improved so that the City of Montreal will receive at least a portion on the \$500,000 annual rental."

Answers to Electric Railway Questions.

The following are among answers to question sent to the American Electric Railway Association's question box:—

Near or Far Side Stops.—Do you use the near side or far side stop or a combination of both? Is this required by ordinance or other legal measure? In view of the increase in vehicular traffic, which do you now recommend and what are your reasons for same?

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal: (1) Near side stop is used in general, though far side is used in a few instances, where stop is at the foot of a hill. Near side is much preferable in order to facilitate movement of crossing traffic. Law obliges vehicles to stop behind a standing street car, therefore in case of far side stop at congested corners vehicles behind car would block crossing traffic. In case of far side stop at heavy traffic cross streets car would have to make near side stop until crossing traffic had cleared. Near side stop tends to prevent accidents as car is under control ready to stop before reaching cross streets.

The Toronto Railway's Future Management.

The Toronto Transportation Commission, which is assuming control of the operation of the Toronto Ry. by the city in 1921, has appointed H. H. C. Harris, General Manager, Toronto Hydro Electric Commission, as General Manager, Toronto Transportation Commission, and has also made the following appointments:

J. M. Aldworth, formerly Assistant General Manager, and now acting General Manager, Toronto Hydro Electric Commission, is to be also acting Secretary, Toronto Transportation Commission.

J. S. Parry, formerly Assistant City Solicitor, to be Solicitor, Toronto Transportation Commission.

The Commission has also appointed R. C. Harris, City Commissioner of Works; E. L. Cousins, General Manager of the Harbor Commission; and F. A. Gaby, Chief Engineer of the Hydro Electric Board of Ontario, to a consulting capacity, with a view to co-ordinating the interests which they represent and obtaining the benefit of their advice on the problems with which they are familiar.

The Toronto Transportation Commission, which, as stated in Canadian Railway and Marine World for September, consists of P. W. Ellis, wholesale jeweller, President Toronto Hydro Electric Commission and Chairman Queen Victoria Niagara Falls Park Commission, as Chairman; Fred. Miller, of Roger Miller & Sons, railway and harbor contractors, Toronto; and Geo. Wright, hotel proprietor, who is a member of the Toronto Hydro Electric Commission, was appointed under the authority of an act passed at the Ontario Legislature's last session, authorizing the Toronto City Council to pass a bylaw establishing a Commission under the title of the Toronto Transportation Commission, which shall be a body corporate. The Commission is to be composed of three resident ratepayers of Toronto, who shall hold office for three years, and until their successors are appointed, and shall be eligible for reappointment. No member of the City Council is eligible to be appointed a member of the Commission. Appointments to the Commission are to be made by the City Council, on the nomination of the Board of Control, or by a two thirds vote of the Council in the absence of such nomination. The members of the Commission are to be paid such salary as may be fixed by bylaw.

Upon the City Council acquiring the Toronto Ry. under the terms of the agreement, schedule A, chap. 99, Ontario statutes of 55 Victoria, it shall by bylaw transfer the control, maintenance and operation of the same to the Commission, and the Council may, by other bylaws transfer to the Commission the control, maintenance and operation of the civic railway lines, or authorize it to construct and operate tube and subway lines, and operate lines of motor buses. It shall be the duty of the Commission to consider generally all matters relating to local transportation in Toronto, to construct such new lines of street railway, and to provide such plant, equipment and other facilities as it may consider necessary to be constructed or provided, or acquisition of the taking over by the City of the Toronto Ry.

The Commission will, in particular, not only be authorized to construct, but

also, and duties, have power to construct and operate new lines of street railway in addition to or in extension of existing lines; fix such tolls and fares so that its revenue shall be sufficient to make all transportation facilities under its control and management self sustaining, after providing for maintenance, renewals, depreciation and debt charges; and to make requisitions upon the City Council for all sums of money necessary to carry out its powers and duties. The Commission is to make an annual report to the City Council, and publish an audited balance sheet.

The City Council may pass bylaws, without submitting them to the ratepayers, to borrow money to acquire the Toronto Ry. under its agreement; to provide for such plant, equipment and other facilities as may be necessary to be provided in anticipation of the taking over of the railway, and to meet such other expenditures as may be necessary in making arrangements for the operation of the property when taken over; and to provide the Commission with money to construct new lines, and extensions of existing lines, to procure rolling stock, buildings, equipment, etc. The debentures issued for these purposes shall not be counted in ascertaining the limit of the city's borrowing powers for other purposes.

The London Street Railway Situation.

The London, Ont., City Council's special street railway committee is reported to have decided, after a conference with a number of representative men, to recommend to the city council to submit five questions to a vote of the ratepayers, as follows:

1. Cancellation of the London St. Ry. Co.'s franchise and purchase by the city at a price to be fixed by arbitration.
2. Purchase and operation on behalf of the city by the Hydro Electric Power Commission under hydro radial legislation.
3. Continuance of present ownership with operation by the Ontario Railway Board on a service at cost agreement.
4. Company ownership and operation, with a service at cost agreement.
5. Cancellation of the franchise, ejection of the company from the city streets and establishment of some other municipally owned transportation system, probably motor buses.

Further consideration was given to these questions by the committee on Sept. 29, and prior to the city council's meeting on Oct. 4, when the recommendations were to have come up, Sir Adam Beck is reported to have stated that a vote on the questions suggested would not settle anything, and further that he would not recommend, and the Legislature was not likely to pass, the legislation necessary to give the Hydro Electric Power Commission of Ontario authority to operate the railway for the people.

Suggestions are reported to have been made subsequently to have a vote taken, on Jan. 1, as to the purchase of the railway, but up to the time of writing nothing had been settled.

A press report states that owing to the fact that no arrangement has been made between the London City Council and the London St. Ry. as to the various matters about which they differ, a B

Ingram, Vice Chairman of the Ontario Railway and Municipal Board, having charge of the operation of the railway, has indicated that the Board does not intend to go on indefinitely with the management, and may relinquish control.

Employees of the London St. Ry. are, it is reported, taking steps to enforce a demand for an increase of wages from 48c to 52c. an hour; and a press report of Oct. 13 stated that the city council's finance committee, has asked the Ontario Railway and Municipal Board to forego payment of bond redemption charges, so that increased wages may be paid.

Increases in Electric Railway Passenger Fares.

British Columbia Electric Ry. — The Victoria, B.C., City Council on Oct. 4 agreed to allow the company to increase its fare on city lines from 5c. to 6c., with six tickets for 35c., and school children's tickets 3c. each, all fares to carry transfer privileges. The company had asked for a 7c. fare, but A. T. Goward, Local Manager, wrote, stating that the increase to that amount would not be pressed and that the company's final offer was a 6c. fare with tickets, etc., as stated above. Heretofore the fare has been 5c. straight, with no transfer privileges or reduced rates for school children. The council also agreed to take steps to eliminate jitney competition. The company is to take over the maintenance of certain portions of the streets. The final details of the agreement are now worked out, and it is not anticipated that there will be much delay in putting the new rates into effect.

Hull Electric Co.—A letter from G. Gordon Gale, Vice President, Hull Electric Co., is reported to have been read at a meeting of the Hull, Que., City Council, Oct. 4, asking that the present agreement governing street car fares which has some years to run yet, be set aside and new rates based on the present cost of operation be made effective. In the letter Mr. Gale claims that since the agreement with the city was made about 26 years ago, an uninterrupted street car service has been provided. He also states that the same fares as charged in 1896 are still being charged, that in the meantime the wages of employees have increased 300%, and that the cost of materials for car repairs, track renewals, and repairs to pavements have increased in like manner, and further that during this long period, the company has been unable to make a profit.

Saskatoon Municipal Ry.—Cash fares on the Saskatoon, Sask. Municipal Ry. were advanced on Oct. 1 from 7c. to 10c., and unlimited tickets are now sold at 4 tickets for 25c., instead of 6 for 35c. No change has been made in school children's tickets. Following is a comparison of the old and new rates:—

	Now	Old
Cash	10c.	7c.
Unlimited tickets	4 for 25c.	6 for 35c.
School children's tickets	3 for 20c.	4 for 25c.

Sudbury-Copper Cliff Suburban Electric Ry.—A press report states that, on Oct. 1, the company put in operation a 5c. increase on the return fare between Sudbury and Copper Cliff, Ont., the new fare being 30c.

Winnipeg Electric Ry.—The Winnipeg City Council on Oct. 11 made an interim appropriation of \$5,000 to carry on an appeal against the Manitoba Public Utilities Commissioner's order of Aug. 23 authorizing an increase of fares on the W. E. R., which went into effect Sept. 1.

Why Winnipeg Electric Railway Asked Abolition of Workmen's Tickets.

The Winnipeg Electric Ry. has published the following statement in reference to the recent abolition of workmen's tickets:—"When we applied to the Manitoba Public Utilities Commission to readjust fares, we asked the Commission to abolish workmen's tickets for the following, among other reasons:—

"To relieve rush hour peak traffic. We found that because red tickets were cheaper than ordinary tickets, shoppers waited until red ticket hours to travel. The shopper load, coupled with the other rush hour traffic, accentuated the peak. It is well known that in order to take care of this peak traffic we have to maintain extra crews, and these extra crews had to be paid standby time; so we found ourselves in the position of giving a more expensive service in the rush hours and getting less for it.

"Sunday car service costs more than week day service. The reason for this is that we have to pay our motormen and conductors 5c. an hour more for the time they work on Sundays than on week days. It surely is not sound business to sell service on Sundays at a lower rate than we sell it for on week days, when it actually costs us more to supply it on Sundays than on week days.

"There was no justification for discrimination. Red tickets meant cheaper fares for those workers who happened to finish work earlier than another set of workers. Probably, when the street cars started operating in 1892 the laboring man received \$1 a day. These workmen's tickets were designed to be used by the workers travelling to and from their work. But the \$1 a day man is no longer with us, and we are all workers now. There is no justification for any particular class in the community being permitted to buy its street railway transportation at a lower rate than any other class. Some one has to pay for the service, and our contention is that the man who uses the cars should pay a fair price for the service he receives, and no one should get any special consideration."

Electric Railway Employees' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—Some time ago the employees applied for an increase in wages, the conductors and motormen asking for an increase from the existing rate of 60c. an hour to 75c. A press report of Oct. 5 stated that the company had offered increases varying from 1c. to 8½c. an hour, according to the class of work engaged in. The company's offer was laid before the employees at Vancouver, New Westminster and Victoria, and the men voted to accept it. The report states that the new rates, as compared with the old rates are as follows:—

	Per hour.	New.	Old.
City motormen and conductors	65c.	60c.	
Interurban motormen and conductors	67c.	62c.	
Car repairs	70c.	62c.	
Mechanics' helpers	65c.	62c.	
Car cleaners	58c.	55c.	
Carpenters	77c.	69c.	
Blacksmiths and machinists	80c.	71c.	
Trackmen	60c.	55c.	

The Sherbrooke Ry. & Power Co. has bought 2 safety one-man operated cars, and is in the market for another 2 of the same, or similar, type.

Mainly About Electric Railway People.

E. H. Bronson, who died at Ottawa, Ont., Oct. 19, aged 76, after a long illness, was a director of the Ottawa Electric Ry. Co.

Henry Herbert Couzens, A.M.I.E.E., who has been appointed General Manager, Toronto Transportation Commission, was born at Totnes, Devonshire, Eng., Oct. 16, 1877, and was educated at the Independent College (Taunton School), Taunton, Eng. He subsequently served as an articulated pupil in both mechanical and electrical engineering, with Allen & Sons, Taunton, and the Taunton Corporation Electrical Works respectively, and in 1898 was appointed Assistant Engineer, Bristol Corporation Electrical Department, Bristol, Eng., and held that position until 1901, when he was appointed Deputy City Electrical Engineer, Bristol. He resigned in 1909 on his appointment as Manager and Engineer, West

H. H. Couzens.
General Manager, Toronto Transportation Commission.

Ham (London, Eng.) Corporation Electric Supply, and in 1912 was appointed to a similar position with the Hampstead Borough (London, Eng.) Council, and continued for a year as Consulting Engineer for West Ham. He resigned that position at the end of 1912, on his appointment as General Manager, Toronto Hydro Electric System, and took up the duties of the latter position early in 1913. He has been given an indefinite leave of absence pending the full organization of the Transportation Commission, after which, it is said, that he will act as General Manager of the combined systems.

A. H. Dion, Manager, Moose Jaw Electric Ry., Moose Jaw, Sask., is contemplating resigning to engage in commercial work.

W. Marrigan, member of the Public Utilities Commission, Port Arthur, Ont., who died there, Oct. 18, aged 60, was formerly a railway and general contrac-

tor, and carried out several subcontracts on the Intercolonial Ry., New Brunswick Ry., Bangor & Aroostook Rd., Baie des Chaleurs Ry., Soulanges and Welland canals and Port Colborne breakwater.

Fred. R. Miller, who has been appointed one of the members of the Transportation Commission, which has charge of the preparation for the taking over of the Toronto Railway by the city, and which will be in charge after this is accomplished, was born at St. Catharines, Ont., Oct. 31, 1878. He was educated at Ingersoll, Ont., and the Applied Science Faculty, Toronto University, graduating in civil engineering in 1898. He was subsequently associated with Haney & Miller, general contractors, Toronto, and from 1902 to 1909 was engaged in the construction of the waterworks tunnel under Toronto Bay, the Montreal Locomotive Co.'s plant at Montreal, the breakwater at Port Stanley, Ont., and other works. In 1909 he joined the firm of Roger Miller & Son Ltd., and was elected Vice President in 1917. In 1916 he took charge of the production of munitions under the Imperial Munitions Board in Toronto district, and until the winding up of that company was Vice President and General Manager of British Forgings Ltd., Toronto.

G. Pettingill, formerly Superintendent, Winnipeg, Selkirk & Lake Winnipeg Ry., a subsidiary of the Winnipeg Electric Ry., has resigned, and the position is being filled temporarily by L. E. McCall.

P. Pocock, Vice Chairman, London, Ont., Railway Commission, is spending some months in Europe.

Miss Eleanor A. Soper, daughter of Warren Y. Soper, Vice President, Ottawa Electric Ry., Ottawa, was married at Ottawa, Oct. 9 to A. C. Bethune.

John F. Zebley, a Boston, Mass., banker, who is reported to have died suddenly there recently, is said to have financed the construction of the St. John, N.B., Ry., the contractor being his brother, H. B. Zebley, of New York. The first cars were operated Oct. 17, 1887. A prior street car line from Indiantown to Market Square, St. John, was built in 1869, but was abandoned after a few years operation.

The Toronto Ry. city percentage case was before the High Court at Toronto, during October, on the company's application for a declaratory judgment that the unpaid percentage payments due to the city by the company as provided for in the franchise agreement, constitute a lien on the company's assets in priority to the claims of the bondholders. Mr. Justice Orde, in delivering judgment, Oct. 22, stated that he was unable to see what rights of the company were affected, the matter being one as between the city and the bondholders, who had expressed no desire to have the question determined, and therefore dismissed the motion with costs.

Winnipeg Electric Ry. Expenditures, Etc.—The Winnipeg Electric Ry. states that it has disbursed among its employees during the past 4½ years \$8,700,000; that the number of people in the city which it supports aggregates about 5,000; that during the past 4½ years it has purchased goods and material from local business houses which represent \$5,400,000; that it is one of the biggest individual employers of labor in the city.

Electric Railway Projects, Construction, Betterments, Etc.

Calgary Municipal Ry.—The new incineration for Fourth Ave. and Centre St. has been delivered to Calgary, Alta., and is being assembled. When the work is completed the remaining of incinerators will be constructed, thereby obviating the necessity of the service. (Oct., pg. 561.)

Grand River Ry.—The Board of Railway Commissioners has authorized the company to make deviations, changes, repairs, etc., on the line in North Dumfries Tp., and in Galt, Ont.; to build a station immediately south of Main St., Galt; to cross certain G.T.R. tracks, and to build under the C.P.R.; to cross the G.T.R. south of Dundas Road, and to install diamond with interlocking plant, derails, home and distant signals, etc.; to connect with the C.P.R. and cross at grade 10 streets or roads in Galt, and three roads in North Dumfries Tp. The Board has also authorized the company to build an additional track (double track) across Speedwell and Breslau Roads, Waterloo Tp., Ont. (Oct., pg. 561.)

Hydro Electric Power Commission of Ontario.—A press report states that the Commission has filed plans of its projected electric railway lines through the City of Hamilton, and the County of Wentworth. The plans, it is stated, provide for a terminal station on James St., Hamilton, near Stuart St. Hamilton city officials are reported to have said that the filing of the plans was necessary to conform with the Railway Act, in order that they may be examined by interested parties, and objected to if necessary. The plans filed, so far as they affect Hamilton, will be examined by the City Council's railway committee.

Hydro Electric Ry., Essex Division.—We are officially advised that the work in progress on this railway consists of the replacement of the existing single track line extending from Ouellette Ave., along London St., Windsor, Ont., to the Michigan Central Rd., a little over one mile. The work has been undertaken to facilitate operating conditions, and it is expected to have it completed during this year.

A press report states in order to provide funds for the extensions of the street railway system in Windsor and adjacent municipalities, the Hydro Electric Power Commission of Ontario will ask authority to sell another block of debentures, and that when the Ontario Government has taken the necessary action, the municipality may then submit the plan to the people. (Oct., pg. 561.)

London & Port Stanley Ry.—The Board of Railway Commissioners has under consideration an application for authority to build a second track across Bridge St., Port Stanley, Ont. (Oct., pg. 561.)

New Brunswick Power Co.—The St. John, N.B., City Council has been asked to have the company's car tracks removed from Queen St. West. It was stated that the laying of the tracks in this area had been opposed by the residents, and that the city had finally given its approval for the laying of the tracks for three years. This period has expired, and it is desired to have the tracks removed. An alternative route for the tracks was suggested and the applicants were asked to submit their desires in writing in order that the city officials could take up the matter with the company.

Port Burwell, Aylmer and London, Ont. A press report states that the project, discussed at length some years ago for the construction of an electric railway from Port Burwell, on Lake Erie, via Aylmer to London, is again being agitated.

Quebec Ry., Light & Power Co.—Work is reported to have been started on the construction of the extensions on St. Valier St., and in Belvedere Ward, Quebec. It is expected that they will be completed by the end of November. (Oct., pg. 561.)

Sarnia St. Ry.—A press report states that public support is being given to a suggestion that this railway be extended to Corunna, Ont.

Saskatoon Municipal Ry.—We are officially advised that there is now being built about 3,000 ft. of double track on existing lines in Saskatoon, Sask. A contract has been given L. S. Masterson, Pas, Man., for 5,000 track ties, and another contract has been given C. S. Sutherland, Edmonton, Alta., for 65 gross tons of 56 lb. relaying rails with angle bars, bolts, etc. (Sept., pg. 503.)

Tobique to Bathurst, N.B.—A press report states that a proposition is being considered for the building on an electric railway from Tobique to Bathurst, N.B., about 110 miles. Tobique Narrows is a station on the C.P.R. branch line from Perth Jct. to Plaster Rock, and Bathurst is a station on the Canadian National Rys. Such a line would run through Victoria, Northumberland and Gloucester Counties, a very large undeveloped territory containing considerable resources of timber and water powers.

Winnipeg Electric Ry.—A press report of Oct. 11 stated that it was expected to start laying the stone sets on Logan Ave. on Oct. 13, that the loop will be the first part to be completed, and that the car tracks will be laid on Catherine Ave. and Quetch St. instead of Gallagher Ave., this bringing it 300 ft. closer to the C.P.R. shops than its original location. (Sept., pg. 503.)

Public Utilities Should be Self Supporting.

The recent congress of chambers of commerce of the British Empire, in Toronto, adopted the following resolution, moved by E. P. Fredericks, Secretary-Manager, Belleville, Ont., Chamber of Commerce:—"In the operation of public utilities throughout the Empire such utilities, where operated by the nation or a municipality, should be conducted on a self supporting basis and charges for such service should be sufficient to pay the actual cost of the service rendered, without having to make up a deficit by taxation, and thus adding to the already heavy burdens of taxpayers in all parts of the Empire."

Mr. Fredericks said that the resolution was founded on the very sound commercial principle that any business worthy of the name should be at least self supporting. He pointed out that there is a growing tendency, particularly on this side of the Atlantic, to foist broken down public utilities on communities, with the idea that by some process of magic the community can conduct the business at a loss without anyone having to make up the deficit. He added that most cities

are running just about all the charity institutions that they can afford at present, and he urged that public utilities be made to pay their own way, by charging the people who use the service enough to cover the cost of such service. As the congress was being held in Toronto, he used that city as an example of how a public utility would probably work out under public operation. He said that if a reasonable charge for street railway fares of about 5c. had been permitted two years ago the people would have been able to secure the improvements in service for which they have been clamoring. As the matter stood he did not see how it would be possible to get these improvements now inside of two or three years, and at that time the people will be fortunate if they did not have to pay more than 25c. for four rides. He used these figures, because he assumed that the transportation commission which will operate the road will endeavor to make the service at least break even in the matter of cost, because he did not believe that the city should be asked to make up any annual deficit in the operation of this important utility. The people who use the service should pay for it and this opinion was unanimously endorsed by the congress, in fact, the resolution, after being seconded by Wm. Taylor of Owen Sound, Ont., was adopted without a dissenting voice, and after it had been thoroughly considered by representatives of some of the biggest business interests from all parts of the Empire.

Ottawa's Traction Problem.

O.E.R. News, published by Ottawa Electric Ry., has the following in a recent issue:—Those of our readers who have followed the reviews of the United States Federal Commission's report on street railway conditions in that country will now be in a position to appreciate the local electric railway problem, the features of which may be summed up in a few words. In Aug., 1921, the Ottawa Electric Ry. Co.'s franchise expires. Two courses will then be open to the citizens of Ottawa, to purchase the street railway under arbitration, as provided for by the franchise, or to effect a new operating agreement with the company. If the citizens of Ottawa desire that the electric railway become the property of the city, and be operated municipally, the company will do everything in its power to effect a transfer of its property with as little delay as possible. If the citizens decide not to purchase, a new contract with the company becomes necessary if the present good service is to be permanently maintained.

In Ottawa today we have an operating company with an expiring franchise. Such a situation is one that has been duplicated in many cities on this continent, and because the two parties to the contract were unable to get together in good time and decide upon the best course for the future, many places have passed through a period that has been most unfortunate for the business and social life of the community. There is no doubt that in the course of a very few years extensions will be required here into new areas, and possibly additional traffic routes in the districts now served. To finance such construction will require a definite clear cut understanding that will permit those who will operate the railway to regard the future without fear.

We believe that a contract somewhat along the lines of the Taylor Grant,

which has been in operation in Cleveland for the past 10 years, would be the best possible arrangement for Ottawa. The Cleveland contract has been described by a prominent U.S. public service commission as supplying "the best street railway service at the lowest cost of any city in the U.S." It provides competent public supervision and at the same time expert and practical operation under men who have devoted their lives to successful railway management. Contracts of this kind require a flexible fare, which means that the rates of fare are adjusted by a publicly appointed commission at the end of each year's operations. If the commission find the revenue more than sufficient, the rates for the following year are reduced, and if not sufficient they are advanced. In this manner the revenue is always just enough to properly operate the railway, and provide a reasonable return to the owners of the property, thus making it possible at any time to make such extensions and improvements as the citizens through their commission, desire. The flexible fare idea has proved conclusively to be the proper modern system of street railway operation, so much so that a number of municipalities that own and operate their street railways are adopting it. The U. S. Federal Commission found that "the fixed fare contract failed to meet the requirements of the industry and was a relic of a bygone age."

Perhaps our readers know of some better way of dealing with the problem. If so, their suggestions should be put into workable form, for mere theorizing is of no avail where the situation demands a practical conclusion. The service at present provided is good. Is it not wise to carefully consider the whole matter in good time, and adopt the best possible means to make sure that the present good service be permanently maintained?

"The Company Spirit" in British Columbia.

Geo. Kidd, General Manager, B. C. Electric Ry., has addressed the following to the employees:—"At the beginning of another winter season, let me extend to every employee of the company my heartiest wishes for a thoroughly enjoyable time. As the various social and recreational organizations in the company get under way, I hope everyone will enter into the spirit of comradeship and good feeling that has been a feature of the company's existence in the past.

"We have passed our trying times, both as a country and as a company, and while we have problems to face every day, there is no reason why, through the clubs and social organizations of the company, we should not at the proper time forget such worries and join together in the spirit of friendship rather than merely as fellow workers. To this end, the management has provided such facilities as should enable employees to get together from time to time, and I trust they will be made full use of.

"Club rooms, billiard tables and such material goods, however, do not make a company spirit. It is the human factor that counts, the living organization built up of the will to help. Nothing the company can do will provide pleasant relations among the employees unless each employee puts his heart into the game. Neither is everybody constituted the same way. Some are born leaders, some are not. But those who are not can be receptive to the company spirit that

others are fostering. By taking an interest in social gatherings, by entering into competitions, by attending club functions and otherwise expressing their desire to help, employees can do a lot in their individual ways to make it pleasanter for everyone else. Maybe you are not much of a mixer, but you can at any rate meet others half way. This is especially necessary for new employees of the company. Needless to say, we welcome them to our winter activities and I hope the older employees will make them feel at home.

"If it is true that we should know how to work, it is equally so that we should know how to play and when to play. It is the earnest hope of the management that every employee will enter fully into the spirit of the social activities around the company so that the coming season may be the most enjoyable and successful we have ever had."

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—Brantford, Ont., press dispatch, Oct. 6.—A statement from the Brantford Municipal Ry. Commission shows for eight months of this year gross receipts \$120,419 and gross expenditures \$98,307.49, a gross gain of \$23,111.55. After deducting therefrom interest on bonds and debentures, and making provision for sinking fund, the net gain for the eight months was \$2,584. From the net gain are deducted \$1,666 for depreciation of pavement and \$800 for injuries and damages, leaving a small surplus of \$117.57. The rate of operating expense has gone up from 73.32% in 1919 to 79% this year. Patronage of the West Brantford bus service is growing rapidly.

Electric Railway Notes.

Winnipeg Electric Ry. employees reported joining of the One Big Union is denied.

The Point Grey, B.C., Municipal Council is reported to have notified the British Columbia Electric Ry. that a 20-minute service is required on Oak, Dunbar and Crown Sts., as provided for in the franchise.

The Montreal Tramways Co. took proceedings in the Recorder's Court recently against E. Renaud and Mrs. I. Maggell for using transfers illegally, by giving them away. The accused were fined \$40 each, or in default of payment, two months in jail.

The Regina, Sask., City Council is reported to have decided to take another vote of the ratepayers on the bylaw to authorize the operation of one-man cars on the municipal railway, which was defeated by 428 to 321 when it was submitted in July.

The London, Ont., Railway Commission, has under consideration a suggestion for the reduction of the train service between London and Port Stanley. A report on the matter is being prepared by the Manager for consideration at an early meeting of the Commission.

The Assiniboia, Man., municipal council is reported to be making arrangements for operating motor bus lines in the municipality, owing to some differences with the Winnipeg Electric Ry. An effort is being made to have the difficulties adjusted through the Public Utilities Commissioner.

The Winnipeg City Council's transportation committee has recommended "that on the advice of solicitors, application be made to the Attorney General for a stated case as to the constitutionality of The Public Utilities Act and that any action that may have been taken by the solicitors with this end in view be confirmed."

The British Columbia Electric Ry. has issued a folder, "Fishing and Shooting along the B.C. Electric," which contains very full information about fish and game to be found near the company's lines, with maps of districts, dates of open seasons, particulars of train service and a map of the company's mainland system, which includes the interurban to Chilliwack, "the longest interurban line in Canada."

The Dominion labor party in Winnipeg has the following in its platform programme for the forthcoming municipal elections:—"We demand that the street railway company live up to the terms of the original contract with the city, or surrender the monopoly; and that if the street railway company does not accede to this demand, this party will seek to elect a city council pledged to the establishment of a municipal motor bus service and take such other steps as may be necessary to remove the city's transportation system from private control."

The Quebec Public Service Commission at Montreal, Oct. 7, heard the Montreal

Marine Department

The Port of Victoria, British Columbia

By Thos. C. Sorby, Secretary, Inner Harbor Association of Victoria.

The Port of Victoria, B.C., is situated at the southeastern end of Vancouver Island, and is the first landfall of ships coming inward from the Pacific Ocean toward lower British Columbia or Puget Sound, and it is a port of call for nearly all ships passing inward or outward. It has a wireless telegraph station which can communicate with ships 250 to 300 miles in the open Pacific Ocean and has cable communication with all parts of the globe. Victoria is the capital of British Columbia, with direct railway, telegraphic, telephonic and wat-

lighted, and abundantly supplied with water; its residential streets are boulevarded, with pretty homes on either side in well kept private gardens. Beacon Hill Park, with its placid lakes, surrounded still by numbers of old forest trees, its shady glades and, in its season, the hill ablaze with the golden broom, overlooks the Straits of San Juan de Fuca, with a magnificent view of the distant snow-clad mountains, and presents a scene of ever varying beauty. The presence of the arbutus tree and the native dog-wood tree are evidences of

the center of the sheds.

The wharves of the inner harbor are privately owned, and have a developed frontage of about 15,500 lin. ft. (exclusive of shipyards) and have a large shed area with a depth of water ranging from 16 to 20 ft. at low tide, the latter being the objective depth throughout the harbor. Amongst these commercial wharves are included the outer wharf (Rithet's), with a water frontage of about 2,680 ft. in 30 to 33 ft. of water at low tide and a freight capacity of some 7,000 tons; the whole property covering 16 acres;

Victoria, B.C.—James Bay, Inner Harbor, from the Causeway, showing Canadian Pacific Ry. wharves at the left and Grand Trunk Pacific Coast Steamship Co.'s wharves at the right.

er communication to all parts of Vancouver Island and the mainland. Victoria is so geographically placed that it enjoys a remarkably equable climate, free from storms, with a temperature that seldom exceeds 80 degrees in summer or descends below 20 degrees in winter. It has a moderate rainfall (about 29 in.) and a maximum of sunshine and relatively small amount of fog, and outdoor work is practicable nearly every day throughout the year. The climate is moderated greatly by the Japanese current to the south in winter and the cool winds from the mountains in summer, and it is by reason of this equable climate that the Dominion Government selected Victoria for the location of its astrophysical observatory, erected a short distance north of the city limits. The city is exceptionally well paved and

the mildness of the climate.

The port and harbor of Victoria is situated on an arm of the sea, the entrance being between McLaughlin Point and the western end of Ogden Point breakwater, from which the Dominion Government has recently completed a breakwater 2,750 ft. long, at a cost of \$2,000,000. This structure protects about 90 acres of water from the heavy, southeasterly seas. Inside the breakwater are two concrete piers, erected at a cost of \$2,300,000, providing about 4,000 ft. of berthage in 35 ft. of water at low tide. On the piers are sheds, one 700 x 200 ft. and another 200 x 200 ft. These have rails along the sides and down the center, connected with the car ferry slip, enabling the cars of all the mainland systems to be run from the manufactories of the east, alongside the ships or into

the Brackman-Ker mills and wharf; the Victoria Chemical Co.'s wharf, 336 ft. frontage in 20 ft. of water; British American Paint Works, with a wharf frontage of about 300 ft.; the wharves of the C.P.R. (British Columbia Coast Service), with a wharf frontage of 1,600 ft.; the Victoria Dock Co., about 360 ft.; the Grand Trunk Pacific Coast Steamship Co., about 1,200 ft.; the Canadian Puget Sound Timber & Lumber Co., about 550 ft.; the Consolidated Whaling Co., with a frontage of about 300 ft., and many small wharves.

Railway Communication.—Victoria is the southern terminus of the Esquimalt & Nanaimo Ry., running from Victoria to Nanaimo and Courtenay, the coal fields on the north, and Alberni on the west coast. This line is an integral part of the C.P.R.'s great transcontinental sys-

Canadian and United States systems are connected at the Victoria freight station by car ferry services from Vancouver to British Columbia and Alaska.

The Canadian Northern Pacific Ry. has built a temporary trestle bridge across Barkley Water, with a 10 ft. low-water bridge. The temporary terminals of the railway are on the northern side of the Barkley Road, at the west end of Point Ellice wharf. This will be the temporary terminus of the Spanish Peninsula branch. In connection with its temporary terminus at Point Ellice, the C.N.R. proposes erecting a car ferry slipway, south of the bridge, so that cars to or from the mainland can be taken at any time to or from the slip at the ocean docks at Ogden Point, or to or from any of the wharves in the harbor.

Car Ferry Service.—The development of the car ferry coasting trade is having an important effect upon industries on the Pacific coast, and is doing much to assist their growth. These ferries call at various points along the coast, bringing railway freight cars to mills and other concerns which are not situated

There it will be seen that the greater part of Vancouver Island is directly connected with the Port of Victoria as the distributing center of an island of 16,000 square miles in area, which occupies a most conspicuous position both geographically and strategically on the map of Western Canada. The area is one of infinite and undeveloped wealth; its forests, coal mines, mineral deposits and fisheries all accessible from a lengthy coast line, or by rail.

Coastwise Service.—The C.P.R. Co. has about 2,500 ft. of wharfage in James Bay, with spacious warehouse accommodation. Its B.C. Coast Steamship Service is operating 16 steamships out of Victoria this year, giving semi-weekly service in summer, and fortnightly in winter, to Alaska, and a weekly service to Prince Rupert throughout the year; a regular service to the west coast of Vancouver Island; two ships a day to and from Vancouver, and a daily ship to Seattle every afternoon. These ships all use the Victoria inner harbor, and make their headquarters at the company's piers, and connect with their main line and continental system at Vancouver.

Line), sailings every 28 days to Japan, Hong Kong, Philippine Islands, etc.

Nippon Yusen Kaisha (Japan Mail S. S. Co.), sailings every 10 days to and from Japan and China, in connection with U.S. railways.

The Harrison Direct Line, monthly sailings, to and from Antwerp, Glasgow, London, Liverpool, etc.

The Royal Mail Steam Packet Co., monthly sailings to and from Europe, Hong Kong, China, Ceylon, Manila, and the North Pacific Coast.

The Pacific S.S. Co., weekly sailings to and from San Francisco and California ports.

The Grace Line, to and from Mexico and South American ports, via San Francisco, and from New York via the Panama Canal.

The Osaka Shosen Kaisha, to and from Japan, Hong Kong, Manila, in connection with the Milwaukee Railway.

The Canadian-Australian Royal Mail, Line with monthly sailings to and from Auckland, Sydney, Honolulu, Suva, etc.

In addition to these lines of steamships, there are a number of tramp steamships, carrying sulphur, nitrate of soda, superphosphate of lime, fuel oil,

Victoria, B.C.—Head of James Bay, near C.P.R. landing, looking north, showing Empress Hotel on the left, and Legislative Buildings to the right.

near a railway. The cars are either landed and loaded, or loaded directly on their barges. In this way, industrial concerns that are actually a considerable distance from a railway are given direct rail connection. A car ferry service is maintained every day in the year by the C.P.R., with four car barges and three trips between Vancouver and Victoria and Vancouver Island points.

The Canadian National Ry. is maintaining a similar service between Port Mann, on the south side of the Fraser River, and Patricia Bay, on Vancouver Island, by the new car ferry Canora, which is 308 ft. long, with a beam of 32 ft. and a moulded depth to the shelter deck of 28 ft. The draft loaded is 14½ ft., with a displacement of 3,400 tons, and capacity of 20 cars. Her speed on service is 14 miles an hour.

The B.C. Electric Ry. has a complete street railway service, about 42 miles in extent, connecting Esquimalt and the Naval Station on the west, Oak Bay on the east; and also by interurban line (some 23 miles long), giving rapid service to the municipalities, summer resorts and villages on the Spanish Penin-

There is a weekly service to west coast points on the mainland and three trips a month to the west coast of Vancouver Island and four trips a month to the Gulf Islands.

The Grand Trunk Pacific Coast Steamship Co. has a wharf frontage on James Bay of about 1,450 ft., and operates four steamships, using its own piers in the inner harbor. This fleet makes trips twice a week between Seattle, Victoria, Vancouver, Ocean Falls, Swanson Bay, Prince Rupert, and Anyox. The G.T.P. Ry., with its western terminus at Prince Rupert, is operating transcontinental trains between Prince Rupert and points east, making direct connection with steamships both northbound and southbound.

The Puget Sound Navigation Co. operates steamship between Seattle and Victoria, B.C., and all other important points on Puget Sound.

Steamship Lines. running in and out of the port of Victoria, calling at the outer wharf:—

Discharge charge, no cargo landed, \$1 for first 100 tons and 1½¢ for each additional ton	

Stevedoring

Loading—	
Sailors or general cargo per ton 70c to \$1.00	
Lumber and timber, per m. ft.	\$2.25 to \$2.50
Discharging—	
General cargo, weight and measurement, per ton	\$0.50
Coal, per ton	1.50

Bunker Coal.—At Union Bay, 120 miles from Victoria, the Canadian Collieries (Dunsmuir) Ltd. has ample facilities for the rapid bunkering of all classes of steamships with Comox steam coal. Dispatch can be given at the rate of 400 tons an hour. The company contracts for the supply of this coal to the British Admiralty, Imperial Japanese Navy, Canadian Pacific, Nippon Yusen Kaisha, Blue Funnel, and other steamship companies.

There are also the Canadian Western Fuel Mines at Nanaimo, and the Pacific Coast coal mines at South Wellington.

Fuel Oil.—Inside McLaughlin Point and opposite the outer wharf is the Imperial Oil Co.'s wharf, where fuel oil, gasoline, distillate, lubricating oils, etc., may be obtained.

The principal industries of the port of Victoria are lumbering, shipbuilding with steel and wood, ship repairing, whaling, grain milling, fish canning, and fruit growing and preserving.

The lumbering business is in a very flourishing condition, the present monthly cut of the five mills bordering the harbor being about 8,000,000 ft. and of the shingle mill about 600,000 ft., and these figures would be considerably increased if a sufficiency of tonnage was

in a forest stand of hemlock and spruce, from which there are cut 250,000 ft. a day and there are exported 65 tons of the finished product, about half of which is sulphite, bleached or unbleached. With the development of the adjacent water power these figures would rapidly be increased.

Shipbuilding.—The Harbour Marine Co. has two ways about 400 ft long for building ships of about 8,100 d.w. tons. This yard is fitted with the most modern shipbuilding appliances, including the largest bar-bending furnace on the coast. The 2 ships now building are for the Canadian Government Merchant Marine Ltd., 400 ft. long, 52 ft. moulded breadth, 31 ft. moulded depth, with a draft of about 25 ft. loaded. They will have carrying capacity of about 8,100 tons, with

are heavier than usual, and the construction generally will be above classification requirements. The barquentines will have a large sail spread and will have fine lines, permitting fast sailing. Provision is being made for the complete repairing of wooden ships, this being the nearest yard to the open ocean immediately available to a ship in distress.

The Douglas fir, of which these vessels are mainly built, is indigenous to Vancouver Island and grows to greater size and of finer quality on the island and western slope of the mainland than anywhere else. Douglas fir is exceptionally strong for its weight, a fact more important in the shipbuilding industry than almost any other business. It is important that the material used in ship construction be as light as the desired strength will permit, and Douglas fir is one of the few woods whose strength is above the value set by the well established law of weight vs. strength, and frequently squares 45 in. for a length of 90 ft. In addition to the large timbers and planks obtainable from Douglas fir trees, the stumps yield the finest and largest ship knees in the world. These knees are an important item to the shipbuilder, for as many as 200 or 300 are used in a single boat. For many years the large masts and spars for ships built in various shipyards of the world have been supplied from the Douglas fir forests.

Ship Repairing.—In the upper harbor, or basin, are the Victoria Machinery Depot Co.'s works, having a frontage of about 360 ft. The marine ways are fitted with a cradle 280 ft. long by 60 ft. wide, providing dry dockage for repairing, cleaning, etc., for ships up to 3,000 tons displacement; larger ships are docked by the firm at Esquimalt drydock. At the plant are up to date machine shops, boiler shops, blacksmith's shop, foundry and pattern shop and an extensive wharf area for receiving and storage of goods. A 9-ton steam hammer, an oil furnace and another oxy-acetylene welder have been added to the equipment of the company's blacksmith shop, which was recently enlarged by an addition measuring 36 x 40 ft. The old steam hammer in the shop delivers a blow of three tons, while the new one is the largest in the city.

Yarrows Limited shipbuilding, engineering and ship repairing plant is situated in Esquimalt Harbor near Victoria, close to the government drydock, and is adjacent to the site of the new dry dock. This yard is specially equipped to cope with ship repair work and the facilities for the quick dispatch of repairs have been steadily improved and added to. The marine railway can accommodate ships up to 315 ft. long and 3,000 tons displacement, larger ships up to 480 ft. being accommodated in the adjacent drydock. The wharf is 600 ft. long, can accommodate ships on both sides up to 23 ft. draft, and is equipped with shearlegs capable of lifting 60 tons, and is fitted with compressed air, water and electric leads, etc. There is a floating crane of 10 tons capacity, and also a floating compressed air plant and other facilities. The yard is equipped with up to date machine shops, boiler shops, joiner shop, pattern shop, and foundry, also copper-smith and pipe shop, powerful portable electric welding and galvanizing plant.

Dry Docks.—The Esquimalt drydock, near Victoria, is owned by the Dominion Government. Length of dock to gate, 450 ft. at keel blocks; 480 ft. at curb; width at gates, 65 ft.; depth of water, 27 to 29 ft.; minimum charge, \$100 a

Douglas Fir Trees, on the road to Alberni, Vancouver Island.

available for the transportation of the manufactured products to the markets needing the goods.

Wood pulp and paper making woods, in inexhaustible quantities, border the ocean and navigable waters within easy transportation to Victoria. The products of the mills find ready market in Australia, Japan, China, Great Britain, Europe and the northwestern United States. The Powell River mills have a daily capacity of 250 tons of news print. For export purposes ships can load direct at Swanson Bay. The sulphite and fiber mills are capitalized at \$2,500,000 and have a capacity of from 60 to 70 tons a day, the product being shipped to Vancouver and Prince Rupert for rail transportation. These mills are situated

an estimated speed of 12 knots. They are of the two-deck type, with poop, bridge and forecastle, straight stem and elliptical stern.

The Cholberg Ship Co., established for the building of wooden ships, has built 4-masted sailing schooners 210 ft. long, 45 ft. beam, 22 ft. moulded depth, cargo capacity 1,500 d.w. tons, or 1,100,000 ft. b.m. lumber, built to British Lloyd's requirements, adapted for the installation of auxiliary engines on their completion. The ships now building will be of 2,400 d.w. tons, with a capacity of 1,500,000 ft. of lumber. Heavy metal knees of forged steel will replace the usual wooden ones, resulting in there being room for 75,000 ft. more lumber than with ordinary methods. The timbers and bolts

day. The Dominion Government proposes to construct at this location a new wharves at Esquimalt, but has, hitherto, adhered to Yarrow's wharves. The plan proposes the following dimensions: Length, from caisson to caisson, 1,100 ft.; width of caisson, 120 ft.; width of fill at ordinary high water, 140 ft.; 4 ft. width at center of dock, 144 ft. The dock will be divided into two sections, 650 ft. and 500 ft. respectively, each part to be built on a caisson. For the proposed caisson, 120 ft. x 120 ft. x 120 ft. with a pumping capacity of 100,000 gals. per minute, will be used.

Electric power, generated by the dock power plant, will run the pumps and other machinery. The walls of the dock will be of concrete with granite copings. The keel and bilge blocks will rest on granite strips extending the full length of the dock, and granite will be used for the caisson stops. A basin, 560 x 200 ft., will be provided on the south side of the drydock, for the repairing of ships while afloat and to permit the unloading of cargoes before ships enter the graving basin. The structure around the basin will be built of reinforced concrete. Other units of the drydock plant will include: boiler shop, 128 x 60 ft.; machine shop, 240 x 100 ft.; copper and pipe shop, 120 x 60 ft.; general store, 123 x 60 ft.; forge and smith shop, 144 x 60 ft.; smith repair shop, 240 x 80 ft.; slab furnace and angle smith shop, sail loft, paint shop and store. Other buildings to be erected in connection with the drydock will include a spacious generator house, oil service tanks, and oil cistern, lined with concrete, office buildings and various details associated with an industrial plant of this magnitude.

Fishing Industry.—The B.C. salmon fisheries are a most important industry, the activities of which spread over all the rivers and inlets of the B.C. coast. One cannery at Esquimalt, close to Victoria, puts up about 30,000 cases a year. The fish are caught in traps in Straits of San Juan de Fuca. They are shipped mostly over the C.P.R. and other railways to the European markets. There are two or three other canneries on Vancouver Island doing an extensive business, and many more on the mainland. The total pack in B.C. in 1919 was 1,393,156 cases, valued at \$15,000,000, of which the Vancouver Island pack was 165,000 cases, made up principally of sockeyes, red springs, cohoes and pinks, the balance being chums and white springs. The annual export of salmon is about 175,000 tons, of cod about 1,000 tons, of herring 23,000 tons, with halibut, oolachans, trout and clams in corresponding large quantities. Seventy-five per cent. are exported to Great Britain and other large consumers are France, Italy and Greece.

The Consolidated Whaling Corporation Ltd. (late Victoria Whaling Co.) has been incorporated recently with head offices at Toronto and a capital of \$2,500,000. Large consignments of whale oil have been brought to Victoria recently from the various stations on the west coast of Vancouver Island and the Queen Charlotte Islands. The oil is loaded at the wharf side into tank cars, owned by the whaling company, each having a capacity of 200 barrels. The Canadian National Rys. ferry barge, with a capacity of eight cars, is towed to Port Mann, on the mainland, where the oil is shipped to eastern markets. Victoria is the home port for the company's fleet.

The Vancouver Island Whaling Co.

operates from Barkley Sound. Its ships are the largest on the coast, fitted with the most modern appliances and having a speed of 14 knots. In addition to oil production, the company manufactures fertilizer, for which there is considerable demand, from the whale, dog-fish and other fish offal.

Fruit Industry.—At the southern end of Vancouver Island, the district around Keatings and Gordon Head, contiguous to Victoria, is remarkable for fruit-growing. It produces the finest strawberries on the American continent for flavor, color and keeping qualities. The fruit begins to ripen early in June, and picking lasts about six weeks. The earlier pickings are larger and firmer, packed in boxes and used fresh; the later pickings are smaller, and are mostly used for jam. Next to the strawberry is the logan berry, a most delicious fruit, either eaten fresh or made into jam. It grows rapidly to a large size, over trellis work. It is seldom attacked by pests, continues to bear for years, and forms a valuable crop each succeeding year, with but little attention. Amongst the pit fruits, cherries and Italian prunes are the most profitable ones to cultivate in this locality and yield good results. There is practically an unlimited market for these small fruits and producers need not be afraid of over-producing.

Poultry Raising.—The climatic conditions of the southern portion of Vancouver Island are particularly favorable for poultry raising. With a small capital investment, the poultry business shows a greater income return than any other branch of industry.

The foregoing paper will be read before the American Association of Port Authorities at Chicago in October.

The manufacture of Portland cement by the British Columbia Cement Co. at Pemberton and Todd Inlet is one of the important industries in the immediate neighborhood of Victoria. These two plants are capable of turning out 1,500,000 barrels a year. Both plants are on tidewater and possess the latest manufacturing machinery.

Water Powers.—Vancouver Island is rich in available sources of hydraulic and hydro electric power, and this factor is one of its great natural assets. Taking Jordan River and Goldstream as strategic to Victoria, the B.C. Electric Ry. Co. has 25,000 h.p. developed out of an estimated capacity of 38,000 h.p.; and out of the 25,000 h.p. there is still 12,000 available for prospective industrial use, over and above the present maximum demand, enough to supply the needs of Greater Victoria and the Saanich Peninsula. On the Puntledge River, near Coquitlam, there is a development of 19,000 h.p., of which 9,500 is installed, and approximately 5,000 h.p. available over and above the present maximum load. In the Alberni district there are about a dozen available sites of varying capacities from 1,000 to 20,000 h.p., at present undeveloped, at Quesnais some 10,000, at Nanaimo River some 20,000, and at Campbell River there is upwards of 100,000 h.p. available at one site, which is specially suitable for electric transmission over a considerable area of mining country within feasible transmission distance. On the mainland, within a radius of 100 miles from the City of Vancouver, there is upwards of 750,000 h.p. available, present developments being greatly in excess of the demand. The same plenitude of available power facilities is found along the lines of railway development all over the province,

only waiting to be harnessed up for industrial purposes. The water powers along the coast are within a short distance of tidal water; the harbors are open and accessible at all times of the year.

Longshoremen's Wages at Prince Rupert.

A board of conciliation, to adjust longshoremen's wages at Prince Rupert, B.C., presented a unanimous report recently, and an agreement was entered into between the Pacific Stevedoring & Contracting Co., Grand Trunk Pacific Ry., and G.T. Pacific Coast Steamship Co. and International Longshoremen's local 38-41, the following rates of wages being agreed on, retroactive to July 16:—

General longshore work—10¢ per hour day time and \$1.10 overtime. Eight hours to constitute a day's work.
Coal and ore in bulk—\$1 per hour day time and \$1.20 overtime.
Crane and lots of over 25 tons—\$1 per hour day time and \$1.20 overtime.
Fertilizer and plaster in lots of over 25 tons—\$1.15 straight time.
Prosser, any quantity—\$1.10 straight time.
Sawpulp in bulk, any quantity—\$1.25 straight time.
Crushed lumber and poles—\$1.10 straight time.
Double winch drivers—\$1.10 day time and \$1.20 overtime.

The following conditions also govern: Eight hours, viz., 8 a.m. to 12 noon and 1 to 5.00 p.m. will constitute a day's work. All time before 8 a.m. and after 5 p.m. and meal hours when worked will be considered overtime.

Longshoremen will line up to G.T.P. no. 2 shed each morning at 8 o'clock, remaining for half an hour. If men are not hired in that time, they may retire to hall, where they will be subject to call up to 11 a.m. The men shall line up for work in the afternoon at 1 o'clock, remaining for half an hour, when they shall then retire to the hall, and will be subject to call up to 5 p.m. The men required for night work shall be notified at the hall not later than 5 p.m., when information as to requirements for night duty is possible to be obtained at that time. In either cases, if there are not sufficient men, either at dock or hall, the union shall endeavor to supply the requisite number, and failing that the employer shall obtain men wherever available.

All men hired for night work and reporting for duty between 7 p.m. and midnight, shall be entitled to a minimum of two hours pay at regular rates. After midnight up to 6 a.m. to four hours pay, when boat fails to arrive at the time for which the men are ordered. If kept under orders for longer periods, they shall receive regular rates for such further time they are kept under orders.

It is understood that these rates of wages and conditions will govern longshoremen employed on the docks at Prince Rupert, B.C., and shall be applicable to coastwise work only, subject to 30 days notice of cancellation or revision from either party.

Toronto Harbor Commission.—The City of Toronto has re-appointed, for a further term of three years, its three representatives on the Commission, viz., Lieut. Governor Lionel Clarke, Mayor T. L. Church and R. Home Smith. The other members of the Commission are John Laxton, appointed by the Dominion Government, and R. S. Gourlay, appointed by the Dominion Government on the Toronto Board of Trade's nomination. Their terms of office expired Oct. 22 and at the time of writing no announcement had been made as to the re-appointment.

Port Arthur Shipbuilding Co.'s Annual Report.

Following are extracts from the Port Arthur Shipbuilding Co. Ltd. annual report for the year ended June 30, 1920:—

The company has this year experienced a reduction in gross earnings due to a decrease in volume of business. The falling off of work has been in ships for new construction; business from dry dock and repair work being very satisfactory, showing an increase of 80% over last year. A falling off in the building of ships has been general, affecting all the shipyards in Canada. The chief causes have been the international exchange situation, which has operated against Canadian yards securing contracts from European countries requiring tonnage, and the cessation of building by the Canadian Government.

Of ships, construction of which was commenced last year, the company completed and delivered four freight steamships of 3,400 d.w. tons each, and launched two freight steamships of approximately 4,500 d.w. tons each, which will be completed and delivered one in September and one in October. All of these ships are for the Canadian Government Merchant Marine fleet. New ship construction commenced this period consists of one freight steamship of approximately 4,000 d.w. tons for the Canadian Government, and one freight steamship of about 3,000 d.w. tons.

In view of the present situation in regard to ship construction, your directors have deemed it advisable to authorize the company to enter upon other work than shipbuilding to which your plant is adaptable. Work has already been commenced upon a contract for 20 compressed air mine shovels for one company, and negotiations with other companies requiring this class of machine have advanced to a point where other contracts seem assured. The undertaking of other suitable work, including the manufacture of pulp machinery and digesters, is also contemplated. If nothing unforeseen arises to interfere with plans at present under consideration, which appear as far as investigation has gone to be entirely feasible, developments along these lines may, within a short time, result in an amount of business equal to, if not greater, than the falling off in new construction, and this at very small additional capital expenditure.

During the year the company redeemed \$126,500 par value of preferred stock, and retired \$60,000 par value of mortgage bonds. Capital expenditures made this year have been for ordinary additions and betterments only, including the installation of some improved machinery, and amounted to \$94,846. A recent appraisal of the company's permanent assets, book value of which is \$2,091,522, shows the present net cash value to be \$3,250,000.

Financial Statement, June 30, 1920.

ASSETS.

Cash, accounts receivable and merchandise inventory	\$1,088,960.65
Construction work in process	1,974,027.15
Land, buildings, machinery, etc. (less depreciation)	2,091,522.18
Good will	713,359.51
Miscellaneous accounts, notes and prepaid expenses	114,292.69
	\$5,982,162.13

LIABILITIES.

Acceptances, accounts payable and accrued	\$166,274.40
Dividends payable	49,141.00
Provision for Dominion tax (estimated)	241,512.95

Advances on construction contracts	1,801,910.00
Bonded debt	450,000.00
Reserves for construction work	127,701.92
Capital stock	
Preferred, 7% cumulative	\$665,200.00
Common	1,500,000.00
	2,165,200.00
Surplus	990,421.86
	\$5,982,162.13

Earnings for June 30, 1920.

Gross profit from operations after deducting cost of material, labor, and manufacturing overhead	\$538,369.28
Less, general and administrative expense	164,183.24
	\$374,186.04
Add, miscellaneous income	109,110.08
	\$483,296.12
Deduct, amortization of plant additions, bond interest and miscellaneous charges, including estimated Dominion tax	182,081.56
Net earnings for year	\$301,214.56

The directors are: Jas. Whalen, Port Arthur, President; P. G. Chace, Port Arthur, First Vice President; R. D. Hubbard, Chicago, Second Vice President; A. J. McComber, Port Arthur, Third Vice President; Jno. Burnham and E. W. Rogers, Chicago, and Jas. Playfair, Midland, Ont. The principal officials are: J. H. Smith, General Manager; A. B. Conmee, Secretary-Treasurer, and N. S. Thrasher, Purchasing Agent.

Oil Fuel Results on s.s. Empress of Britain.

Engineer Rear Admiral G. W. Roome, O.B.E., Chief Superintendent Engineer, Canadian Pacific Ocean Services, London, Eng., is reported to have made the following statement recently, on oil versus coal for liners, as exemplified by the recent double voyage of the reconditioned Empress of Britain between Liverpool and Quebec:—

"The use of oil fuel on this double trip of the Empress of Britain was an unqualified success, about 20% above the full power designed was obtained on the trip westward. The speed was as great as the fastest run ever made when the ship was new. The run eastward was intended to show the most economical possible running to maintain the scheduled time on arrival. The speeds were approximately, 18½ knots outward, and 17½ knots homeward.

"The whole installation for burning oil fuel worked perfectly throughout, and the machinery, which is now 14 years

old, did not give the slightest trouble. At present it is more expensive to burn oil than coal, but the wage cost of about 100 men is saved, with the consequent reduction in the pay and food account. There is also a saving in the cost of cleaning the ship. The inherent dustiness of coaling used to involve days of cleaning work by 300 to 400 men each trip. Also, only half a dozen men are required to put oil on board, whereas 150 to 200 were required to coal the ship. Finally, with oil, a more uniform steam pressure is obtainable, and less dirt forms in the boilers and furnaces, all of which lead to economy.

"Experience over a period will show whether there will be a total saving in cost. We have four ships being built, all fitted to burn oil fuel only. A trial with them will decide whether we will have our other ships converted from coal to oil."

Navigation Lights on Great Lakes and St. Lawrence River.

All Canadian lights and fog alarms on Lake Superior will be kept in operation this autumn until the close of navigation, with the exception of those at Otter Island, Caribou Island, Quebec harbor, Davieux Island, and Michipicoten Island east end, which will be closed on Dec. 15, and with the exception of Gargantua, Michipicoten harbor, Corbeil Point, and Ile Parisienne, which will be closed on Dec. 20; also Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island, and Victoria Island, which will be closed after the last sailing to or from Port Arthur and Fort William. All Canadian lights and fog alarms on Lake Huron, Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario, and connecting waters, will be maintained in operation until the close of navigation, excepting the southeast shoal lightship, Lake Erie, which may be removed after Dec. 1, and also Lonely Island light, Georgian Bay, which may be closed before the general close of navigation. All Canadian lights on the River St. Lawrence will be maintained in operation until the close of navigation. All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions will permit, and in cases where it is necessary to remove gas buoys before the close of navigation, the more important points will be marked by spars.

Sault Ste. Marie Canals Traffic.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Passenger Accommodation for West Indies Trade.—As stated in Canadian Railway and Marine World for October, the steel hulls of the steel cargo steamships, *Canadian Victor* and *Canadian Forester*, are being built for the Fish-

Oct. 14, s.s. *Canadian Skirmisher*, Marine Department contract 50; builder's yard no. 101; approximately 8,390 d.w. tons; Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C.

Launching of Steamships.—Since Canadian Railway and Marine World for Oc-

tober, Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C.

Oct. 19, s.s. *Canadian Rover*; Marine Department contract 57; builder's yard no. 92; approximately 8,390 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont.

Steel Cargo Steamship, *Canadian Victor*, 8,432 d.w. tons, built for Canadian Government Merchant Marine, Ltd., by Canadian Vickers, Ltd., Montreal.

water Shipbuilders Ltd., Three Rivers, Que., for Canadian Government Merchant Marine, have been changed from the original plans, so as to provide accommodation for 28 passengers on each ship. The *Canadian Fisher* was launched Aug. 14, and *Canadian Forester*, Sept. 20, and it is expected that they will start running, early in 1921, for the winter season, between St. John, N.B., the Bahamas, Jamaica and British Honduras, as provided for in the Canada-West Indies Trade Agreement, entered into at Ottawa in July, between the Dominion Government and the governments of the other colonies mentioned, which calls for a fortnightly service.

The last four steel cargo steamships ordered by the Marine Department from Canadian Vickers Ltd., Montreal, for Canadian Government Merchant Marine, each of approximately 8,390 d.w. tons, viz., *Canadian Victor*, which was delivered Aug. 25; *Canadian Conqueror*, which was delivered Sept. 30; *Canadian Commander*, the launching of which was fixed for Oct. 20, are each being provided with accommodation for four passengers, so that commercial travellers and others may be carried. The accommodation, which is located on the bridge deck, consists in each ship of 2 staterooms, one outside and one inside, each 9 x 12 ft., and each containing two berths, sofa, wardrobe and folding lavatory; dining room 18 x 12 ft., containing 2 tables, each with 3 chairs and couch, to accommodate 12 at a sitting; smoking room, 18 x 12 ft., containing 2 tables, 4 chairs, and couch seats all round. Illustrations of these rooms on s.s. *Canadian Victor* are given herewith.

Keel Laying.—Since *Canadian Railway and Marine World* for October was issued we have been advised of the following laying of keel for steel cargo steamships for Canadian Government Merchant Marine.

tober was issued, we have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine.

Sept. 29, s.s. *Canadian Traveller*; Marine Department contract 30; builder's

Oct. 30, s.s. *Canadian Commander*; Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons, Canadian Vickers Ltd.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian

Passenger Stateroom, s.s. *Canadian Victor*, Canadian Government Merchant Marine Ltd.

yard no. 22; approximately 8,390 d.w. tons, Harbour Marine Co., Victoria, B.C.

Oct. 14, s.s. *Canadian Highlander*; Marine Department contract 55; builder's yard no. 103; approximately 8,390 d.w.

Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine, for operation.

Sept. 30, s.s. *Canadian Conqueror*; Ma-

rine Department contract 51; builder's yard no. 78; approximately 8,39 d.w. tons; Canadian Vickers Ltd., Montreal. This ship loaded a general cargo at Montreal, and sailed thence, Oct. 5, for Liverpool.

porated, under the Dominion Companies Act, as another Canadian Government Merchant Marine Ltd. subsidiary, to operate the steamship Canadian Coaster, approximately 8,390 d.w. tons, built recently by Collingwood Steamship Co.

and the ship delivered to Canadian Government Marine by the end of October.

Canadian Vickers Ltd., Montreal, delivered the steel cargo steamship Canadian Conqueror; Marine Department contract 51; builder's yard no. 78; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, on Sept. 30. She was loaded with general cargo at Montreal, and sailed Oct. 5 for Liverpool.

Canadian Vickers Ltd. advised us Oct. 12 that it expected to launch steel cargo steamships for Canadian Government Merchant Marine as follows:—s.s. Canadian Commander; Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons; on Oct. 30. Canadian Leader; Marine Department contract 53; builder's yard no. 80; approximately 8,390 d.w. tons; on Nov. 20.

Canadian Vickers Ltd., launched the steel cargo steamship Canadian Commander; Marine Department contract 52; builder's yard no. 79; approximately 8,390 d.w. tons; on Oct. 30, the christening being performed by Mrs. C. C. Balantyne, wife of the Minister of Marine and Fisheries and of the Naval Service.

Collingwood Shipbuilding Co., Collingwood, Ont., launched the steel cargo steamship Canadian Rover; Marine Department contract 57; builder's yard no. 67; approximately 3,890 d.w. tons, for Canadian Government Merchant Marine, Oct. 19, the christening being performed by Mrs. H. B. Smith, wife of the Collingwood Shipbuilding Co.'s President.

After the launching, Mr. Smith entertained a number of the business and professional men of Collingwood at luncheon there, and in speaking referred to the Collingwood Shipbuilding Co.'s industry, and in regard to shipbuilding and steel manufacturing generally. J. S. Leitch, Managing Director, responded to the toast of the company, which was propos-

Corner of Dining Room, s.s. Canadian Victor, Canadian Government Merchant Marine Ltd.

Oct. 4, s.s. Canadian Runner; Marine Department contract 32; builder's yard no. 43; approximately 4,350 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont. This ship, after taking a cargo of coal from Port Arthur to Port Colborne, was cut in two for taking through the Welland and St. Lawrence canals, and was joined together at Canadian Vickers Ltd. plant at Montreal. After delivery to Canadian Government Merchant Marine, she loaded a cargo of lumber at Campbellton, N.B., for the United Kingdom.

Oct. 15, s.s. Canadian Carrier; Marine Department contract 33; builder's yard no. 43; approximately 4,350 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont. This ship was cut in two on Lake Erie, to go through the Welland and St. Lawrence canals, and was joined together at Canadian Vickers Ltd. plant at Montreal. After delivery to Canadian Government Merchant Marine, she loaded a general cargo at Montreal for Glasgow and was expected to sail thence about Oct. 26.

Officers of Steamships.—The following officers have been appointed to Canadian Government Merchant Marine steamships since those mentioned in our last issue:—

Masters.—Canadian Carrier, Capt. H. W. Robson; Canadian Highlander, Capt. R. J. Fisher, formerly of Canadian Trooper; Canadian Signaller, Capt. D. O. Davies, vice Capt. R. D. Maxwell, transferred; Canadian Trader, Capt. G. Foy, vice Capt. J. Murray; Canadian Trooper, Capt. R. D. Maxwell, formerly of Canadian Signaller, vice Capt. R. J. Fisher transferred; J. A. McKee, Capt. J. F. Smeltzer, vice Capt. J. Lintlop; Sheba, Capt. M. Fraser, vice Capt. J. C. Shaw, deceased.

Engineers.—Sheba, J. A. McLarty; T. Drummond, C. B. Scott.

Canadian Coaster Ltd. has been incor-

porated, under the Dominion Companies Act, as another Canadian Government Merchant Marine Ltd. subsidiary, to operate the steamship Canadian Coaster, approximately 8,390 d.w. tons, built recently by Collingwood Steamship Co.

Corner of Smoking Room, s.s. Canadian Victor, Canadian Government Merchant Marine Ltd.

tered, which was cut in two to go through the Welland and St. Lawrence canals, were docked on Oct. 13, at Canadian Vickers Ltd. plant, Montreal, and that it was expected to have them joined together,

ed by the Mayor.

J. Coughlan & Sons, Vancouver, B.C., advised us Oct. 6 that they expected to lay the keels of steel cargo steamships Canadian Transporter and Canadian

From the Marine Department contracts for building the yard nos. 21 and 22; approximately 8,390 d.w. tons; between Nov. 15 and 20.

Dominion Shipbuilding & Repair Co., Limited, which was organized on July 31, 1919, for the construction of Canadian Government Merchant Marine, has steel cargo steamships, Canadian Pathfinder and Canadian Harvester, each approximately 8,390 d.w. tons; were both in frame, awaiting steel plates before fitting out. One of the hulls could be procured with an order to Canadian Railway and Marine World for October, the other hulls, under contract, were anticipated to be completed by the end of the year. The company, to co-operate, so that the loss sustained by the Government might be reduced to the minimum, either by the liquidator continuing the work on a cost plus basis, or by permitting the Government to proceed itself. The liquidator advised us Oct. 15 that the company had made an order directing him to deliver the hulls, engines, etc., to the Dominion Government, and that bills of sale had been executed, but that he had not had any advice as to when the Government proposed to commence operations for the completion of the ships.

Halifax Shipyards Ltd., Halifax, N.S., expects to deliver the steel cargo steamship Canadian Mariner; Marine Department contract 21; builder's yard no. 1; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine; between Nov. 15 and 20.

The company expects to launch the steel steamship Canadian Explorer; Marine Department contract 22; builder's yard no. 2; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine; early in December.

The launching dates of steel cargo steamships Canadian Cruiser and Canadian Constructor; Marine Department contracts 38 and 39; builder's yard nos. 3 and 4; each approximately 10,500 d.w. tons; will depend entirely on weather conditions during the winter, but if they are normal the launchings will probably be in April and June, 1921.

Harbour Marine Co., Victoria, B.C., launched the steel cargo steamship Canadian Traveller; Marine Department contract 30; builder's yard no. 2; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine; Sept. 29, the christening being performed by Mrs. McIntosh, wife of J. C. McIntosh, M.P. for Nanaimo. We are advised that this is the 153rd ship to be built under the direction of J. S. Clark, M.I.N.A., who is now the company's naval architect. Ex-service men provided 85% of the labor for this ship.

Harbour Marine Company expects to deliver the steel cargo steamship Canadian Winner; Marine Department contract 29; builder's yard no. 1; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, during the first week in November.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—We were advised Oct. 5, that the contract between this company and the Marine Department, for building the steel cargo steamship Canadian Sapper; Marine Department contract 59; builder's yard no. 8; approximately 2,800 d.w. tons; for Canadian Government Merchant Marine, had been agreed upon and was in the Department's hands for signature.

The company expects to launch the s.s. Canadian Sapper on November 9.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The steel cargo steamship

s.s. Canadian Runner, Marine Department contract 32; builder's yard no. 43; approximately 4,350 d.w. tons, built by this company for Canadian Government Merchant Marine, and which left Port Arthur, Aug. 8, with a cargo of grain for Port Colborne, was cut in two for taking through the Welland and St. Lawrence canals, and was joined together at Canadian Vickers Ltd. plant, Montreal, being delivered to Canadian Government Merchant Marine for operation on Oct. 4. She loaded a cargo of lumber at Campbellton, N.B., for the United Kingdom.

The s.s. Canadian Carrier; Marine Department contract 33; builder's yard no. 44; approximately 4,350 d.w. tons; built by the Port Arthur Shipbuilding Co. for Canadian Government Merchant Marine, and which was cut in two on Lake Erie, to go through the Welland and St. Lawrence canals, and was joined together at Canadian Vickers Ltd. plant at Montreal, was delivered to Canadian Government Merchant Marine, for operation, on Oct. 15, when she proceeded to load a general cargo for Glasgow and was expected to sail from Montreal about Oct. 26.

The company advised Canadian Railway and Marine World recently that it expected to launch the steel cargo steamship Canadian Harvester; Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons; for Canadian Government Merchant Marine, on Oct. 30.

Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C., which laid the keel of the steel cargo steamship Canadian Highlander; Marine Department contract 55; builder's yard no. 103; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, on Mar. 30, launched her on Oct. 4.

The company laid the keel of the steel cargo steamship Canadian Skirmisher; Marine Department contract 56; builder's yard no. 104; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine on Oct. 14.

The Bear River Steamship Co. Ltd., the incorporation of which, with office at Bear River, N.S., was announced in a recent issue, has an authorized capital of \$150,000 and intends operating a steam packet service between Bear River, N.S., and St. John, N.B. It will take over the shipping business carried on heretofore by Clark Brothers, Ltd., Bear River. The company has a subsidy from the Provincial Government of \$650 a year for a local steamship service and at one time the Dominion Government also gave a subsidy. The officers are:—President, W. W. Clark; Vice President, A. G. McIntyre; Secretary, J. H. Cunningham.

The Necessity of Increasing British Shipbuilding Urged.

The recent congress of chambers of commerce of the British Empire, in Toronto, adopted the following resolution, moved by E. P. Fredericks, Secretary Manager, Belleville, Ont., Chamber of Commerce:—"That the British merchant marine be maintained in its commanding position and that every colony possessing the facilities to aid in this purpose be encouraged to maintain shipyards and to contribute all the British bottoms possible, thus retaining for the benefit of the Empire the skilled mechanics who are being sought by other countries, and also to ensure British marine supremacy."

In supporting the resolution, Mr. Fredericks said it was inspired by the apparent falling off in British shipbuilding operations, which had been made evident by the fact that Canada, as well as the mother country, has within the past year lost several thousand mechanics skilled in shipbuilding work, because of the letting down of shipbuilding operations of this character throughout the Empire. He pointed out that the clearances at Canadian ports as well as ships passing through the Panama Canal, indicated that other countries were pressing the British Empire very closely in the number of ships in commission, and that, where three or four years ago Great Britain had a commanding lead, the figures of the past year showed that the margin in her favor was so slight as to be almost negligible. He contended that if the British supremacy on the sea was to be maintained, and if the extension of trade throughout the world was to be realized, it would be necessary to keep shipbuilding very prominently in the foreground of present activities.

Prince Edward Island Car Ferry Service.—In consequence of the large freight traffic between Prince Edward Island and the mainland of New Brunswick, particularly in potatoes, it was thought possible, early in the autumn, that the car ferry steamship Prince Edward Island might not be able to handle all the business offering. We were advised Oct. 1, that the car ferry Scotia No. 1, used heretofore on Canso Strait, had been altered at one end, so that she could be operated between Port Borden, P.E.I., and Cape Tormentine, N.B., and that if the business warranted it she would be put on that route, to assist the car ferry Prince Edward Island, and would be kept running until ice conditions and storms were too heavy to permit of her operating.

General Shipbuilding Matters Throughout Canada.

B.C. Marine Ltd., Vancouver, B.C.—An important business building and Marine World recently that it expects to launch the building of a general cargo steamer, which is a building for the Harbour Marine Co., about the end of October or early in November, and to have the completed ship by the end of December.

B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C.—This company, which is a subsidiary of the B.C. Marine Co., has been ordered by the Harbour Marine Co. for October, to complete B.C. Marine Ltd., as a general cargo steamer, which is a building for the Harbour Marine Co., about the end of October or early in November, and to have the completed ship by the end of December.

Fraser, Brace, Ltd., Vancouver, B.C.—This company, which is a subsidiary of the B.C. Marine Co., has been ordered by the Harbour Marine Co. for October, to complete B.C. Marine Ltd., as a general cargo steamer, which is a building for the Harbour Marine Co., about the end of October or early in November, and to have the completed ship by the end of December.

Fraser, Brace, Ltd., Vancouver, B.C.—This company, which is a subsidiary of the B.C. Marine Co., has been ordered by the Harbour Marine Co. for October, to complete B.C. Marine Ltd., as a general cargo steamer, which is a building for the Harbour Marine Co., about the end of October or early in November, and to have the completed ship by the end of December.

It is said that the tendency in future will likely be for the production of smaller ships, it being alleged that the timber resources is not suitable for ships of more than 150 tons."

Novia Scotia Steel & Coal Co., New Glasgow, N.S., completed its seventh steel cargo steamship, Volunda, approximately 2,800 d.w. tons, on Sept. 25. This ship, which will be employed in the coal and iron trade on the Atlantic coast, and to and from Newfoundland, was described in Canadian Railway and Marine World for September, pag. 510.

Port Arthur Shipbuilding Co., Port Ar-

Steel Cargo Steamship, Cts. of Vancouver, approximately 2,800 d.w. tons, built for Vancouver Steamships Ltd., by J. Coughlan & Sons, Vancouver, B.C.

Chairman and Managing Director; J. K. McKenzie, General Superintendent; C. J. Laid, Secretary; G. G. Baskby, H. F. Buller, Capt. W. M. Crawford.

Canada Steamship Lines.—We were advised Oct. 2, that it had not been decided whether to fabricate the material for the company's 1,000-ton steel cargo ship, for the Toronto-Niagara route, at Port Arthur and ship it to Toronto for delivery, or to have it fabricated at Toronto. At stated in Canadian Railway and Marine World for September, the steel has been ordered, but it is impossible to say when work on the ship will commence, as deliveries of steel are very uncertain.

J. Coughlan & Sons, Vancouver, B.C.—The City of Vancouver, which was launched Sept. 10, as announced in our

and Fraser, Brace Shipyards Ltd.

Harbour Marine Co., Victoria, B.C., reports that good progress is being made in building the car ferry for the C.P.R. and that it should be ready for launching early in November.

Newfoundland.—Canadian Trade Commissioner W. B. Nicholson writes as follows:—"The shipbuilding industry was fairly active during the war, though not on a large scale. A Norwegian company operating at Harbour Grace went into liquidation, while other plants, anticipating a fall in prices through the belief that business was being overdone, reduced operations. Marine underwriters recorded a disastrous year for Newfoundland sailing ships, the losses of foreign and local ships numbered more than 130, exceeding anything in previous years. It

thur, Ont.—The company's annual report, published on another page of this issue, refers to the construction of a steel cargo steamship of about 3,000 d.w. tons. We were advised, Oct. 11, that all the material for this ship was on hand, and that the keel would be laid about the end of October, the intention being to complete the ship by the opening of navigation next spring. It is being built on the company's account, and negotiations for its sale are going on.

Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C., advised us, Oct. 15, that it expected to lay the keel for a steamship for the C.P.R. British Columbia Coast Steamship Service, about the end of October. Particulars of this ship were given in Canadian Railway and Marine World for October, pag. 564.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

British Columbia, Queen Charlotte Islands.—A gas beacon, consisting of a white acetylene light, automatically occulted at short intervals, visible 8 miles from all points of approach, at an elevation of 22 ft., on a concrete base, surmounted by a staff carrying a slatwork ball with light on top, has been established on the most easterly islet of the Straie Islet group on the west side of the entrance to Masset harbor.

The radiotelegraph station at Ikeda Point, call letters V.A.I., has been permanently discontinued.

Newfoundland, Placentia Bay.—The occulting white light on Point Verde has been replaced by a flashing white acetylene gas light showing 14 flashes every minute. The light is at an elevation of

which lies about 900 ft. 57° from the north end of the south breakwater in Richibucto harbor, Northumberland Strait.

St. John Harbor.—A black wooden spar buoy has been established off Collins point at the entrance to Glenwood channel; a red wooden spar buoy has been established off the inner end of Catons Island bar and about 300 yards east of Glenwood public wharf.

Shippigan Island.—A fixed red light, shown from an anchor lens lantern, at an elevation of 26 ft., has been established on the warehouse, on the outer end of the wharf, at Lamek, on the west coast.

North Atlantic Ocean.—The captain of the steam trawler Commandant-Roquigny reported passing a capsized wooden ship on Sept. 6 in lat. n. 44° 6' 0", long. w.

northerly from the outer end of the west pier to 675 ft. north of Government warehouse, to a least depth of 17 ft. for a width of 50 ft.; and the turning basin in the inner harbor to a least depth of 14 ft.

A steel cylindrical gas and bell buoy, painted in black and white vertical stripes, showing a white light, automatically occulted at short intervals, and with bell rung by motion of the waves, has been established on line of range about 3 miles from front range light at the entrance to Port Colborne.

Lake Huron.—W. W. Ransbury, Tobermory, reports the existence of a shoal in the main channel north of Cove Island. The locality will be examined by a Hydrographic Survey officer as soon as possible.

Lake Superior.—A diaphone fog alarm, operated by air compressed by an oil en-

Steel Cargo Steamship Volunda, approximately 2,800 d.w. tons, built by Nova Scotia Steel & Coal Co., for its coal and iron trade on the Atlantic coast and to and from Newfoundland.

90 ft. with square open wooden frame work with sloping sides.

Ragged Harbor.—A fixed white light on a red wooden stand has been established on White Point at the northwest entrance to Ragged Harbor. The light will only be in operation during open navigation.

Jacques Cartier Island.—A flashing white acetylene light, giving one flash of 0.3 sec. duration every 3 sec., has been established on the northeast point of Jacques Cartier Island (Noble Island), at the entrance to Quirpon harbor. The light is at an elevation of 78 ft., and has a white square wooden structure with sloping sides surmounted by a red lantern.

New Brunswick, Bay of Fundy.—The St. John harbor range lights on the west side will be discontinued without further notice. The fixed white light on the northeastern corner of freight shed 16 will be changed to red light.

Northumberland Strait.—Temporary range lights have been fixed at St. Louis gully, Kouchibouguac Bay.

A green spar buoy has been established on the channel side of an old wreck,

52° 12' 0".

A floating mine was sighted Oct. 2 in lat. n. 47° 53' long. 38° 5'.

Nova Scotia, Cape Breton Island.—The fixed white catoptric light on the summit of the middle of Sea Wolf Island at Margaree will be replaced by group occulting white lights of the second order, with the following characteristic:—light 6 sec, eclipse 3 sec, light 18 sec., eclipse 3 sec.

The group revolving white light on the summit of Henry Island, on the west coast, at the entrance to Port Hood, has been replaced by a flashing white catoptric light showing two flashes, with an interval of 7½ sec. between, every 30 seconds. For half the revolution, or 15 sec., the light will be totally eclipsed, and for the other half a fixed light of 500 c.p. will be visible, through which the flashes of 50,000 c.p. will show.

Ontario, Lake Erie.—The Dominion Public Works Department, during 1920, carried out the following dredging at Port Stanley,—the area between the entrance piers, the outer harbor, and in the car ferry slip to a least depth of 18 ft.; the channel between the piers running

gine, giving two blasts of 2 secs. duration every minute, has been established, in a white square wooden building, near the edge of the cliff, about 400 ft. west of the lighthouse at Otter Island.

An uncharted rock has been discovered almost midway between the southwest corner of Commercial pier and the outer end of the railway wharf, at Michipicoten harbor. The following sextant angles fix the position of the rock,—flag-staff on Clergue Island 0°; east tangent of west point 104° 40'; southwest tangent of ore dock 64° 05'; back range light (old position) 98° 35'.

Prince Edward Island.—The Public Works Department has dredged berths at Charlottetown as follows; between Queens wharf and Buntin and Bell's wharf, a berth 345 ft. long, 80 ft. wide at the outer end and narrowing to 50 ft. at the inner end, to a depth of 20 ft. at the outer end, grading up to 14 ft. at the inner end; on the east side of the wharf a berth 425 ft. long, averaging 50 ft. wide, has been dredged to a depth of 20 ft. in the outer half and 12 ft. in the inner half; at the C.N.R. wharf on the west side a berth 400 ft. long and 110 ft.

Atlantic and Pacific Ocean.

The Cunard Line reopened its steamship service between London and Canada, Oct. 6, with the sailing of the s.s. *Canonia* from London, Eng., for New York, calling at Halifax, N.S.

Elder Dempster & Co.'s s.s. *Chama*, outward bound to African ports, ran aground on Bellechasse Island, 15 miles below Quebec, Oct. 21. She was released subsequently by the s.s. *Lord Strathcona*, without material damage.

The Fracanda Line's s.s. *Georgie*, which ran ashore in the St. Lawrence River, shortly after leaving Quebec for Montreal, Oct. 21, was released the following day and put back to Quebec, where, it was stated, some slight repairs would be made.

The s.s. *Lagerfos*, which docked at Montreal late in September, under the management of the Walford Shipping Co., is stated to be the first direct steamship to Canada from Iceland. She carried 34 first class and 39 second class passengers, mostly for Winnipeg, and stated to be natives of Iceland.

The Icelandic Steamship Co. is reported to be arranging for the establishment of a direct steamship line between Iceland and Canada, with Montreal as the summer port and Halifax for the winter. It is proposed to operate two steamships in the service, and attempts are being made to interest the Dominion Government in the project.

Furness Withy & Co.'s report for the financial year ended Apr. 30, published recently, shows a profit of £1,004,821, to which has been added £120,583, brought forward, giving an available surplus of £1,125,404, compared with £873,083 for the previous year. Of this surplus, \$500,000 has been placed to depreciation, and \$452,500 is being paid in dividends on preference and ordinary stock, that on the ordinary stock being at the rate of 10% free of income tax. A balance of \$172,900 has been carried to the current year's accounts.

The s.s. *Kron Prinz Friedrich Wilhelm*, one of the German passenger steamships assigned to Great Britain, and loaned to Canadian Pacific Ocean Services for the purpose of deciding whether she could be suitably used in that company's service, has been returned to Great Britain as unsuitable. It is stated that although she was the largest passenger steamship which had come up the St. Lawrence, there were serious drawbacks. The third class accommodation planned on the German standard would have to be entirely remodelled to come up to the Canadian standard.

Maritime Provinces and Newfoundland.

The s.s. *Hugo Stinnes I*, which went ashore early in October, off Cape John, N.S., was refloated Oct. 6, and towed to Pictou for examination.

The *Maggie Belle* Shipping Co.'s share-holders met at St. John's, Nfld., Oct. 30, to receive and act on the report of the liquidator, G. Somerville.

The Reid Newfoundland Co. has restarted its Bonavista Bay steamship service, and added Bunyan's Cove as a calling place, instead of Broad's Cove, for its steamships *Charlottetown* and *Watchful*.

The suction dredge, which is owned and in use by the St. John Drydock &

Shipbuilding Co., on the Courtenay Bay development works at St. John, N.B., is the *Tornado*, not Toronto, as stated in Canadian Railway and Marine World for October.

The Dominion Public Works Department advised Canadian Railway and Marine World that plans and specifications had been prepared for the wharf at Sydney, N.S., for which \$100,000 was voted by the Dominion Parliament last session, and that tenders would probably be invited early in November.

The Minister of Customs and Inland Revenue, is reported to have stated at St. John, N.B., Oct. 7, that the extension of the Negro Point breakwater to Part-ridge Island would be commenced immediately and that an order had been issued for the transfer of stone from the site of the dry dock at Courtenay Bay, to protect any ships mooring at the new docks this winter.

The Reid Newfoundland Co.'s s.s. *Meigle* was drydocked at the company's plant at St. John's recently, for general over-

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Waller, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

haul and repairs, and for the extension of her first class passenger accommodation. It is stated that it is the intention to utilize her in the regular passenger and freight service between St. John's, Halifax and Sydney.

Two steam trawlers and three drifters sailed from Halifax, N.S., Oct. 10, for Inverness, Scotland, and, on Oct. 14, one of the trawlers returned to port and reported the loss of two of the drifters during heavy weather off the Cape Breton coast. She brought the crews of both the drifters with her, and reported that the other trawler, when last seen, was headed for Sydney with the third drifter in tow. These ships are a part of a number of similar ones built during the war in Canadian shipyards for war purposes, and which are now being utilized in the British fisheries.

The Newfoundland Government has confirmed a contract entered into by it with the Susu Shipping Co. last year, for the operation of the s.s. *Susu*, between St. John's, Catalina, Greenspond, Wesleyville, Outer Wadham Islands, Musgrave Harbor, Ladle Cove, Fredericton, Gander

Bay, Cat Harbor, Inner Wadham Islands, Peckfords, Carmanville, Main Point, Victoria Cove, Indian Island, Tilting Harbor, Joe Batt's Arm, Change Islands, Horwood's (Dog Bay), Seldom Come By and Fogo, Nfld., in the postal mail service, commencing May 1, to the close of navigation each year for seven years, for \$1,000 a month.

Province of Quebec Marine.

The water gauge at Montreal showed a depth of 28 ft. 9 in. in the St. Lawrence channel, Oct. 19, which is stated to be within an inch of the lowest mark ever reached.

Canada Steamship Lines' s.s. *Saguenay* ran ashore at Sillery Cove, near Quebec, Oct. 21, but refloated with high tide, without damage, and proceeded to Quebec.

A somewhat complicated suit respecting a steamship is in progress in the Quebec Admiralty Court, on claims against the s.s. *Maplecourt*, registered as owned by David Shipbuilding & Repairing Co. The history of the case commences with the purchase of the s.s. *North West* from the Northern Steamship Co., Buffalo, N.Y., and the cutting in two of the ship there, for the passage of the canals to Levis, where she was to be rejoined. It appears that the two parts of the ship were insured, on the understanding that if one of the sections became a loss, the full insurance was to be paid. One section did become a total loss, the other section arriving at Levis in safety, where a new section was added and she became the *Maplecourt*. Some seizures have been made on account of claims against the ship, and the matter has become greatly complicated.

Ontario and the Great Lakes.

The Great Lakes Transportation Co. will not moor a ship at Windsor, Ont., for hotel purposes, as stated in a recent press report. The company only operates freight ships.

Canada Steamship Lines' s.s. *Joyland*, which went ashore near Garden Island, opposite Kingston, early in October, with a cargo of grain for Montreal, was released by the Donnelly Wrecking & Salvage Co., Oct. 13, and proceeded to her destination.

The U.S. s.s. *Lakeport*, operating between Conneaut, Ohio, and Canadian ports, was tied up at Conneaut, recently, and the passports of the master, Capt. T. B. Greenway, taken away, and he was sent to Cleveland, Ohio, to appear on a charge of illegally transporting intoxicating liquors.

The Toronto Harbor Commissioners have deposited with the Public Works Department, Ottawa, a description of the site and plans of a breakwater to be built in Toronto harbor, extending northwesterly into Lake Ontario, from the westerly extremity of the northerly pier of the west entrance to Toronto Bay.

The new channel for down bound ships in the St. Clair River, which is being provided by the U.S. Government, will not, it is reported, be ready for the opening of navigation next spring, as was expected, but it is stated that every effort will be made to have it ready as early as possible, to accommodate the large increase of freight traffic which is anticipated next year.

The Steamship Julius Kessler Corpor-

The Royal Mail Steam Packet Co.'s Canada-West Indian Service.

Jno. Alsop, General Agent, R.M.S.P. Co., Halifax, N.S., is credited, in a press dispatch as having stated there recently that the company is losing \$15,000 to \$20,000 a trip on its Canada-West Indies service, and that if an increase in freight rates, for which it has applied to the Dominion Government, is not granted, it will have to discontinue the service. He attributes the loss to increased cost of operation, especially bunkering, and to a heavy slump in north bound freights from the West Indies.

The R.M.S.P. Co. operates the following steamships between Halifax and the West Indies, viz., Caraquet, Chaleur, Chaudiere, and Chignecto, for which it receives a subsidy from the Dominion Government, the estimates for the year ending Mar. 31, 1921, having the following item, among mail subsidies and steamship subventions: "Canada and West Indies, or South America, or both, \$340,666." Under the subsidy agreement, the freight rates are subject to the Dominion Government's approval, and the R.M.S.P. Co. has applied for authority to advance them.

In this connection Sir Geo. Foster, Minister of Trade and Commerce, is reported to have said at Ottawa on Oct. 21: "In consequence of the fact that the Canadian Government Merchant Marine has placed ships on the different routes connecting with the West Indies, which to some extent interferes with the freight carryings of the R.M.S.P. Co., especially on the northbound passage during the slackness of the sugar season, and the fact that the freight rates of this company have been controlled by the Government, and the company has not been free, therefore, to take advantage of the

greatly increased rates during the war and since, and also owing to the great increase in the price of coal, as well as ship commodities, the company has made application for an increase in freight rates, which is being considered by the Trade and Commerce Department, as also by the St. John, N.B., and Halifax, N.S., Boards of Trade."

Newfoundland Steamship Services.

Canadian Trade Commissioner W. B. Nicholson writes from St. John's, Nfld., as follows:—"Transportation was retarded during the year ended June 30 by the shortage of sea tonnage and the run down condition of the railway system, which had been overworked and under-repaired during the period of the war. The volume of freight carried by the Reid Newfoundland Co.'s railway and steamships far exceeded that of previous years.

"The steamship service with the outside world showed some improvement during the year. The Furness-Withy Co. resumed sailings between Liverpool, Halifax and St. John's, and return, and an excellent passenger and freight steamship has been put on the New York, Halifax and St. John's route by the Red Cross Line, while the Canadian Government Merchant Marine has established an efficient line of freight steamships on the Montreal-St. John's, Nfld., route, which calls at Gulf ports for freight offering, and the steamship Sable I., Farquhar & Co., performs a weekly passenger and freight service between North Sydney and St. John's. The Nova Scotia Steamship Co. has two steamships running between Boston, Halifax and St. John's. It is the intention of the latter company to put two passenger and freight steamships on this route next

season, accommodating about 200 passengers, and a steamship from Halifax to develop Canadian trade in flour and other Canadian manufactures on the west coast of Newfoundland. A. E. Hickman Co., St. John's, are agents for the Nova Scotia Steamship Co."

Removal of Shipping Offices from the U.S. to Canada.

London, Eng., Oct. 12.—Canada promises to benefit from some proposed discriminatory United States legislation, such as the Jones Shipping Act, and the reported taxation of the total profits of foreign companies with branches in the U.S. A director of George Wills & Sons, merchant shippers and London agents for the Holt Line, which is now putting on a new steamship service to the Far East in co-operation with the Canadian Government Merchant Marine, states that his company is considering transferring its office from New York to Montreal. This action is being taken partly because of the high costs in the U.S. ports and partly because of the discriminatory legislation referred to, although the director did not think that the latter would prove of any great benefit to the U.S. mercantile marine, which, in his opinion, is doomed to failure.—Copyright cable to Montreal Gazette.

The s.s. War Fundy, one of the war series of wooden steamships built in Canada for the British Government under orders from the Imperial Munitions Board, is reported to have been wrecked at Grundkelesgrund, in the Gulf of Bosnia, off the Adriatic, and to have become a total loss. She was built by Grant & Horne, St. John, N.B., had approximately 3,080 d.w. tons capacity, and was launched Aug. 24, 1918.

Ships Registered in Canada During July, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

Mainly About Marine People.

Great Lakes Levels.

John Burnley, formerly Assistant Engineer, has been appointed Master of the Steamship Co. of British Columbia. He was for some years with the Dominion Steamship Co. before it was taken over by the United Steamship Co. of British Columbia.

Sir Alfred Booth, Captain, Canadian Steamship Co., was in Quebec, Oct. 21, en route to New York, where he is expected to appear on the 24th. He expects considerable development in the Canadian steamship service for next year.

J. Chesley, Agent, Marine Department, St. John, N.B., is acting as Superintendent of Pilots, St. John pilotage district, for the present.

Lieut. Commander C. P. Edwards, General Superintendent, Radiotelegraph Branch, Naval Service Department, Ottawa, has been attending a meeting of representatives of Great Britain, the United States, France, Italy and Japan, in Washington, to discuss international wire and wireless communications.

R. S. Elworthy, General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Chicago, returned home early in October from Europe, after a business trip to the continent.

H. E. A. Hawken, heretofore Assistant Deputy Minister of Marine, has been appointed acting Deputy Minister of Marine, consequent on the resignation of Alex. Johnston. He was born Sept. 28, 1879, and entered the civil service Jan. 7, 1902, and prior to Mar. 31 was Chief Registrar of Shipping. On the latter date he was appointed acting Assistant Deputy Minister of Marine and Assistant Deputy Minister of Marine, in July.

Capt. Hose, R.N., acting Director, Canadian Naval Service, is reported to have been named as Director, Canadian Naval Service, effective Jan. 1, 1921, vice Admiral Sir Charles Kingsmill, R.N., at present on leave of absence, prior to retirement.

Alex. Johnston, Deputy Minister of Marine and Fisheries, is resigning from the Dominion Government's service, and it is said that he will enter the British Empire Steel Corporation's service, an Ottawa press dispatch stating that he will be General Assistant to the President, at a salary of \$18,000 a year. Canadian Railway and Marine World was advised, Oct. 25, that no definite conclusion had been reached as to the exact nature of the work he will undertake, that no consideration had been given to the question of title, that he will not enter on his new duties until Jan. 1, and that his headquarters had not been decided on, but that he will not be removing from Ottawa for the next year.

Major A. C. Lewis, formerly Secretary, Toronto Harbor Commission, and now Secretary, Canadian Deep Waterways & Power Association, has been nominated as the Conservative candidate at the ensuing by-election for the representation of Northeast Toronto in the Ontario Legislature.

Thos. Long, President Thos. Long & Co., general merchants, Collingwood Ont., at one time a director of the Northern Navigation Co. of Ontario, and a former President of the Collingwood Shipbuilding Co., died at his house in Toronto, Oct. 7, aged 84.

W. McLaurin, of the C.G.S. Stadacona,

Esquimalt, B.C., a returned soldier, has been appointed Dock Yard Foreman, Halifax Dockyard, N.S. Naval Service Department, at an initial salary of \$2,400 a year. Particulars of duties, classifications, etc., were given in Canadian Railway and Marine World for October, page 578.

Miss Hilda Murphy, daughter of the late Dennis Murphy, formerly President, Ottawa Transportation Co., was married at Ottawa, Oct. 24, to Lt. Col. K. M. Perry, D.S.O., son of Commissioner Perry of the Royal Canadian Mounted Police.

J. W. Norcross, President and Managing Director, Canada Steamship Lines Ltd., and Mrs. and Miss Helen Norcross, sailed from Quebec, Oct. 6, on the a.s. Empress of France, for England.

Thos. Robb, Manager, Shipping Federation of Canada, left Montreal at the end of October, to attend the first meeting of the advisory committee on maritime matters, of the League of Nations, at Geneva, Switzerland, Nov. 8.

Capt. John C. Shaw, master of the Dominion Government s.s. Sheba, died suddenly, Oct. 9, on board his ship, whilst en route from Levis, Que., to Sydney, N.S. He had been engaged in coast navigation for several years, and before entering the Dominion Government's service, was first officer of the s.s. Oruro, operated by Pickford & Black Ltd., to the West Indies.

Richard Welsford has been appointed Managing Director, Union Steamships Co. of British Columbia, Vancouver, B.C., succeeding E. H. Beazley, who lost his life recently in an aeroplane accident. He is a son of J. H. Welsford, of J. H. Welsford & Co., Liverpool, Eng., which firm controls the Union Steamship Co. of British Columbia, and he has been in that company's service for several years. He was in Vancouver recently, and returned to England, and will assume his new duties in Vancouver about Jan. 1, 1921.

Manchester Liners Ltd. report for the year ended June 30, shows that after providing for depreciation and all charges, including debenture interest, preference dividends, excess profits, corporation and income taxes, there is an amount available of £181,096, including £13,911 brought forward. Of this amount, £100,000 is placed to reserve, and a dividend of 15% free of tax paid on the ordinary shares, leaving £14,316 carried forward to this year's accounts.

The U.S. Emergency Fleet Corporation's office in Montreal will be closed at the end of the St. Lawrence navigation season. This office was opened during the war, for the accommodation of business connected with the passage of a number of steamships from the Great Lakes to the ocean. During the current year about 60 have passed out, and it is expected that two or three more will pass before the season closes.

U. S. Shipbuilding.—An enormous decrease has taken place in ship tonnage under construction in the U.S. during the last 18 months. At the end of May, 1919, 4,185,523 tons were actually building in the U.S., but by the end of September, 1920, that total was reduced by 58%.

British shipbuilders are reported to have offered to build tankers for the United States at \$157.50 a ton, which is said to be \$10 lower than a French offer, and \$32.50 lower than U.S. prices.

The U.S. Lake Survey reports the monthly mean stages of the Great Lakes for September, 1920, in feet above mean sea level, as follows:—Superior, 602.81; Michigan-Huron, 580.87; St. Clair, 575.44; Erie, 572.39; Ontario, 245.47.

Lake Superior was 0.12 ft. lower than August, 0.28 ft. higher than a year ago, 0.17 ft. above the average September stage of the last 10 years, 1.27 ft. below the high stage of Sept. 1869, and 1.32 ft. above the low stage of Sept., 1879.

Lakes Michigan and Huron were 0.14 ft. lower than August, 0.06 ft. higher than a year ago, 0.20 ft. above the average September stage of the last 10 years, 2.56 ft. below the high stage of Sept., 1876, and 1.21 ft. above the low stage of Sept., 1911. During the last 10 years the September level has averaged 0.2 ft. lower than the August level and 0.2 ft. higher than the October level.

Lake Erie was 0.26 ft. lower than August, 0.36 ft. lower than a year ago, 0.02 ft. below the average September stage of the last 10 years, 1.55 ft. below the high stage of Sept., 1876, and 1.11 ft. above the low stage of Sept., 1895. During the last 10 years the September level has averaged 0.2 ft. lower than the August level, and 0.3 ft. higher than the October level.

Lake Ontario was 0.15 ft. lower than August, 1.39 ft. lower than a year ago, 0.72 ft. below the average September stage of the last 10 years, 2.14 ft. below the high stage of Sept., 1862, and 1.47 ft. above the low stage of Sept., 1895. During the last 10 years the September level has averaged 0.4 ft. lower than the August level, and 0.4 ft. higher than the October level.

Increased Shipbuilding Costs in Britain.—The Westminster Gazette, in commenting upon the increased shipbuilding costs in Great Britain as a result of higher wage demands, pointed out recently that many order with British shipbuilders were being cancelled, and added: "Lord Weir has sized up the situation in the engineering line, and is rapidly developing his interests in Japan and Canada; while the action of the Yarrow's a considerable time ago showed even then how the wind was blowing, and is likely to continue to blow."

New Zealand Harbor Improvements.—Plans are well under way for the completion of wharves and sheds at Auckland, as well as the construction of three more wharves to meet the demands of the constantly increasing commerce of that city. Frequently the wharves are so badly congested that shipping must wait its turn. The Auckland Harbor Board has been authorized to place a loan of \$4,866,500 for the developments mentioned, and the chairman of the board has announced that work will be pushed as rapidly as possible.

H.M.S. Shearwater.—The Naval Service Department will receive tenders to November 10, for the purchase of H. M. S. Shearwater, now lying at Halifax, N. S. She was built in England in 1899, with steel hull, wood sheathed, and is fitted with single screw, two bladed propeller, triple expansion, convertible, surface condensing, reciprocating engines of 1,400 i.h.p., and 4 water tube Belleville boilers with a working pressure of 260 lb. Her dimensions are,—length 300 ft., beam 33 ft., draft 12.5 ft., displacement 980 tons.

Radiotelegraph and Other Electric Aids to Navigation.

As detailed in Canadian Railway and Marine World from time to time recently, the Dominion Naval Service Department's Radiotelegraph Branch has established several wireless telegraph direction finding stations which have been operated very successfully on the Atlantic coast and another one is being erected at St. John, N.B.

The U.S. Commerce Department's Navigation Bureau is studying the determination of ship location by radio signal. The system in use at present by the U.S. Navy employs radio compass stations on shore which measure the angle from which the signal is sent by the vessel to be located. By a system of triangulation two or more stations working together can determine the location of a vessel. The new system under test by the Department of Commerce reverses the operations by sending the signals from shore stations and doing the radio compass work aboard ship. Recent tests on this system are reported to have been very successful, but further investigation both as to apparatus and methods of manipulation are anticipated before any extensive application will be commended.

In connection with the radio location of ships the U.S. Navy Department has under consideration the establishment of a large number of additional radio compass stations. These will be placed along the western seaboard and on the Great Lakes. It is anticipated that they will find extensive use in directing the merchant marine, though they will be designed primarily for naval service. It is said that stations will be established on the Great Lakes at Detour, Grand Marais, Whitefish Point, Eagle Harbor, Thunder Bay Island, Wind Point or Grosse Point, and several other points.

A Paris cablegram says that the French Ministry of Marine has decided as soon as possible to lay down in all French ports and across the Channel, in collaboration with the British Admiralty, electric cables which will enable ships to steer safely into port in the densest fogs. The invention which is to be used is that of the French engineer, Loth, which, it appears from the account given at the Academy of Sciences by Admiral Fournier, resembles in its general principles that recently experimented with in America. An electric cable along which a current of alternative frequency is passed is submerged in the fairway. Secondary currents which such a cable induces at a distance are picked up by ship's instruments and, according to the distance of the sound, the pilot can judge whether he is in the middle or at the outskirts of the fairway. Even an aeroplane fitted with receiving instruments can follow the submerged cable, and the proposal is made that the sea cable should have an overland connection to the aerodromes, to enable pilots to steer through fog.

The United States Navy Department is reported to be completing a series of tests in New York harbor on a system using what is called a "radio piloting cable." This system was first tried by the Navy Department nearly a year ago but the first tests were not successful, due to damage of the cable by fishing operations. A new cable designed by the Radio Division of the Bureau of Engineering of the Navy Department has, however, proved successful and recent tests are reported to be exceedingly encouraging. The work requires a cable

energized by a low frequency alternating current laid along the center of the channel through which vessels are to be guided. The magnetic waves from this cable are picked up by any one of several types of receiving equipment aboard the ship and the pilot lays his course in accordance with the relative intensity of the signals from the right or the left receiving units. A full report upon this work will be available on completion of the present tests.

The Cunard Co.'s Canadian Services.

London, Eng., Oct. 13.—The Cunard Co. will probably supplement the partial service to Canada now being provided by the Saxonia and the Caronia with several of the 13 ships now under construction for the company. As the new ships will all be oil burners, of approximately 20,000 tons each, the Cunard Co. expects to become serious competitors of the Canadian Pacific Ocean Services. The sailings will be from London to Halifax and New York. The British offices of the Cunard Co. refuse to confirm the report that the company will put a passenger fleet on the Pacific Ocean to compete with the C.P.O.S. there, using the Canadian National Rys. across Canada.—Copyright cablegram to Montreal Gazette.

Francis King on the Proposed St. Lawrence River Improvements.

At a sitting of the International Joint Commission at Kingston, Ont., Oct. 11, Francis King, M.A., Chairman of the Kingston Board of Trade's marine committee, stated that, as General Counsel for the Dominion Marine Association, he had at Buffalo, N.Y., on Mar. 1 last, explained the attitude of Canadian ship owners towards the proposals so far as their position was indicated by the Association's records. They had made no declaration then and had made no declaration since on the question whether transportation would benefit by the adoption of the proposed scheme of improvement, but they had asked for some such plan as a solution of their difficulties in relation to power development. They had objected to the present system of parceling the river out to private individuals, and to corporations, with the result that navigation was imperilled and that the Government was in danger of losing control of the stream. Mr. King stated that the Association and mariners themselves recognize that power is a very important factor, and that the demand for more of its must be met soon. The Association therefore asked the Government for a scheme which would protect navigation interests and at the same time permit the development of power. To that extent the Association agreed on the proposals, and in spite of other differences among individuals, such as those engaged in freight and passenger traffic, those with ships of large size and those with ships which can already navigate the canals, those who have strong views on the non adaptability of lake ships for ocean trade, or ocean ships for lake trade, and those who believe a new type might develop or that transhipment would in any event take place at Montreal; in spite of these differences the Association believes that some scheme must be adopted, and the one before the Commission seems practical and might be decided upon.

Mr. King said the Association should

go farther, and suggested that if the change must come, dams and slack water lakes in the river would be preferable to canals. Speaking for Kingstonsians, he pointed out that in advocating the St. Lawrence waterway, on account of the need of power, they were quite unselfish, as when the Welland Canal deepening was proposed, it was felt that it would make the foot of Lake Ontario the end of deep water navigation and build up Kingston. With the deepening of the St. Lawrence this advantage would be gone, but they believed the good of the greatest number must be considered and must prevail.

Marine Public Works Contracts.

The Dominion Public Works Department has awarded the following contracts:—Repairs to checkwater pier, Cobourg, Ont., York Construction Co., Toronto, Sept. 15, schedule of rates. Repairs to public wharf, Owl's Head, N.S., Naugle & Hiltz, Lawrencetown, N.S., Sept. 14, schedule of prices. Dredging in deep water berths, St. John, N.B., J. A. Gregory, West St. John, N.B., Sept. 20, class B, 32c. a cu. yd. scow measure. Wharf, Thetis Island, B.C., Vancouver Pile Driving & Contracting Co., Vancouver, B.C., Sept. 15, schedule of prices. Reconstruction of superstructure of west pier, Pelee Island, Ont., Border Cities Construction Co., Windsor, Ont., Sept. 22, schedule of prices. Repairs to wharf, Campbell River, B.C., W. Greenlees, Vancouver, B.C., Sept. 23, schedule of prices. Construction of wharf, Lyall Harbor, B.C., Vancouver Pile Driving & Contracting Co., Vancouver, B.C., Sept. 23, schedule of prices. Renewal of wharf, Moresby Island, B.C., Vancouver Pile Driving & Contracting Co., Vancouver, B.C., Sept. 23, schedule of prices. Reconstruction of wharf, Owen Sound, Ont., E. Conroy, Peterborough, Ont., Sept. 27, schedule of prices. Ice breakwater, St. Joseph de Sorel, Que., A. Lacroix and H. Gravel, Montreal, Oct. 1, \$2,800. Public floating wharf, Princess Creek, B.C., F. Cogle and H. Perryheak, Proctor, B.C., Sept. 27, \$7,980. Reconstruction of 466 ft. of superstructure of east pier, eastern channel to Toronto harbor, Toronto, C. S. Boone Dredging & Construction Co., Toronto, Oct. 12, schedule of prices.

Wreck Commissioner's Enquiries and Judgments.

Investigations have been held and judgments delivered in connection with the following casualties:—

Stranding of s.s. Edward Pyke.

Held at Quebec, Oct. 7, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. Couette, as nautical assessors, in to the stranding of the steam tug Edward Pyke, near Pointe a Pizeau, Quebec harbor, Sept. 5, while towing the sailing ship Grand Duchesse Maria Nicolaeroe.

The court found that the master of the tug, Capt. A. Larsen, and the pilot, A. Arcand, failed to exercise the prudence required by their respective positions and responsibilities. The fact that the casualty was trivial in a monetary sense was no concern of the court, but on the principle involved the court held that the action of each of the parties brought the tug and her tow into danger, and ordered Capt. A. Larsen to pay the costs of the enquiry, and fined the pilot, A. Arcand, \$150, to be paid by Nov. 1. With respect to E. deVillers, pilot of the sail-

the ship, although his ship did not come to grief, he was severely injured, and sustained the loss of his right eye. From a humanitarian point of view, it was his duty to "warn his servant that he was running fifty miles an hour."

A note was placed in the court's file, stating that a very important point was brought out, viz., that each pilot was under the impression that he had the right-of-way to give or receive from the other, that each was racing for his own safety, and that neither one had any warning of the other. The court held this to be a serious and dangerous principle.

If this is indeed, as the court was informed, such a serious principle, and her tow, and the powers that be permit it, stringent instructions and regulations must necessarily be issued at once, in view of the foregoing, to prevent dual control, which can only be destructive of any policy, and dangerous to St. Lawrence navigation.

Trade and Supply Notes.

THE CANADIAN RAILWAY AND MARINE WORLD is pleased to announce that the following is a list of the names of the persons who have been elected to the various committees of the Canadian Railway and Marine Association. The names of the persons who have been elected to the various committees of the Canadian Railway and Marine Association are as follows: The names of the persons who have been elected to the various committees of the Canadian Railway and Marine Association are as follows: The names of the persons who have been elected to the various committees of the Canadian Railway and Marine Association are as follows: In other words, our reading columns are not for sale, either to advertisers or others.

The Parrett Co., with Canadian offices at Sydney and Halifax, N.S., St. John,

N.B., Montreal, Toronto, Winnipeg and Vancouver, has issued "Roof Fluting Machines, Details and Specifications," dealing with standard flutings, which are fully described and illustrated, many of the illustrations being in three part form.

Davis-Bournonville Co., Jersey City, N.J.:—"Autogenous Welding," this company's house organ, for October, deals further with the performance of its Pyrograph, in the fabrication of flange boiler plates, in shipyards. The setting up of portable welding equipment is also described and illustrated, step by step.

Davis-Bournonville Co., Jersey City, N.J. has issued a booklet of instructions for the use of the Radiograph, a portable machine for cutting to straight and curved lines, using grooved track to guide for straight cutting, and a radius bar and center point for circular cutting. The illustrations show cutting on oval opening in a marine boiler combustion chamber head, ship plate cutting and trimming a ship plate to a straight line.

Dominion Oxygen Co. has opened a charging plant at Hillcrest Park, Toronto, where a supply of Dominion oxygen, in loaned cylinders of standard sizes, will be carried at all times.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the members unless otherwise stated: American Association of Port Authorities—M. P. Parsons, Jr., 57 Common St., Montreal.

Canadian Railway Men's Educational Club—Meeting Tuesday, 5:30 p.m., F. A. Pinkston, Toronto, Ont.

Canadian Car Drivers' Bureau—W. J. Collins, Manager, 54 St. James Street, Montreal.

Canadian Railway Association—A. E. Brown, 14 Bond Street, Toronto.

Canadian Freight Association—Eastern Division—G. C. Brown, 104 St. James Street, Montreal.

Canadian Railway Club—W. A. Isaacs, 121 Chalmers St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 5:30 p.m., except June, July and August.

Canadian Traffic League—A. H. Thorpe, 25 Beaudry Ave., Toronto.

Canadian Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hogue, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—C. M. Strange, 4 Beaver Hall, Toronto.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Exporters' Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Offices, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.

Nagara Fronts' Summer Rate Committee—James McCreath, Montreal.

Quebec Transportation Club—A. F. Dion, Harbour Commissioners' Office, Quebec, Que.

Railway Association of Canada—C. P. Riddell, Montreal.

Supporter's Federation of Canada—The Robb Manner, 42 St. Sacrament Street, Montreal.

Transportation Club of Toronto—W. A. Gray, 27 Beaver Hall, Toronto.

Transportation Club of Vancouver—C. E. Hiley, Travelling Passenger Agent, Canadian Pacific Ocean Services Ltd., Vancouver, B.C.

How to Heat Railway Buildings Economically.

By R. H. Black, Engineer, Power Plant Construction, Grand Trunk Railway, Montreal.

Heating systems in railway buildings often compare unfavorably with those used in buildings owned by private industrial concerns, the reason being that railways usually make their own installations, and the men employed are not always heating tradesmen, but are picked up from other departments and are not primarily interested in heating work. What they know has been learned from actual contact with other railway heating plants so that obsolete practice has a strong tendency to be perpetuated. What is mostly needed is a campaign of education, and any railway contemplating extensive improvement in its heating systems would be well advised to study this problem from the start.

It is sometimes claimed that the use of steam traps and other devices is impracticable, as they need too much care and attention. It will always be found, however, where such has been the case, that the trouble lies in the want of care in choosing the right article or in properly protecting it from dirt and scale, or, more often still, in neglecting to give the very small amount of attention which is needed periodically by all mechanism, no matter how simple. When it is realized that the modern air brake is far more complicated than the most elaborate heating system, it will be conceded that there is no valid reason why the latter should give any trouble in the hands of the mechanics who are available at shops, and locomotive houses, provided they are given the necessary instructions. It is the intention of this paper to recommend a standard practice in designing new heating plants, and in remodelling those that are inefficient or out of date. In so doing it is not sufficient to decide on a system that will be efficient if correctly operated, but to consider what chance it has of being correctly operated, or if it would not be better to make some sacrifices in certain directions rather than take a chance on personal equations that are beyond control. For instance, it is needless to state that it is quite impossible to depend on anyone turning radiators on or off, with a view to economy, unless he is paying for the coal. It simply is not done, and no number of circular letters or printed instructions will ever make any difference. It therefore remains to control the heat at its source, to make one man responsible, to make the system as automatic as may be, or to so arrange it that it is to somebody's personal advantage or comfort that economy be observed. Also to pay the greatest attention to details, particularly in regard to protection from dirt, and external injury, and from being tampered with by unauthorized persons, and to arrange that waste becomes visible. It is with the above ideas in mind that the following recommendations and suggestions are made, being followed out from the beginning and incorporated in the design.

The Choice of a New System.—A heating system in its simplest form consists

of a series of stoves placed in different rooms, and these are fairly economical, the possibilities of waste lying in the overheating of the premises (usually only occasional) and the throwing out of unburnt fuel with the ashes. This latter may be serious, but can only be due to carelessness on the part of the attendant and the remedy is obvious. Almost as simple is the Baker heater, which is often available when released from old cars, and works very well in a small building, where not more than one heater is required. These two methods of heating are, everything considered, most economical for the smallest of passenger stations and small buildings, or sheds at a considerable distance from other buildings, and where they can be attended by baggage men, or other employees, in the course of their ordinary duties.

For stations of from 1,500 to 7,500 sq. ft. total floor area, which embrace the majority of ordinary stations, a hot water heating system should be used, with cast iron radiators, and sectional cast iron boiler, burning hard coal and placed preferably in a basement. In the smaller sizes, a hot water heating system is better than a steam system, in many ways, although its first cost is about 35% more. The large volume of water in circulation acts as an ideal heat storage, giving up heat when fire is low and storing heat when the fire is bright, thus preventing to a large extent the losses due to overheating of the rooms, and calling for less attention to the furnace. Any man with a furnace in his home will know how to run such a system economically and will usually do so, if for no other reason than to save himself trouble.

When we come to a larger station, such as is found at a division point, which is usually of two stories, with offices above, and sometimes a number of buildings arranged in a row, the hot water system may offer increased cost, and construction difficulties which make it advisable to use a steam heating system. In most respects the one pipe gravity steam system with boiler in basement using hard coal or other suitable fuel is the most economical steam heating system that can be adopted, and it is certainly the simplest. There is no possibility of waste of either hot water or steam when the proper air valves are used. Not only the radiators, but the boiler and piping themselves supply heat to the building, and need only be covered when they are likely to give out more heat than is required in the immediate vicinity. Long horizontal mains also need covering to avoid excessive condensation.

The system has the inherent disadvantage that the radiators must be either on or off. However, with the boiler on the premises, and the attendant firing it to suit fluctuating weather conditions, what actually happens is that the radiators are alternately heating and cooling, as not sufficient steam is made to heat them all the time, and this prevents over-

heating the rooms. To take advantage of this feature it is most important to so arrange the piping that the colder rooms and more exposed portions of the building are given the preference by receiving their steam first. Otherwise, it will be found necessary to overheat one portion of the building in order to adequately heat another. With this attended to, it will be found that the system will work well for two or three buildings which are not more than 100 ft. apart and which have good basements, but under certain circumstances, where there is a great difference in exposure, or in distance from boiler to radiators, it will be necessary to use special air valves on each radiator and connect them all to a small air pump, or ejector through a system of piping, which, however, need only be very small. This is known as the air line system and has many recommendations, but is usually an unnecessary refinement for railway buildings. In designing a one pipe heating system, proper size of piping, proper grading, and provision for expansion, and care in placing the radiators, are the points on which the success of the installation depends.

We now come to the first condition in which there is a really serious opportunity for waste. A station, office, or small shop has to be heated, and as a supply of high pressure steam is available a short distance away at, say, the locomotive house, it is proposed to use this. Now it is usually not economical to do so. To begin with, there is the loss of heat in the underground pipe supplying the building. With the very best construction this will be about 1% per 100 ft., but if the pipe is merely buried in sand, or set in a wooden boxing, the loss may be as much as 10% or more. The condensed steam, instead of draining back to the boiler direct, must be separated by means of a steam trap. Certain of these steam traps will then return the condensation direct to the high pressure boiler with very little loss, but these traps need careful attention, as with a none pipe system, should the trap stop working, the system will rapidly fill with water, and it will take some time to get it working again.

The greatest loss, however, is due to the imperfections of human nature. With an unlimited supply of steam from a distant point it will always be found that the building is overheated, and doors and windows left open, even in very cold weather. In fact, radiators are rarely, and in some cases never, shut off. One has only to imagine what his coal bill would be if he were to keep his furnace at home going full blast, from October to May, to realize what this means. It may be argued that the agent or officer in charge should not permit this condition, but a second thought will show that this is one of all duties that can and will be neglected. The only practical way to control the heating of buildings is at the source of heat, and if the baggage man or other employee has to at-

and the furnace, in addition to the other systems, will back the steam back to the boiler, and thus the pressure, when the steam returns to the boiler, is not of high pressure. It is possible that these traps, the use of the intermediate pipes and valves, may be used to control the flow of steam back to the boiler, and also to allow the steam to flow to the boiler, and thus the pressure, when the steam returns to the boiler, is not of high pressure. It is possible that these traps, the use of the intermediate pipes and valves, may be used to control the flow of steam back to the boiler, and also to allow the steam to flow to the boiler, and thus the pressure, when the steam returns to the boiler, is not of high pressure.

It is possible that these traps, the use of the intermediate pipes and valves, may be used to control the flow of steam back to the boiler, and also to allow the steam to flow to the boiler, and thus the pressure, when the steam returns to the boiler, is not of high pressure.

When the building is very small, requiring only one or two coils or radiators, and is used by a number of men continually coming in and out. A switch shanty is a good example. There is no one to attend to a stove and the steam will not amount to much. In this case pipe coils may be used, with a small steam trap on each coil, properly protected from sediment by a dirt trap or dirt pocket (a separator off a freight car is a good thing to use, and can often be obtained from stores.) The trap should have no by-pass and should be non-adjustable, except by taking it apart. Run condensation back to the boiler room, if not more than 200 ft. away, otherwise let it drip outside, where it can be seen. A reducing valve is not necessary, no great care need be taken in grading pipes, and as the steam is at high temperature only a small coil is required. (2) When it is intended to heat an existing building, and there is no basement, or convenient place for a boiler, or when the building is quite large, over 15,000 sq. ft. floor area, and two or more stories, such as large stations or freight sheds, or two or more buildings some distance apart. In this case the one piping gravity system is no longer the best to employ.

We come now to the two pipe vacuum system. On the return end of every radiator is placed a small steam trap, the discharge of which is led back through a separate arrangement of piping to a vacuum pump, which maintains a vacuum up to the outlet from every radiator. This means that all condensation is positively removed, and should the steam pressure at a remote part of the system be so low that the steam cannot flow into the radiator by itself, the trap, being cold, will remain open until the vacuum has drawn the steam in. Radiator traps should be thermostatic in principle and absolutely non-adjustable. Such a system is operated on a very low pressure, 1 to 4 lb. being sufficient in any well designed plant. Its advantages are many, for besides the positive circulation, which overcomes all troubles due to long distance and low pressure, it gives a low temperature radiator (an important point in economy, as it will not readily cause overheating), and also by using special inlet valves, with graduated opening, the so-called modulating system is obtained, which allows the heat in individual radiators to be controlled. This is a convenience, but, as pointed out before, little economy can be expected therefrom, and modulating valves are only justified in the better grade of office. The use of traps on every radiator safeguards the system from serious interruption, as the failure of a single trap only affects its own radiator, or at most those nearby, whereas the failure of a trap controlling the whole system may result in water-logging the system for hours. The vacuum system is not quite perfect, as it cannot be controlled from a central point.

It can be made automatic to operate with thermostats, but these are very expensive, and a radiator, and need constant attention, so that its greatest claims to economy are its low temperature and absence of leakage.

It is very necessary in designing the building to make provision for easy access to the heating pipes. If a proper basement is not provided, there should be at least 4 ft. of open space between the floor joists and the ground, or, where mastic or tile flooring is used, ample pipe trenches should be provided, which can be reached without destroying the floor. The writer knows of a new station that has all the steam heating pipes buried in the sand beneath a terrace floor. The piping will last for many years, but some of it will have to be renewed sooner or later, and at any time a leak may develop, which will necessitate the destruction of a large part of the flooring.

In providing water for wash basins a separate jacket heater, or small boiler, using hard coal, is much to be preferred to a heating coil in the main boiler, and owing to the fact that hot water constantly renewed is extremely corrosive it is desirable to use brass pipe and fittings. Because of the expense, extra heavy galvanized iron pipe is sometimes substituted, but even this will give trouble in time.

Locomotive house heating is a problem in itself and a very difficult one in this climate. It is well recognized that the hot blast system, in which a fan, driven by mechanical power, draws air through a nest of steam pipes, or cast iron sections, and discharges it through ducts to different points, usually the locomotive pits, is the most satisfactory system that can be used. It is not always recognized, however, what an enormous amount of steam is required to run these plants, and they are therefore often made much too large for the boiler capacity provided. Incorporated with a vacuum system to heat the offices, the best way to remove the condensation from the blast coils is by connecting it to the same system, using a large size thermostatic trap on every coil. The fan should be engine driven, as this permits the widest variation in speed, the exhaust steam being used in the coils.

Handling locomotives in winter is such a difficult matter that the most enthusiastic economist cannot justify fuel saving at the expense of cutting down the heat or reducing the ventilation in the locomotive house. The only justifiable saving is that which prevents waste of condensation or steam. In designing the air ducts it should be borne in mind that the speed of the air can be much increased over standard practice and therefore the ducts may be made smaller. As these are usually most unwieldy, at the large end, whether placed overhead or underground, this is a point worth remembering.

Heating Shops.—It is scarcely within the scope of this paper to discuss the heating of very large shops. It may be stated, however, that the writer favors forced circulation hot water, in wall radiators combined in the larger buildings with the hot blast system of hot air heating using live steam in the heating elements. The generation of electricity by steam power and the use of the exhaust steam as a by-product in the heating system, is justified only when the alternative is the purchase of power from steam driven central stations, and is not justified where (as is usually the case in Can-

ada) power can be obtained from hydro electric development.

The approach is made that compressed air should be produced by steam driven machines, the exhaust being used for heating in winter and for generating about 25% of the electric requirements in summer, by means of a mixed pressure turbine, the same turbine in winter using live steam, and exhausting into the heating system. Such an arrangement will require no increase in boiler capacity over heating requirements alone, would appear to offer a reasonable saving in power cost, and would provide a very valuable insurance against a complete shut down in the event of trouble with the external supply.

The provision of the correct amount of radiation or heat supply has an important bearing on economy. In this climate it is necessary to somewhat increase the usual allowance taken as correct for the Eastern States, viz., 70° room temperature, with an outside temperature of zero. For Eastern Canada 70°, at 5 below zero, is about right. This will give a temperature of about 60° at 20 below zero. The above is for offices. For stations and shops the following is recommended:

Station waiting rooms, 65° at zero; machine, and erecting shops, 60° at zero; forge and blacksmith shops, 50° at zero (when not working); paint and varnish shops, 65° at zero, with an additional section to maintain this temperature down to 20° below zero; locomotive house, 60° at zero, based on one air change per hour.

Remodelling Existing Systems.—We often find a boiler or boilers supplying steam to a system of pipe coils, the coils having valves at each end. The inlet valve is wide open, the discharge valve is supposed to be just cracked, discharging the condensation and also enough steam to make sure of it. The resulting steam and water are discharged into a so-called hot well, a wood or concrete tank placed underground, and the hot water is pumped back into the boilers. Not so uneconomical on the face of it, but let us see what is really happening. Some of the coils are discharging steam full bore, for someone feels cold and wants all the heat he can get. Cold water is entering the hot well, to make up the waste, and as the float valve is out of order (for who can get in and fix it?) it is overflowing to the sewer, after being heated to boiling point by the steam from the heating system. The feed water is hot, there is no steam to be seen anywhere and no evidence of waste, unless the singing of the steam through the coils means anything.

There are a great many such plants still in use. Now what is the remedy? To place a steam trap on the discharge to the hot well may answer, but usually does not. The pipes do not slope in the direction of flow, as they should, they sag and slope the wrong way, and although they worked when there was a current of steam blowing out the water all the time, they will fill with water, and stop the circulation if the pressure at the outlet is retained by means of a trap. Usually such a system can be made to work economically by putting a steam trap on each radiator. These may be thermostatic or float, but unlike vacuum traps, they will be required to withstand a pressure of as much as 25 lb. and must be chosen accordingly. A reducing valve on the steam line should limit the pressure to this, or less if possible, but it may be necessary to put in

extra radiators to make up for the reduced temperature due to the lower pressure. Unless the hot well is used as a storage for boiler washing, it should be discarded and an open type feed water heater used. The returns from the heating system should return into this and will then be pumped direct to the boilers without loss of heat. Steam traps which return the condensation direct to the boiler use much less steam than a pump, and should be used when all the steam from the boilers is used in the heating system, but where much cold water has to be used as feed, the pump exhaust can be used to heat it, and a pump is then as good as a trap and will usually be favored as being more easily understood. The overflow from the hot well, where such must be used, should run over a weir, where it can be seen and heard and a proper ball valve must regulate the supply of cold water, but should be placed in a little pit beside the hot well where it can be reached.

Another type of obsolete system is a two pipe vacuum system, using exhaust steam from engine or pumps, but with no traps on the radiators, and none of the refinements necessary to a good job. The back pressure on the engine is 10 or 12 lb., the pipes and coils are partly choked with oil from the exhaust steam, and as the steam is short circuiting through the nearer radiators, the more distant ones are difficult to heat.

The installation of radiator traps and some slight alteration to the piping will usually make quite a good vacuum system. The oil troubles can be prevented by means of an oil separator and the surplus steam relieved by a back pressure valve.

It is necessary to make special provision when using live steam that it shall not escape through the back pressure valve. A gate valve should be placed in the line, to isolate this valve and the feed water heater, when live steam is being used, a safety valve protecting the heating main from over pressure. This is a somewhat unusual arrangement, but is considered important.

The trouble with badly graded piping that cannot be readily changed may often be overcome by trapping it at the low points.

After an efficient vacuum system has been installed, there is a great temptation to turn the discharge from high pressure steam traps or even open drains from steam hammers into the vacuum line. This must on no account be done, as the temperature of the water leaving a high pressure line is around 100° hotter than the temperature of the vacuum line and enough water will flash into steam to kill the vacuum.

If it is necessary to install additional radiators and no vacuum traps are on hand, their returns should be kept open until such traps can be obtained.

If a remodelled system, using live steam at 25 lb. pressure exists at the far end of a low pressure vacuum system, which is often the case, and it is too costly to run a separate return back to the boiler, it may connect into the vacuum line, with a spray of cold water supplied by a 1/4 in. pipe to condense the steam.

One pipe heating system, supplied with steam from a distance, and discharging their returns to the sewer through a partly open valve are fairly common, and are rather difficult to handle. A continuous discharge trap of the float pattern, or better still, two connected in parallel, well protected by large sedi-

ment pockets, are the best that can be used for this service. If the system fails to heat properly with the traps in service, which is quite possible, the trouble must be looked for in badly graded piping or too small piping. This is particularly liable to happen where the risers drain back into the steam main instead of into a separate return.

The next system is one in which the exhaust steam and perhaps some live steam is discharged to the hot well, and steam driven pumps are used to circulate the hot water through pipe coils or radiators in the various buildings. A splendid system in principle, it has gained a very bad reputation through poor design and inattention to detail.

Badly proportioned piping causes short circuiting of the water and consequent unequal heating of the coils. Insufficient surface and low temperature gives inadequate heat supply.

Oil from the exhaust steam mixed with pipe scale chokes the piping badly, and corrosion, due to air liberated from a continual change of water, eats holes in the pipe in a few months.

Properly proportioned the heating is perfect. With centrifugal pumps forcing water through closed heaters, there is no trouble with oil, scale or corrosion. Piping is much smaller than with steam, the multiplicity of radiator traps is dispensed with, and all the advantages of thermal storage and control of heat at its source, as claimed for the gravity hot water system, are retained. The system is applicable to the most remote buildings, in fact it shows to greatest advantage thus and is particularly adaptable for exhaust steam. For large shops spread over considerable area, its first cost is slightly less than that of a vacuum system. In this system, as in every other, hot water supplied to wash basins and for other purposes (including boiler feeding) must be supplied by a separate system entirely.

Now let us take a typical case and see what can be saved by reconstruction along the above lines. A locomotive house of 30 stalls built many years ago, but in good condition and fairly modern as regards locomotive facilities, may nevertheless have any or all of the following defects with their corresponding preventable waste of fuel, the figures given being tons per year:—

Due to bare blower line	127
Due to obsolete steam driven compressor	163
Due to leakage of steam and loss of condensation from heating system in offices and stores	50
Due to feed water taken from hot well at a temperature of 130°, instead of heated to 210°	140
Due to badly insulated underground piping	25
Due to excessive back pressure on exhaust steam mains owing to absence of traps on locomotive house heating system	87
Total	592

When locomotive type boilers are used—
Waste due to lower efficiency than return tubular boilers 100 || Waste due to use of steam blowers for draft where same are used continually | 200 |

Total
300

Where other buildings are heated the following preventable losses occur:
Due to loss of condensation, 25% above proper requirements, when boiler pressure is used, and 15% when boiler pressure is reduced to 10 lb.
Due to leakage, owing to absence of traps on radiators, 7 to 10% above proper heating requirements, probable average 10%.

The preventable loss from underground steam mains, at present buried in a wood box, without any drainings or insulation, amount to from 5 to 10 tons a year per 100 ft. of pipe.

Proposed Devices for Improving Steam Economy at Locomotive House.

Open type feed water heater.—Heating boiler feed to 210° F.

Oil separator on exhaust main.—Keep heating system at full efficiency by preventing it choking with oil and scale.

Back pressure valve on exhaust main. Regulate back pressure to minimum necessary.

Vacuum traps on pipe coils or fan coils.—Ensure even heating, full value from exhaust steam and minimum back pressure.

Magnesia or sponge felt covering on high pressure steam pipes.—Reduce condensation to a minimum and provide a durable covering, reduce corrosion.

Asbestocel covering on low pressure and heating pipes.—Assist steam circulation in heating system and provide durable covering which will prevent corrosion.

Reducing valves (properly protected by dirt traps) on live steam heating system.—Provide maximum efficiency and reduce possible loss due to radiation and leakage.

Steam traps and return pipes on live steam heating system.—Prevent loss of steam and return condensation either direct to boiler or to feed water heater according to circumstances.

Float valves, readily accessible in hot wells, and visible hot well overflow.—Prevent great loss due to hot water passing from hot wells unnoticed.

Underground steam conduit properly drained.—Prevent loss of heat due to heating the ground and melting snow.

Replace shop engine with electric motor wherever possible.—Eliminate this wasteful use of steam.

Replace present obsolete compressor with new machine, either steam or electric driven.—Old single stage compressor is inefficient as a compressor and as steam engine. Can save half of fuel it requires.

The replacement of locomotive type boilers can scarcely be justified at some points. It is doubtful whether these boilers are particularly inefficient, when provided with good chimney draft and not forced above 70 boiler h.p., that is half the power of a standard return tube boiler. When provided with poor draft, and where forced by means of steam jets, they waste enormous quantities of fuel and should be replaced as soon as possible.

Underground piping may be protected in various ways, but any really good method is very expensive and needs the most careful workmanship and supervision while being installed. For long distances with steam pipes of from 2 1/2 in. to 10 in. and return pipes half the size, the split tile steam conduit cannot be beaten, when proper attention is paid to grading and drainage. It cannot be used under tracks, unless protected by concrete walls or cast iron pipe. For distances of less than 200 ft. a concrete trench, with double board top screwed down to cleats set into the concrete, may be used to advantage. The pipe covering should be sponge felt, or diatomaceous material; magnesia is too fragile. For piping above 10 in. or where several pipes are to be run, a tunnel should be considered. For pipes smaller than 2 1/2 in. and distances of not more than 300 ft., it is permissible to use a wooden boxing, if the ground is dry, as the loss in heat will cost less than the interest on the cost of the more expensive construction. If the ground is wet, the pipe had better be carried overhead, or, if this is impossible, it may be cased in an outer pipe which will just fit over the covering the outer pipe being well covered with a mixture of pitch and sand.

house of Material. A few traps have been made of brass, but these are not used in the same way as the traps made of iron. The traps made of iron are of two types, one of which is the standard type, and the other is the special make. There are at least four different manufacturers of each type sug-

1. Steam traps, stationary pattern. These are of two types, one of which is the standard type, and the other is the special make. There are at least four different manufacturers of each type sug-

For locomotive house blower lines place a 1/2 in. trap every 12 pits. For underground conduit use a 1/2 in. trap every 12 pits. For a 1/2 in. trap to connect main steam header, on a battery of two or three boilers of 150-200 h.p. each.

Low pressure, draining one pipe heating systems, or heating mains. Use continuous discharge float type, easy accessibility of interior and integral by-pass and sediment traps are an advantage. Specify size and working pressure. One 3/4 in. trap will serve 800 sq. ft. of radiation; one 1 in. or two 3/4 in. traps will serve 1,600 sq. ft. of radiation; one 1 1/4 in. or two 1 in. traps will serve 2,800 sq. ft. of radiation; one 1 1/2 in. or two 1 1/4 in. traps will serve 5,000 sq. ft. of radiation.

2. Steam traps, tilting pattern. Direct return trap, placed on top of boiler and discharging into it directly.

Three valve lifting trap, raises low pressure condensate from heating system into direct return trap or storage tank.

Non-return trap may take the place of an ordinary trap when very large capacity is required.

These traps vary greatly in price, the cheaper patterns need greater attention, but may give good satisfaction. The sediment trap and necessary check valves are not included and must be ordered specially. Give size and working pressure and all possible information on proposed arrangement as manufacturers should guarantee the installation.

A 1/2 in. trap will serve 1,000 sq. ft. of radiation. A 3/4 in. trap will serve 1,600 sq. ft. of radiation. A 1 in. trap will serve 2,800 sq. ft. of radiation. A 1 1/4 in. trap will serve 5,000 sq. ft. of radiation.

3. Radiator traps. Vacuum system. Use traps working on the thermostatic principle, which are non-adjustable. They should be guaranteed to operate under a maximum pressure of not less than 10 lb. and a higher pressure is often a great advantage.

Medium pressure. These should be similar to the foregoing, but guaranteed for a maximum working pressure of not less than 25 lb.

High pressure, should be as above, and guaranteed for a maximum pressure of 100 lb. A certain make of float trap, having a plain floating ball, may also be used to advantage in this and the foregoing type. As the smallest radiator traps are about 100 sq. ft. radiation capacity, it is rarely necessary to use any larger.

4. Vacuum pumps, if steam driven, should be fitted with a mechanical forced lubricator. Very small hydrostatic lubricators are unsatisfactory. Vacuum pumps are of two types, one of which is the standard type, and the other is the special make. There are at least four different manufacturers of each type sug-

cient for 25,000 sq. ft. of radiation.

Pressure pumps, if steam driven, should be fitted with a mechanical forced lubricator. Very small hydrostatic lubricators are unsatisfactory. Vacuum pumps are of two types, one of which is the standard type, and the other is the special make. There are at least four different manufacturers of each type sug-

6. Air vents, or air valves, for use on steam radiators, should work on the syphon principle having a floating member. Thermostatic valves are liable to cause flooding.

Trap capacities are given in terms of normal radiation, i.e., cast iron radiators with a room temperature of 70 deg.

Recommended Practice for New Heating Plants.

Wayside station and small buildings: Stoves or Baker heaters.

Station 1,500 to 7,500 sq. ft. floor area: Gravity hot water heating system with cast iron boiler and hard coal.

Other buildings 7,500 to 13,000 sq. ft. floor area: 1 pipe gravity steam heating system with cast iron boiler burning hard coal.

Stations to where high pressure steam must be supplied for heating coaches: 1 pipe boiler return trap system, with boiler in basement or 2 pipe vacuum system with boiler at a distance.

Stations, hotels or large exposed buildings 11,000 to 15,000 sq. ft.: 1 pipe gravity steam system, with vacuum air line and down draft boiler using soft coal.

Stations, hotels or large exposed buildings 11,000 to 15,000, located near power plant: 2 pipe vacuum system, using steam from power plant.

Small and medium sized shops: 2 pipe vacuum system, or forced circulation hot water system, using wall radiators.

Large shops: Forced circulation hot water, and live steam fan coils.

Locomotive houses: Live or exhaust steam, or both, in fan coils and wall radiators, in machine shop and offices.

Recommended Practice for Remodelling Heating Plants.

(1) High pressure two pipe system. Reduce pressure as low as possible, 15 to 25 lb., using a trap on each radiator. Return condensation direct to boiler by means of tilting traps, if steam is used only in heating system. If steam is used for other purposes, use open feed water heater and boiler feed pump.

(2) Two pipe vacuum system using exhaust steam. Use thermostatic trap and sediment pocket on each coil. Install oil separator, back pressure valve and reducing valve, so arranged that live steam through reducing valve does not reach feed water heater or back pressure valve. Place thermostatic traps on low points in heating main and cover heating mains if these are too small.

(3) One pipe heating system low pressure, supplied from a distance. Discharge condensation to return line, through two continuous discharge traps in parallel, well protected by sediment pockets, or use boiler return traps, if these can be arranged in boiler room.

(4) Forced circulation hot water system. Install closed water heaters and operate a "closed" system, using the same water in circulation indefinitely. Install separate system for wash basin and bath supply, using extra heavy galvanized pipe (brass pipe is used in hotels and offices) as a fresh supply of hot water is very corrosive.

The foregoing paper was read before the Canadian Railway Club recently.

Lake Superior Corporation's Subsidiary Railways.

The Lake Superior Corporation's report, for the three months ended Sept. 30, has the following references to its subsidiary railways:

Algoma Central & Hudson Bay Ry.—The President of the Railway company reports that the results for the first three months of the fiscal year show a gratifying improvement. The recent increase in freight rates granted by the Board of Railway Commissioners, although accompanied by a raise in wages, has improved the situation. It is expected that the earnings for the year will show a gratifying improvement.

Algoma Eastern Ry.—Operating results for the three months have been highly satisfactory. Traffic conditions are expected to continue favorable. The increased freight rates, effective Sept. 13, will increase operating revenue materially. The railway goes into the winter with track and equipment in good condition.

The C.P.R. not to be Nationalized.

The Prime Minister, Right Hon. Arthur Meighen, in speaking at Calgary, Alta., Nov. 9, after referring to the nationalization of the Canadian Northern, Grand Trunk Pacific and Grand Trunk Railways, is reported to have said:—"We are asked as to the future. We are asked if we are to embark still further upon the sea of nationalization, whether, in short, it is our policy to bring all the railways of the country under public ownership and control. Let me say that such is not our intention. The C.P.R., an institution which does credit to this country, constitutes a great rival, a necessary rival, as well as a model upon which we can fashion the national lines. And until such time as the Canadian National Rys. can be brought to the splendid efficiency of the C.P.R. and for the present, because of circumstances over which we have no control, that is impossible, the Government has no intention of interfering with the C.P.R."

Sir Alexander Galt and Railways.—In the "Life and Times of Sir Alexander Tilloch Galt, sometime Dominion Finance Minister, by O. D. Skelton, published recently, it is stated that for many years Sir Alexander was actively connected with railway construction, especially during the railway boom of the fifties, being associated as a contractor with Sir David Macpherson and Sir Casimir Gzowski, and in later years he played a conspicuous part in the developing of the northwest along with his son Elliot T. Galt, through the Alberta Ry. & Coal Co., afterwards changed to the Alberta Ry. & Irrigation Co., which built the railway from Dunmore Jet to Lethbridge, Alta., with some short branches, and also from Lethbridge to Great Falls, Montana.

Italian Railway Rates Increased.—A Rome press dispatch says that a royal decree has been issued increasing passenger rates on steam and electric railways from a maximum of 180% to a minimum of 100% over pre-war charges. On street cars the raise in fare in day time will be from 6c. to 9c. A ride on a street car at night, therefore, now costs 50% more than a ride in a cab prior to the war.

The Upkeep of Freight Car Equipment.

By J. W. Senger, Superintendent of Rolling Stock, New York Central Railroad (Lines West), Cleveland, Ohio.

This subject is one of vital importance and all of its phases cannot be fully covered with a paper of this kind. Therefore only a few of the most important subjects are presented for your consideration. Those who are directly connected with and responsible for upkeep, care and maintenance can best appreciate the difficulties experienced in passing through the period of the war. At present, during the reconstruction period, due to the shortage of labor and material, and the increased traffic that is moving, and the scarcity of freight equipment, we are facing perhaps a bigger problem than the one with which we had to contend during the great conflict for the period mentioned. During the past three or four years a limited amount of freight equipment having been purchased, it is necessary to maintain equipment that in normal times would have been retired. Therefore, in order to bring this subject before you the writer has confined himself to the most important parts and divided the subject as follows: Facilities, material, organization and repairs.

Facilities are the most important in car repairs, next to labor, up to date shops equipped with modern machinery and labor saving devices. Being limited to taking care of the equipment, it must be realized that a 100% output cannot be had at all times; particularly is this true during the winter season. For obvious reasons the facilities for repairs have not kept pace with the increased equipment. This matter should be one of careful consideration with a view of increasing the facilities as quickly as possible.

Shop organization is also a vital point, and, in order to produce the maximum output, should consist of capable men. The most important of these are the shop superintendent, or general foreman, and his assistants. It is generally found that when the work is divided better results are obtained than to have the entire shop or shop yard covered by one man, as this practice makes the head of each division responsible. Junior supervisors should be educated to fill the position immediately ahead of them, so that in the absence of the foreman the work will proceed without loss of efficiency. Men in supervisory capacities should be selected from the ranks when possible to do so. This practice is an incentive to others. They should be men of a good personality, broad minded in their dealings with men and thoroughly conversant with the details of the work.

Valuable results are obtained by holding monthly meetings of the supervisors, bringing them into closer touch with each other and the practices in vogue at their respective points. Meeting places should be changed from time to time, giving all an opportunity to observe the conditions at the different points. Much valuable information can thus be obtained that will result in saving and greater efficiency and due credit given to those who are responsible for same.

Material.—The shortage of material is a handicap in production, often necessitating the substitution of one kind for another. Careful attention should be given to the use of material, that none is wasted, and all is used to the best advantage. Full co-operation should be had between the mechanical and stores departments, in the handling of material,

that no unnecessary delay be had in supplying material at hand. Advantage should be taken of the scrap dock as much good material can be obtained. The necessary machinery and supervision to reclaim material should be furnished.

Repairs.—Under this heading the writer has divided the subjects into three classes, viz.: general repairs, light repairs and running repairs:

General repairs refers to both wooden and steel equipment receiving heavy repairs, or that are rebuilt, at which time due consideration should be given to the strengthening of all weak parts, the application of betterments, such as steel underframes, steel ends, improved doors and fixtures, etc., the thorough overhauling and modernizing of trucks, eliminating unnecessary parts and bolts, and providing safety irons to prevent brake beams falling down. After the completion of general repairs a final inspection should be made to know that all parts are in a serviceable condition before the car is released for service.

Light repairs.—Under this caption the writer refers to cars repaired on the ordinary repair track, and comprises such repairs as replacement of draft timbers, end sills, sill splices, parts of floors, parts of roof, doors and door fixtures, journal boxes, column castings, truck bolsters, side bearings, brake beams and connections, etc. Cars on light repair tracks should be gone over carefully for defects which may send them to the heavy repair track and avoid making light repairs when the condition is such as to warrant general overhauling. In connection with the light repairs enumerated, attention should be given to the brake equipment doing all the necessary work to put the brake in first class operative condition.

This is also an opportune time to inspect the car for worn parts, spreading of cotter keys, adjustment of the piston travel, seeing that proper connections and brake levers are applied, and that the hand brake and uncoupling levers are efficient, and periodical packing of boxes. If this is done it would prevent the cutting of cars when returned to service.

Running Repairs.—This is generally understood as repairs made in the classification or train yard, either by inspectors or what are termed "follow-up men." I wish to impress upon everybody's mind the importance of having the little things taken care of which are at times neglected; that is, renewing short or broken knuckle pins, worn out brake hangers and keys, bolts, the application and proper spreading of cotter keys, removal of worn brake shoe keys application of missing parts and correction of safety appliance defects. At this time the hand brake should also receive a thorough inspection, journal boxes should be examined to see that brasses and keys are in place, that no sign of previous heating exists and that packing is in its proper place and that there is enough lubrication to run the car to its destination. By giving proper attention to cars in the classification yard, which, of course, includes proper inspection, nearly all of our road delay and expense of setting out cars enroute could be avoided.

Quite frequently we hear complaints from other departments on account of too much time being consumed in inspection and repairs in the classification yards, and as explained above, I believe

I have made it clear to you that inspection and light repairs are very necessary to ensure the train going safely to its destination without delay. While the work should be done as quickly as possible, we should insist upon proper time for inspection and repairs being allowed to accomplish this.

The equipment department of the railway is passing through and experiencing one of the most strenuous periods of its history. The demand that has been made upon it by the operating department, due to the necessity for car equipment suitable for transportation purposes, has tended to make it necessary to use all classes of equipment to the maximum. We have been called upon to supply cars which can be placed in service to relieve were originally built, but for other classes of service for which they could be fitted by temporary repairs. As a consequence we now find ourselves with equipment on hand which will require some time to build up to its former usefulness and which cannot be very well accomplished unless all railways provide themselves with newly constructed equipment not for the commodities for which they equipment now running, to enable the cars to be brought into the shop and receive general repairs or overhauling which will fit them for the service for which they were originally built.

The foregoing paper was read before the Central Railway Club, in Buffalo, N.Y., recently.

Suggestions for Relief of Railway Congestion.

Double tracking of main lines from each important terminal to the first passing track, and a more general use of automatic block signals, are among the measures recommended by the American Train Dispatchers Association to relieve the serious congestion of railway traffic. Considerable attention has been given to facilitating operations within freight yards for the relief of this congestion, but a frequent cause of interruption in traffic movements is a delay to trains approaching or getting away from yards on single track lines. On double track lines, with especially heavy traffic, there may be an equal advantage in providing trackage for several miles from a terminal or division point in order to facilitate the movements of freight trains within the congested district. The advantages of automatic block signals for a similar purpose are obvious, since they permit of short blocks at comparatively small expense, while with the manual system the cost of installation and operation makes short blocks prohibitive. In the earlier days of automatic block signalling on American railways there were numerous objections from operating officials, to the effect that the introduction of this system would make it impossible to handle heavy traffic. Experience very soon showed, however, that the heavier the traffic the greater were the advantages of the automatic block system. Near terminal points it is especially desirable to reduce the length of the block sections to a minimum, in order to increase the traffic capacity; the automatic system meets this condition with efficiency and economy.

it, for as a general rule the heaviest power is used in helping service and with the high tractive effort of the locomotives that are used at present, such as the Mallet and Santa Fe types, with a tractive effort of from 70,000 to 105,000 lb., the cars have to be built and maintained strong, to stand the pulling and pushing of these monster locomotives. The trains are both long and heavy, and cars with weak end and center sills or weak couplers are very dangerous to handle in trains of this kind. There should be instructions given to all yard masters and car inspectors, that cars that appear to be old or of weak construction should be switched out of heavy trains, where helpers are used, and placed in a train to be run without a helper or a train hauling light tonnage.

In handling freight trains with power brakes as well as with hand brakes it is necessary to keep the speed low and not let the train get up to a high rate of speed at the start from top of grade, for

if this is done it will require a great deal more power to get it under control and very often is the primary cause of trains running away on the grades. By holding the speed down at the start and by making the applications often and as light as possible, so as to keep the retaining valves charged up as equal as possible at all times, you will have full control of the train and a lower temperature on wheels and less liability of cracked wheels.

Some roads handle trains on level tracks as well as on heavy mountain grades with electric power, and some other roads are figuring very strongly on electrification. While this method of operation applies only to a few roads, we are of the opinion that more roads will take up the matter of electrification in the near future, from the fact that with the electric locomotive the terminal delays can be reduced considerably, also delays in stopping for water and coal, and it has been demonstrated that an

electric locomotive can be run over three divisions of over 100 miles each, by changing crews, without any delays to the locomotive. This would indicate a high point of efficiency and economy, from the fact that it could be a no-stop operation from one end of the division to the other. This would eliminate the pulling of draw bars and damage to equipment due to starting and stopping. It would also reduce the cost of brake shoes and other equipment by not using the same, due to no stops.

On heavy grades the speed of the train is controlled, while descending, by regeneration. This reduces the wear on brake shoes, also reduces expense to a great extent in the maintenance of the entire brake equipment; but it must be understood that by regeneration the speed of the train is only held under control and it will be necessary to use the air brakes to stop the train, just the same as if you have been controlling the speed of the train with the air brakes.

Improving Maintenance of Way Methods.

By A. M. Burt, formerly Assistant Director, Division of Operation, U.S. Railroad Administration.

The expenditure for maintenance of way and structures on class 1 railways of the United States for 1919 was in the neighborhood of \$750,000,000, representing about one-sixth of the total operating expenses of these roads. Reduced to a daily basis, this means that it requires more than \$2,000,000 a day to keep the railways in condition for use. While this is much less than the amount spent for conducting transportation and considerably less than the cost of one of maintenance of equipment, it is nevertheless the major items that go to make up the total cost of operation. The increased cost of maintenance of way purposes has been very large, so that now fully \$1,000,000 a day more is being spent for this purpose than was spent three years ago.

The magnitude of these expenditures and the very large increases should make us all stop and take thought. The question that immediately presents itself in connection with them is whether progress is being made toward increased efficiency—if so, whether the maintenance of way department is keeping in step with the other departments in this essential matter, and whether some changes in methods can be made to secure better results. It is, therefore, of value to consider the differences that now exist in methods designed to increase efficiency as between the maintenance of way and the other departments of a railway. In comparing these methods we find the following conditions standing out very prominently:

In connection with transportation operations, many measures of work done have been devised and are in daily use and the supervisory officer is constantly in touch with the situation through various reports. In maintenance of equipment work some measures of work done have been devised, although their application is much less general than in the transportation department.

In maintenance of way work any measures of work done are, generally speaking, conspicuous by their absence. There is, in this work, no way of striking a balance between cost and output or of showing in any definite way whether the work is being done with greater or less efficiency than heretofore. On many roads a budget system is in use, but no mat-

ter how well such a system is carried out it does not supply the measure of work done. The roadmaster knows that he has been allowed a certain amount and believes that he has spent this amount judiciously, but he has no way of knowing definitely whether he has accomplished more or less than the roadmaster on an adjoining district or of knowing whether he is making an improvement or the reverse as compared with his past record. It seems clear that some measure of work accomplished is very desirable. There is nothing that stimulates thought and initiative to such an extent as a little competition with one's neighbor. It puts an element of sport into the job and not only helps the work but is a most developing condition for the individual.

It is realized that the character of maintenance work makes it especially difficult to establish measures of work accomplished, such as are in common use in connection with transportation matters, but there is apparently a tendency to magnify the difficulties of the subject and to assume the attitude, "What's the use? It can't be done." It surely must and will be done in a much larger measure than it is being done at present, and, if it is to be well done, the practical maintenance men must take an active interest in the subject and do their bit in solving the problem. When we have done anything in one way for years we all are apt to consider that way as being the only right one and to consider the subject as a closed book. This, in a measure, is the present attitude of mind, but we must shake ourselves loose from such an attitude if progress is to be made.

If the practical maintenance men do not take an active part in this matter there is danger of the work being put on a statistical basis to such an extent that no good results will be accomplished. There has been some of this in the past in other departments, where in some instances statistics have been undertaken so involved in detail that the result was nothing more than a work of the imagination. The maintenance men must make a special effort to ensure against such a mistake as this in connection with their work. On the other hand, some progress is possible, and something of this kind must be undertaken.

To illustrate what might be done but is not: Several years ago a certain railway used its maintenance forces for packing ice. The work was completed in December or January, and the following spring, about the time the mosquitoes began to get bad, a statement of the cost of the work was returned to the division from a source generally unknown. This report was turned over to the roadmaster, who was then very much engrossed in his spring work and who usually classified it as "Interesting, if true," checked it with a lead pencil and filed it away in its proper box where it could be used by his clerk in the event of his being called upon to make any explanation. No daily records were kept while the work was in progress. Some time later the work of packing the ice was turned over to a contractor, and immediately the job was organized on a business basis. The foremen were required to make a report each night showing the amount of ice packed, the pay roll in total and per ton and the delays in time and labor cost. In this way each foreman was kept in close touch with his work, without being unreasonably burdened with details. If he was delayed for switching, he had something tangible to show the yardmaster; if he had an unreasonable amount of trouble with his hoisting engine, the fact immediately showed up and received attention; or, if his force was out of balance, that fact was immediately called to his attention by the increase in his unit cost. It would have been entirely feasible to have had a similar plan when the railway was doing the work with its own forces, but no such plan was used.

Many similar instances could be cited, going to show that advantage has not been taken of the opportunities that are readily available. Every maintenance man should be giving this problem the most thoughtful and constant attention, and without question the subject deserves more attention from managers than it has had in the past. The following is offered by way of suggestion:

Better facilities should be provided for the exchange of ideas. Local roadmasters' associations should be encouraged. Such associations are most helpful if discussions are kept along general lines and away from matters having only a nar-

are and are interest. The time of the day when these matters were in well away. There is too much opposition with financial conditions, but apparently considerable benefit might be derived from the.

Advances at national railroads of countries should be actively encouraged and liberal assistance should be given for the purpose of not attending some position. The fact always being

back ideas and inspirations that result in more efficient work.

The question of getting a more general dissemination of ideas and information through publications should be considered. There should be a more general use of the railway periodicals.

The question should be considered not from the inside and by the talent already on the individual railways. There is plenty of talent, and, by encouraging the

local men to work out the problems, morale will be improved. They can do the work much better than it can possibly be done by any so called efficiency expert from the outside. In doing this each man should be given proper credit for his ideas and his part in the work.

The opportunity of the maintenance of way man is here. We look forward, confidently, to his making the most of that opportunity.

Cuban Purchasers of Railway Rolling Stock.

Canadian Trade Commissioner H. A. Cook has, within recent months, visited Cuba. There are three classes of purchasers of rolling stock in Cuba. First, there are the steam railways for the public service, which were all built and are con-

trolled by private capital. The two leading railways operating in Cuba are the United Railways of Havana, serving the western end of the island, and the Cuba Railroad, serving the eastern end of the island. Both these lines were built by British capital, the latter being the original Van Horne railway, but now controlled by New York interests. The United Railways of Havana, which includes several subsidiary roads, is still controlled from London and the majority of its senior officers are British. During the war many of its officers were from the United States, but during recent months several British engineers and railway officials have arrived to take over various departments. G. A. Moron, General Manager for many years, has been superseded by Brigadier-General Jack, formerly director of British railways in France. The United Railways of Havana is buying large quantities of rolling stock, of which it is badly in need, and all of which has come from the U.S. Brigadier-General Jack, however, is very keen to give British manufacturers every opportunity to submit quotations on all his requirements.

Type of Cane Cars, used in Cuba.

There are several smaller railways in Cuba, constructed to serve isolated portions of the island. Most of these are standard 4 ft. 8½ in. gauge, however. Second, there are the electric tram lines built for passenger traffic in the leading cities. Most of these are naturally comparatively small corporations, as Havana is the only city with a population of over 100,000. The United Railways of Havana control all the Havana electric properties, except the Havana Electric Railway, Light & Power Co.

Such tracks are built primarily for conveying the cane from the colonias or cane plantations to the mills to be ground. In some parts of the island not well served by the railway companies the

own rolling stock. The track mileage owned by a single mill runs from 60 kilometres to over 300 kilometres. A prominent engineer recently estimated that 100 sugar mills in Cuba each operate an average of 150 cars and 6 locomotives, and laid or used annually 15 kilometres of track. This estimate would mean that Cuban sugar mills themselves own and operate a minimum of 15,000 cane cars and 600 locomotives.

The building of cane cars alone for Cuba would offer a splendid market for the car manufacturer. The attached illustrations show the types of cane car generally supplied the Cuban sugar mill by the U.S. manufacturer.

The U.S. car manufacturer considers that he need never fear competition in the Cuban market. The Cuban customs tariff has placed a heavy general ad valorem rate on railway rolling stock of all kinds, amounting to 31.25%. The U.S. manufacturer, then, gets a reduction from this rate of 20%. This means that a Canadian car would pay 31.25% duty as against only 25% charged the U.S. car. The result has been that for many years U.S. rolling stock has had practically a monopoly of the Cuban market, although previous to the war Cuba imported some 10% of her rolling stock from the United Kingdom and Germany.

Editor's Note.—We think Mr. Chisholm is somewhat astray in speaking of

Types of Cane Cars, used in Cuba.

mills have built narrow gauge (3 ft.) roads. For the most part, however, the cane roads are standard gauge and laid to connect up with the larger railways, so that rolling stock may move freely over all lines. All the narrow gauge cane roads buy their own rolling stock. Many of the standard gauge cane roads have been using railway rolling stock. Recently the tendency has been for the larger sugar mills to buy their own cane cars and locomotives. The reasons for this have been the difficulty of procuring sufficient cars from the railways for moving the cane to the mills, and the desire of the mill owners to be independent of the railways.

There are 193 operating sugar mills in Cuba, with some 16 or 20 more in course of construction. These mills vary in capacity from 4,000 bags (a bag contains 320 lb.) annually to 700,000, the total production of the island being in the neighborhood of 30,000,000 bags for the last season. It is estimated that at least half of the Cuban sugar mills buy their

the Cuba Co.'s railway as having been built by British capital. Of course its founder, Sir William Van Horne, and a few Canadian associates, invested largely in it, but Sir William also secured the co-operation of a number of U.S. capitalists.

English Channel Tunnel. — Prospects for the realization of the project for a tunnel under the English Channel, to connect England and France have practically disappeared, according to recent reports from English engineering circles. It is thought that military and political reasons played a part in determining an apathetic attitude toward the project, but its great cost, and the uncertainty of earnings sufficient to justify the cost were also of influence. Moreover, because of conditions resulting from the war England's national energies will be devoted largely to maintenance and reconstruction for some years; it is stated, and few new works of magnitude will be undertaken.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

English River Pulpwood & Timber Limit Ry.—The Ontario Government will receive tenders to Dec. 18 for the right to cut forest products on an area in the English River water shed, having a total area of 3,046 square miles. The limit commences at the intersection of the northerly limit of the National Transcontinental Ry. right of way with the boundary between Ontario and Manitoba; thence north along the boundary to the southerly shore of the English River; thence northeasterly following the southerly shore of the river, lake expansions and Lac Seul to the intersection with the west limit of Indian reserve 28; thence southeast and south following the westerly and southerly boundaries of the reserve to its southwesterly angle near Lost Lake; thence south to the northerly limit of the N.T.R. right of way; thence westerly following the right of way to the point of commencement.

The conditions provide that the successful tenderer shall erect a pulp and paper mill and operate sawmills in Kenora, at which the timber cut shall be manufactured. The product of the limit will have to be conveyed to Kenora for manufacturing purposes, and to do this the contractor will, it is said, have to build a railway from some central point of the limit on the National Transcontinental Ry. to Kenora, or to the C.P.R. which at present serves that town. The only other railway connection would be easterly on the National Transcontinental Ry. to Superior Jct.; thence by the G. T. Pacific Ry. line into Fort William, and thence by the C.P.R. to Kenora; or westward by the National Transcontinental Ry. to Winnipeg, and then by the C.P.R. to Kenora. The suggested independent line would, it is stated, be about 100 miles long. Surveys for such a line were made some years ago by the Lac Seul, Rat Portage & Keewatin Ry. Co., incorporated by the Ontario Legislature in 1903 and re-incorporated in 1908, or by another company chartered by the Dominion Parliament to build a line from the Canadian Northern Ry. west of Port Arthur northerly to the English River.

Esquimalt & Nanaimo Ry.—The plans for the highway portion of the Johnson St. bridge, Victoria, have been finally approved by the E. & N.R. management, and tenders for the substructure were received by the City Council to Nov. 22. The work will, it is expected, be completed in about nine months. It is said that contracts for the steel superstructure and for the bascule span will be let in Feb., 1921. (Nov., pg. 606.)

Essex Terminal Ry.—The Dominion Parliament will be asked next session to extend the time within which the company may build the line authorized in 1917, from its existing line near Ojibway to Pelton, Ont., seven miles. (Sept., 1919, pg. 491.)

Flintlon Mining District.—We are officially advised that the Manitoba Government has arranged with the Canadian National Rys. to have a survey made, at the Government's expense, for a line from some point on the Hudson Bay Ry. to the Flintlon mining district. E. M. M. Hills will be the engineer in charge of the survey. The actual date of starting the survey depends upon when sufficient ice has formed to permit of being travelled over. It is expected that the first

party, in charge of J. E. Silcox, will start early in December, and the second party, in charge of A. J. Sill, as soon as possible thereafter. It is stated that the Manitoba Legislature will be asked next session to provide for the construction of the railway. (Nov., pg. 606.)

Grand Trunk Pacific Ry.—A press report states that contracts have been let to Olaf Hansen, J. McNeil and Jennings Bros., for the supply of 900,000 ties at various points between Prince George and Prince Rupert, B.C. (Sept., pg. 489.)

Kettle Valley Ry.—The branch line from Princeton to Copper Mountain, B. C., 14 miles, is reported to be completed, and application has been made to the British Columbia Government for the payment of the subsidy of \$5,000 a mile which was voted by the Legislature towards its construction. (Oct., pg. 550.)

Newfoundland Ry.—The St. John's City Council has been asked by the Newfoundland Railway Commission to reconsider its decision regarding the proposed temporary erection east of the St. John's railway station. The letter was referred to the city solicitor for consideration. The matter came before the Municipal Commission Nov. 11, when the application was refused on the grounds that the proposed building is not in accordance with the law, and that the site on which it was proposed to erect it is reserved for city purposes. (Nov., pg. 607.)

Pacific Great Eastern Ry.—A press report states that the last girder of the bridge over Deep Creek was put in position Oct. 28, and that track was laid over it on Nov. 1. The bridge, which was under construction for about 14 months, was fully described in Canadian Railway and Marine World, Dec. 1919, pg. 654. Canadian Bridge Co. had the contract for the steel work.

A press report states that with favorable weather conditions it is expected that track will be laid into Quesnel, B. C., by Christmas. (Nov., pg. 607.)

Pere Marquette Rd.—A press report states that tenders will be asked shortly for the construction of a station at Sarnia, Ont., the work to be gone on with in the spring. (Oct., pg. 551.)

Quebec & Chibougamau Ry.—See "The Quebec & Chibougamau Ry. Project" on another page of this issue.

Timiskaming & Northern Ontario Ry. A press report states that Timmins, Ont., Board of Trade has asked the Ontario Government to build a line from Timmins, on the T. & N.O.R. to the Canadian National Rys. near Sudbury. Such a line, it is said, would pass through a well timbered and mineralized country, and estimates as to its probable length vary from 44 to 75 miles. The Premier is stated to have advised the deputation that while a wagon road would probably be built through the district in the near future, the question of extending the railway must wait for a time.

Steel Rails Suit.—Arguments were concluded Nov. 9 in the Court of Exchequer in the case of the Dominion Iron & Steel Co. vs. the Dominion Government for compensation under the War Measures Act. The company was ordered by the Government to make certain quantities of steel rails at certain prices at a time when the company could have made greater profits on turning out steel for shells. Judgment was reserved.

Reid Newfoundland Co.'s Annual Meeting, Re-incorporation, Etc.

The Reid Newfoundland Co.'s annual meeting was held at St. John's, Oct. 28, at 3 p.m., President H. D. Reid in the chair. The directors' report contrasted the industrial depression prevailing almost all over the world with the unusual activity in the pulp and paper industry in Newfoundland, which gives hopes of a very large development of the water powers and timber areas of that Dominion. The company's railway and steamship operations showed an increased deficit, owing to the rising costs of coal and labor, but the Newfoundland Government has undertaken to improve the standard of the railway. Shortage of coal supplies retarded operation during the winter of 1919-1920, which was the most severe for 50 years. Extensive ballasting has been continued and the roadbed is in excellent condition. Locomotive power is in first class shape. The earnings from the electric and dock departments maintained steady progress, but extensions and improvements to these are necessary and will be undertaken during 1921. Group insurance on all employees has been effected and is expected to encourage co-operation and efficiency. The retiring directors were re-elected. At a special meeting later on the same day, held under the provisions of the Companies Act, it was decided to register the company under that act so as to get the benefit of the code of procedure which the act provides and which is not available to chartered companies.

On Nov. 4 Reid Newfoundland Co. Ltd. was incorporated under the Newfoundland Companies Act, with authorized capital of \$15,000,000 in 150,000 shares. The objects of the newly incorporated company, as set forth in the memorandum of association, are, briefly, to operate and further develop the present railway system and its branch lines, to operate the present street railway, electrical plants, dry dock, etc., to operate the steamship services now under the company's control, to build, purchase or otherwise acquire ships for the purpose of maintaining or developing these services, to develop the natural resources of the country or that section thereof for which it has grants, such as mining, timber, etc., and in the operation of the railway and steamship services, the company is to have priority over all other railways operated in Newfoundland, whether run by steam, electricity or otherwise.

A protest against the incorporation was filed by Sir William D. Reid and by C. H. Cohen, attorney for Miss Harriet Reid.

The directors of the newly incorporated company are H. D. Reid, President; R. G. Reid, Vice President; C. O'N. Conroy, Treasurer; J. P. Powell, H. B. Thomson and J. M. Forbes.

The Minister of Railways in England. Hon. J. D. Reid is reported to have said at the Canadian Club luncheon in London, Eng., Nov. 15, that the proprietors of the Grand Trunk and the Grand Trunk Pacific Railways, through the Canadian Government taking over these systems, would have their investments absolutely safe for all time and would never have to fear for their dividends or their principal. The Canadian Government had been criticized for building in advance of requirements, but such building had hastened the development of the country.

Canadian National Railways Construction, Betterments Etc.

Sydney, N.S.—The city council has asked the C.N.R. to repair the portion of Dood St., adjoining the station, which is owned by the Railways Department. The section owned by the city is only 12 ft. wide, the Government owning the rest.

Yarmouth Locomotive House Destroyed.—The Halifax & Southwestern Ry.'s frame locomotive house at Yarmouth, N.S., with its equipment, tools, and a quantity of railway supplies, was destroyed by fire recently.

St. John Yards.—The work in progress during the summer at the St. John, N.B., yards, is reported to be practically completed. In addition to the installation of a number of private sidings, and extra tracks on Water St., accommodation for about 600 more cars has been provided.

National Transcontinental Ry. Yards, Moncton.—A press report of Nov. 12 stated that most of the work of dismantling the N.T.R. yard at Moncton, N.B., had been done. The locomotive house was almost entirely demolished, the machine shop was being taken down, and the coaling plant was entirely demolished. It is reported that the yard will be done away with entirely, except possibly for the storage of old cars.

Quebec Hotel.—A Quebec dispatch of Nov. 9 said that it was unofficially reported there that tentative plans were being entertained by the C.N.R. for the erection of a large hotel there, along the line of the Chateau Laurier, Ottawa. We are officially advised that the report was without foundation.

Chaudiere Jct. Coaling Plant.—Tenders were received recently for the construction of a 350 ton mechanical coaling plant at Chaudiere Jct., Que.

Fresniere-St. Jerome Line.—Tenders were received to Nov. 30 for clearing, fencing, grading, culverts and bridge substructures on a line from mile 25.16, Lachute Subdivision, near Rinfret Jct., Que., to mile 23, Grenville Subdivision, near Fresniere, Two Mountains County, about 12 miles. We are officially advised that this line will extend from near Fresniere, on the Grenville Subdivision, about 23 miles from the Montreal tunnel terminal station, to near Rinfret Jct., which is the point of connection of the Montfort Subdivision with the Lachute Subdivision. There is considerable summer traffic on the Montfort Subdivision, which serves the Laurentian Mountains summer resorts. Access to this country has been greatly handicapped through want of direct train service with Montreal. At present, passengers from the Montfort Subdivision transfer to the C.P.R. at Montfort Jct., and are taken to the Place Viger station, Montreal. This has never been a very satisfactory arrangement for travellers on this line and has held back the development of the summer resorts. To reach Rinfret Jct. at present on the C.N.R. it is necessary, if going from the tunnel terminal station, to travel via Cushing Jct., a distance of 86 miles; from Moreau St. station, Montreal, the distance is 70 miles. The new line will give a route of 35 miles from the tunnel terminal station. The gradients and curvature on the existing lines are not excessive, and there will be no change in these, the whole improvement being in the distance to be travelled, particularly between Rinfret and the tunnel terminal station. The line from Fresniere to St. Jerome is very

straight, with few gradients of any account.

There will be, on the new construction, a steel bridge over the Deschenes River, immediately after leaving the Grenville Subdivision, but, outside of about half a dozen concrete culverts, there will be no other structure of any account. The grading will be very light. It is intended to start work as soon as the frost is out of the ground in the spring, and to have track laid and the line finished by next autumn.

Toronto to Parry Sound Betterments. Construction gangs between Toronto and Parry Sound, which have been engaged during the summer and autumn on betterments, are finishing up for the season. The work covered the putting in of concrete culverts, concrete abutments for permanent bridges, replacing temporary trestle structures; some new steel bridge superstructures; widening embankments and cuts; improving the drainage at the sides of the tracks; ballasting; enlarging existing buildings and putting up additional buildings. The ballasting has been done at a number of points, the track being raised and levelled up, a number of sags being taken out. A considerable mileage in all has been given a big coating of ballast, and at some points the track has been raised from 3 to 5 ft.

One of the larger bridge structures replaced is at the crossing of the Trent Valley Canal, where the old 120 ft. truss span, which was 28 ft. above water level, has been replaced by a 135 ft. through truss span 35 ft. above water level.

Surveys are reported to have been made at various points on the line between Beaverton and Washago, with a view to linking up the C.N.R. with the G.T.R., so as to do away with duplicate tracks, and provide for an interchange of traffic between the two lines. Some improvement along this line is reported to have been made in the vicinity of Orillia, and it is reported that further work is to be done which will have the effect of doing away with the C.N.R. stub line from Udney into Orillia. A connection between the two lines has been completed at Washago.

Trestle Fill near Parry Sound.—There has been completed on the line between Toronto and Capreol, Ont., a large trestle fill at mile 5.2 north of Parry Sound, the work on which was begun in 1918. The trestle, which was built in 1905, was 925 ft. long, with a maximum height of 60 ft. A 15 ft. concrete culvert was built to take care of the water, which required 1,539 yards of concrete, and a 15 ft. flat culvert under the roadway required 298 yards of concrete. The approximate quantity of material required to fill the trestle was 197,000 yards. The work was done by the Dominion Construction Co. under the superintendence of Resident Engineer McIlwain, of Parry Sound.

Westree to Kenogami Lake.—The construction of a railway to branch off from the C.N.R. at Westree, 64 miles west of Capreol, Ont., to Kenogami Lake, four miles west of Swastika, and on the Timiskaming & Northern Ontario Ry., is being advocated. The distance is approximately 80 miles, and the country through which it would pass is said to possess timber and mineral resources.

Hornepayne Terminal Buildings.—A locomotive house, machine shop and other buildings are under construction at Hornepayne, Ont.

Bridge at Beardmore.—A bridge is under construction near Beardmore, Ont., between Jellicoe and Orient Bay, the contractors being Campbell & Latimer.

Saskatchewan Branch Lines.—The following resolution was passed by the Saskatchewan Legislature Nov. 17:—"That, in the opinion of this Assembly, the Dominion authorities should be petitioned to appropriate at the earliest possible date sufficient sums of money to complete the Canadian National Ry. branch lines which are already projected into various sections of the province, and that they should be urged to continue construction work on such branch lines and complete them at the earliest possible date."

Oliver to St. Paul de Metis.—Grading was started in 1915 on a line from Oliver to St. Paul de Metis, about 125 miles, for 100 miles of which the Alberta Legislature guaranteed the bonds. It was reported to the Alberta Legislature in 1916 that 86.5 miles of grading had been completed, and in 1917 that grading on the whole 100 miles to Villette post office was completed. Track laying was started in Jan. 1917, and this, with bridge building, was proceeded with as far as Sucker Creek, 44 miles, where work was suspended. Track laying and other finishing up work was resumed during 1919, when track was laid for 100 miles, and about 20 miles of additional grading was done. A press report states that track was laid into St. Paul de Metis, Oct. 29, 1920. The railway enters the town on the northern side and a station is to be built a short distance north of the present business center on Main St.

An order passed by the Board of Railway Commissioners at the end of 1916, described the line as the Oliver-Battleford branch. This would suggest the continuation of the line easterly from St. Paul de Metis and its ultimate connection with the branch line from Battleford, now terminating at Turtleford, Sask.

Onoway to Whitecourt.—A branch line from Onoway to Sangudo, Alta., has been in operation for several years, and in 1913 grading was completed to Whitecombe, on the Athabasca River. Work was then abandoned and nothing was done until the summer of 1919, when the grades was gone over and track laying was resumed in Dec. 1919, with the result that the line was completed and put in operation as far as Robinson, 34.9 miles from Onoway, two miles beyond Sangudo, early this year. Some track was laid beyond Robinson, but the work was never finished, and owing to spring floods it got into very bad condition. A gang of men is reported to have been engaged during the past summer, lifting the track westward from Robinson's Crossing. Rails are reported to be on hand to lay track to mile 59, and some miles of grading are required to be completed, together with the repair or construction of 25 bridges of various sizes, none of them, however, being large structures, before the line is completed to Whitecourt. At this point access will be had to large gravel pits for ballast.

Vancouver Terminals.—A press report states that a contract has been let to the

The Interstate Commerce Commission announces it has approved a loan of \$1,840,700 to the Erie R.R. to aid in reconstructing freight train equipment, in making improvements to existing equipment and in making additions and betterments to roadway and structures at estimated cost of \$6,680,000. The company itself is required to finance about \$4,840,000 to meet the Government loan.

Canadian Railway Board of Adjustment No 1. Report.

The following report has been issued over the signatures of the Chairman, S. N. Berry, Vice President, Order of Railway Conductors, and the Vice Chairman, Geo. Hodge, Assistant to Vice President, Eastern Lines, C.P.R.:—

Two years having elapsed since the creation of Canadian Railway Board of Adjustment No. 1, it is deemed advisable to issue in condensed form an outline of the circumstances leading up to the formation of the Board and of its work during the two-year period.

On July 26, 1918, in response to a request made by the Dominion Government through the then Acting Minister of Labor, Senator G. D. Robertson, officials, representative of the various railways in Canada, and vice presidents and general chairmen from practically all lines in Canada for: the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, and the International Brotherhood of Maintenance of Way Employees, met at Montreal. Senator Robertson, acting as chairman, explained that the purpose for the call of the meeting was to arrive at an understanding as to the methods to be adopted for the application of the provisions of general order 27 of the Director General of the United States Railroad Administration, to Canadian railways, and also to consider and, if possible, arrange for some agreement whereby all differences arising between the railways and the employees concerned could be disposed of in a mutually satisfactory manner. General questions relative to the application of the provisions of general order 27, and other matters of mutual concern to the railway companies, their employees and the Canadian people were discussed, the general consensus of opinion, both from the viewpoint of those in charge of the railways and those representing the employees, being that some tribunal could and should be created to which all differences not otherwise disposed of between the railways and their employees could be referred for decision.

On July 27, 1918, a joint committee, representing the railways and the employees' organizations, met and prepared a tentative draft of a memorandum of agreement for the above purpose, such draft being in line with the terms of general order 13 of the U.S. Railroad Administration, under which Railway Board of Adjustment No. 1 at Washington had been instituted some months previously, the only difference in the draft as proposed being that the language was made applicable as a mutual agreement between the Canadian Railway War Board and the chief executives of the six organizations, parties to the proposed agreement. After the preparation of the memorandum of agreement, and its submission to and adoption by the representatives of the employees in conference, a few days adjournment was taken, in order that the Railway War Board might submit the tentative draft of the proposed memorandum of agreement to its member roads for consideration and endorsement, if approved, and so that the approval of the chief executives of the organizations might also be secured.

On Aug. 7, 1918, a further meeting was held between the Canadian Railway War Board's administrative executive

and the vice presidents, or other representatives, of the organizations specified, and on the same date the following memorandum of agreement was adopted and signed by the Canadian Railway War Board and by the chief executives of the organizations, parties to the agreement.

"Memorandum of Agreement made between the Canadian Railway War Board, acting for the railways of Canada, members thereof, of the one part; and the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, the Order of Railway Conductors, the Brotherhood of Railroad Trainmen, the Order of Railroad Telegraphers, and the International Brotherhood of Maintenance of Way Employees, acting for the said classes of employees on the said railways; of the other part. Whereas the parties hereto, in united desire to avoid disputes or misunderstandings which would tend to lessen the efficiency of transportation service in Canada during the war, have resolved upon the appointment of a board composed of members to be selected as hereinafter prescribed, which shall have full power and authority to determine all differences which may arise between any of the said railways and any of the classes of its employees above mentioned and which shall not be promptly adjusted between the officers and employees of the railway concerned; including the interpretation or application of wage schedules or agreements, and the application to Canadian railways of general order 27 of the Director General of the U.S. Railroad Administration; with authority to make such amendments or additions in line with such amendments or additions as may be made thereto for the railways in the U.S. as may be necessary, having due regard to the rights of the several classes of employees and of the railways respectively. Now therefore it is agreed by and between the parties as follows:

"1. There shall be at once created a board to be known as Canadian Railway Board of Adjustment No. 1, to consist of 12 members, six to be selected by the Canadian Railway War Board, and compensated by the railways, and six by the executive officers of the organizations of employees hereinbefore named, and compensated by such organizations.

"2. The Canadian Railway Board of Adjustment No. 1 shall meet in Montreal within 15 days after the selection of its members and select a chairman and a vice chairman, who shall be members of the board. The chairman or vice chairman will preside at meetings of the board, and both will be required to vote upon the adoption of all decisions by the board.

"3. The board shall meet regularly, at stated times each month, and continue in session until all matters before it are considered.

"4. Unless otherwise mutually agreed, all meetings of the Board shall be held in Montreal; provided, that the board shall have authority to empower two or more of its members to conduct hearings and pass upon controversies when properly submitted at any place designated by the board; provided, further, that such division of the board will not be authorized to make final decision. All decisions shall be made, approved or ratified by the board as herein provided.

"5. Should a vacancy occur in the board for any cause such vacancy shall be immediately filled by the same appointive

authority which made the original selection.

"6. The Canadian Railway Board of Adjustment No. 1 shall render decisions on all matters of controversy arising from interpretations of wage agreements and other matters in dispute as provided in the preamble hereof, and when properly submitted to the board.

"7. Wages and hours established by general order 27 of the Director General of the U.S. Railroad Administration and amendments thereto shall be incorporated into existing agreements on the several railways, and should differences arise between the management and the employees on any of the railways as to such incorporation, such questions of differences shall be decided by the Canadian Railway Board of Adjustment No. 1 when properly presented thereto.

"8. Personal grievances or controversies arising under interpretation of wage agreements, and all other disputes arising or now properly pending between officials of a railway and its employees covered by this understanding, will be handled in their usual manner by general committees of the employees up to and including the chief operating officer of the railway (or some one officially designated by him) when if an agreement is not reached, the chairman of the general committee of employees may refer the matter to the executive officer of the organization concerned, and if the contention of the employees' committee is approved by such executive officer, then the chief operating officer of the railway and the executive officer of the organization concerned shall refer the matter, with all supporting papers, to Canadian Railway Board of Adjustment No. 1, which board shall promptly hear and decide the case, giving due notice to the chief operating officer of the railway interested and to the executive officer of the organization concerned of the time set for hearing.

"9. No matter will be considered by the Canadian Railway Board of Adjustment No. 1 unless officially referred to it in the manner herein prescribed, provided, however, that no case having origin in circumstances occurring prior to the date hereof shall be referred to the board except those arising out of the application of the general order 27, or arising out of disputes properly pending at the date of this agreement as mentioned in clause 8.

"10. In hearings before the Canadian Railway Board of Adjustment No. 1 in matters properly submitted for its consideration, the railway shall be represented by such person or persons as may be designated by the chief operating officer, and the employees shall be represented by such person or persons as may be designated by the executive officers of the organizations concerned.

"11. All clerical and office expenses will be borne equally by the Canadian Railway War Board and the organizations above mentioned. The railway directly concerned and the organization involved in a hearing will, respectively, assume any expense incurred in presenting a case.

"12. In each case an effort should be made to present a joint concrete statement of the facts as to any controversies, but the board is fully authorized to require information in addition to the concrete statement of facts, and may call upon the chief operating officer of the

...and a committee for additional consideration of the matter.

10. All decisions of Canadian Railway Board of Adjustment No. 1 shall be approved by a majority vote of all members of the board.

11. After a matter has been considered by the board, and in the event a majority vote cannot be achieved, then any one member of the board may seek to refer the matter to a committee. The committee has been formed by a reference to be made to the board, and its findings shall be made to the Canadian General Manager, for appointment of a referee, whose decision shall be final.

12. The Canadian Railway Board of Adjustment No. 1 shall keep a complete and accurate record of all matters submitted for its consideration and of all decisions made by the board.

13. A report of all cases decided, including the decisions, will be filed with the Canadian Railway War Board, and with the chief operating officer of the railway affected and with the executive officer of the organization concerned.

14. The Canadian Railway War Board further agrees that the Canadian Railway Board of Adjustment No. 1 shall have like authority to determine differences between any of the railways represented herein and any other classes of employees of such railways who may request and consent to submitting differences to the Canadian Railway Board of Adjustment No. 1, and to agree that the decision of the said board shall be final.

15. This agreement shall remain in full force and effect during the period of the present war, and thereafter, unless the Canadian Railway War Board, on the one hand, as representing the railways, or a majority of the executive officers of the organizations, on the other hand, as representing the employees, shall desire to terminate the same, which can, in these circumstances, be done on 30 days formal notice.

The memorandum of agreement was signed by the following:—The Canadian Railway War Board, U. E. Gillen, Chairman, by S. R. Payne, W. M. Neal, General Secretary. The Brotherhood of Locomotive Engineers, W. S. Stone, Grand Chief Engineer, by Ash Kennedy, Assistant Grand Chief Engineer. The Brotherhood of Locomotive Firemen and Enginemen, Timothy Shea, Acting President, by Geo. K. Wark, Vice President. The Order of Railway Conductors, A. B. Garretson, President, by S. N. Berry, Vice President. The Brotherhood of Railroad Trainmen, W. G. Lee, President, by James Murdock, Vice President. The Brotherhood of Railroad Telegraphers, J. M. Mein, Deputy President. The International Brotherhood of Maintenance of Way Employees, A. E. Barker, President, by W. V. Turnbull, Vice President.

Pursuant to the terms of the agreement the following persons were appointed to the Board:—S. N. Berry, Vice President, Order of Railway Conductors; F. P. Brady, General Manager, Eastern Lines, Canadian National Rys.; Wm. Dorey, General Chairman, International Brotherhood Maintenance of Way Employees; U. E. Gillen, Vice President, G. T.R. System; Geo. Hodge, Assistant to Vice President, Eastern Lines, C.P.R.; A. J. Hills, Assistant to President, Canadian National Rys.; S. J. Hungerford, Assistant Vice President, Canadian National Rys.; Ash Kennedy, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers; A. D. MacTier, Vice President Eastern Lines, C.P.R.; J.

M. Mein, Deputy President, Order of Railroad Telegraphers; Jas. Murdock, Vice President, Brotherhood of Railroad Trainmen; G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Enginemen.

Messrs. Gillen and Hungerford have since resigned from the board and have been replaced by G. C. Jones, Assistant to President, G.T.R., and W. H. Sample, Superintendent Motive Power and Car Department, G.T.R.

During the two years ended Aug. 31, 1920, the board has been in session 86 days to deal with cases submitted to it.

It is apparent that misunderstanding still exists in the minds of some regarding the position of this board, as independent of the Railway Association of Canada (formerly the Canadian Railway War Board), although this matter was dealt with in a circular issued by the board, on Oct. 17th, 1918, reading in part as follows:—"It seems desirable to point out at this time that the body known as Canadian Railway Board of Adjustment No. 1 should not in any way be confused with the Canadian Railway War Board, which is an association of the Canadian railways through which joint action is taken in connection with important transportation matters affecting their operation. It is composed of railway officers who represent and act for practically all lines in Canada. Canadian Railway Board of Adjustment No. 1 is a body of 12, composed of six railway officers and six representatives of the following railway brotherhoods, viz.: Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen, Order of Railroad Telegraphers, International Brotherhood of Maintenance of Way Employees. As the War Board takes joint action for all railways, the representatives of the railways on Board of Adjustment No. 1 were selected by the War Board from the official staff of the railways. The board having been so constituted, no actual connection remained between the War Board and Canadian Railway Board of Adjustment No. 1. The function of Board of Adjustment No. 1 is to settle all disputes that arise between the railways and their employees who are members of the Brotherhoods named."

Appended to the report is a condensed statement of the 87 cases which have come before the board and of the decisions rendered. The board's receipts from Aug. 7, 1918, to Aug. 31, 1920, were \$17,868.98, half of which was paid by the railways and half by the employees organizations. The expenditures were \$15,700.47, the principal items being salaries to office staff, \$7,992.29; rent and taxes, \$2,651.05; printing, \$1,943.07; furniture, \$1,345.25.

The board's Secretary is R. Chapelle, and its office is at 263 St. James Street, Montreal.

C.P.R. Discontinuing use of Fuel Oil. On account of the uncertainty of oil supply, the C.P.R. is converting all its oil burning locomotives in British Columbia back to coal, and the same action is being taken in connection with its steamships in the B.C. Coast Service, and also in the hotels, which are now using oil.

The advertising in connection with the train service on the Newfoundland Ry. and the coastal steamship services is being done in the name of the Government Railway Commission, the title of the Reid Newfoundland Co. not being used.

Grand Trunk Railway Construction, Betterments, Etc.

Ottawa Crosstown Tracks.—Hon. A. L. Sifton, acting Minister of Railways, is reported to have promised favorable consideration of a request for the removal of the G.T.R. crosstown tracks in Ottawa. It is expected that an engineer of the Railways Department will be authorized to look into the matter.

Hamilton Street Crossings.—A press report states that the railway crossings of a number of street in Hamilton, Ont., are to be repaired, that at Canon St. to be the first to be taken in hand.

Brantford Subway.—A press report states that it is estimated that the cost of the proposed subway under the G.T. R. at St. Paul's Ave., Brantford, Ont., already approved by the ratepayers, will be about double the original estimate.

East London Interswitching Track.—A press report states that track will be laid on a new piece of line, over 900 ft. long at East London, from the interswitch to the Stratford line.

London Subway and Track Elevation. G. A. Mountain, Chief Engineer, Board of Railway Commissioners, was authorized recently to visit London, Ont., to confer with the city council with regard to the proposed subway under the G.T.R. tracks at Rectory St. This piece of work is part of the plant for the elevation of the G.T.R. tracks in the city, and the elimination of level crossings.

Detroit Coaling Plant.—A press report states that a contract has been let for the installation of an electric elevating equipment in the coaling station at Milwaukee Jct. yards, Detroit, Mich.

Port Huron-Chicago Improvements.—Windsor, Ont., press report of Nov. 14 stated that improvements estimated to cost \$10,000,000 were to be made on the line between Port Huron, Mich., and Chicago, Ill. G. A. Bell, C.M.G., Deputy Minister of Railways, Ottawa, is reported to have said Nov. 15 that no such expenditure was contemplated, adding that some day a lot of money would be needed for betterment and terminals on the line between the points mentioned.

Kalamazoo Locomotive House.—A press report states that it is contemplated to start construction in the spring on a frame locomotive house at Kalamazoo, Mich. (Nov., pg. 607.)

Romanian Locomotive Orders.—L. D. Wilgress, Canadian Trade Commissioner, writes from Bucharest as follows:—"Orders have been placed or are pending for the supply of several hundred new locomotives to Roumania. In view of the great deficiency of railway transport, this is considered the most urgent necessity of the country at present. The economic life of Roumania has been practically paralysed owing to the difficulties of transporting the exportable products. The first contract for new locomotives was placed last April with the Baldwin Locomotive Co., Philadelphia, for 50 consolidation locomotives at \$65,000 each, payment to be effected in either dollars or oil products. The first lot of these locomotives is expected to arrive in the country shortly. Another order was placed lately with Czecho-Slovakia for 80 new locomotives and the repair of 500 old ones. Five hundred are also to be repaired in Austria. The representative of Canadian interests has been in the country for several months negotiating for the supply of locomotives to Roumania."

Canadian Pacific Railway Construction, Betterments, Etc.

St. John River Bridge.—The Board of Railway Commissioners is reported to have recently fixed Nov. 25 as the date for hearing representations from interested parties as to the height of the bridge over the St. John River at St. John, N.B., above high water mark. The C.P.R. proposed to erect the bridge at the same height as the existing bridge, and the city council and marine interests asked that it be provided with the same clearance as the highway bridge alongside.

The construction of the substructure for the bridge is expected to have been completed during December by the Foundation Co., Montreal. The work is reported to have involved the excavation of 11,000 cu. yd. of rock, 4,000 cu. yd. of earth and the setting of 800 cu. yd. of gravel in concrete, as well as removing a heavy rock cut for the purpose of straightening out the line at the east approach of the bridge. The 10 concrete masonry piers on land, and the two granite piers in the river are reported to be well advanced to completion.

St. John Street Crossing.—The question of the elimination of the level crossing at Douglas Ave., St. John, N.B., came before the City Council in committee Nov. 4. The City Engineer is said to have reported that an overhead crossing would cost, including expropriation, from \$100,000 to \$110,000. A suggestion was made that the question of a viaduct should also be considered, and the Mayor stated that the whole matter could be taken up with the Board of Railway Commissioners.

Ottawa West Station.—The Ottawa Board of Control has been advised that the permanent station at Ottawa West will be at Victoria Ave., in conformity with the Board of Railway Commissioners' order.

Timiskaming, Que., District.—We are officially advised that a contract has been signed by the Canadian Pacific Ry., Quebec Government, and the Interprovincial & James Bay Ry. Co. for the construction of a line as authorized by the statutes of 1920, chap. 2, sec. 1, par F, which provided for a grant of \$1,600 a mile, in addition to 4,000 acres of land a mile, authorized in 1919, towards the construction of a line from near Timiskaming or Kipawa to the Quinze River via Ville Marie, 66 miles, and a further subsidy of \$6,400 a mile in case the company does not receive a subsidy of the same amount from the Dominion Government. The contract provides that construction shall be started before Mar. 17, 1921, and completed subject to the terms fixed by the Government, under the statutes of 1912, chap. 5, sec. 9.

Under the Interprovincial & James Bay Ry. Co.'s charter, the C.P.R. graded and laid track on a 10 mile stretch of line from Kipawa to Mercier Y., some years ago, and completed survey for its extension towards Quinze River. These surveys were resumed early last summer in order to locate the line to the proposed terminus at Quinze River rapids.

The Board of Railway Commissioners has passed the following orders recently: 30,420, Oct. 22.—Approving Interprovincial & James Bay Ry. revised route map of general location from terminus of its line already built, at mile 10, to mile 70, near the Quinze River. 30,292, Nov. 3. Authorizing Chief Commissioner to ap-

prove route map showing general location of Interprovincial & James Bay Ry. branch line from mile 48.2 to Ville Marie, 8 miles.

Acme to Drumheller, Alta.—A press report states that it is intended to complete the grading of the line along the Kneehill between Acme and Drumheller, Alta., next spring. D. C. Coleman, Vice President, Western Lines, who was in Calgary Nov. 15, is reported to have said that on the completion of the line to Drumheller it will be continued down the north side of the Red Deer River to connect with the Bassano-Empress line at either Duchess or Rosemary. (Nov., pg. 594.)

United States Railway Notes.

The Bureau of Railway Economics announces that the net operating income for September of class 1 U.S. railways fell approximately \$29,343,000, or 26.9%, short of amount expected under increased rates. This is based on reports from 207 railways of that class operating 237,899 miles.

The Interstate Commerce Commission announces it has approved a loan of \$9,630,000 to the New York, New Haven & Hartford Rd. to aid the carrier in providing itself with equipment, and additions and betterments to way and structures, at a total estimated cost of \$13,525,000.

The Railroad Information Bureau, New York, has announced that the average cost of running freight trains one mile as indicated by comparison of principal items of expense selected by Interstate Commerce Commission for statistical purposes, was 23.2% greater in July, 1920, than in July, 1919. The total of selected accounts was \$1.89 a mile this year and \$1.54 last year.

The Interstate Commerce Commission on Nov. 18 ordered railways in New York State to establish passenger and baggage rates on intrastate traffic, conforming to advanced interstate schedules, in its first decision on the right of the Federal Government under the Transportation Act to require railway rates within a state to correspond to higher levels of interstate tariffs. Similar proceedings are pending affecting more than half the states in the Union.

As a result of special drives to speed up the release and return of freight equipment, the New York, New Haven & Hartford Rd. to Oct. 17 reports that 15,333 loaded cars were placed, and 19,710 empty cars picked up. The railroad's plan of operation included the running of way freights, supported by extra switching service on Sundays, taking empties from industrial sidings and freight houses, for movement to connecting lines, and placing cars for unloading on Mondays. On many Sundays the number of loaded cars placed exceeded 1,000.

Reports of passenger train operation on the Pennsylvania Rd. for the past six months show that for every 10,000 miles run by locomotives, there were total delays to trains aggregating 1 hr. 7 min., due to locomotive failures, something wrong happening to the machinery of a locomotive. Similarly for every 10,000 passenger car miles, the total delays to trains due to car trouble, such as a hot box amounted to 3.9 min. In every 10,000 miles operated by passenger locomotives

there was an average of not quite three delays to passenger trains because of locomotive trouble. The total number of minutes lost by all of the 129,745 passenger trains on the whole railway because of locomotive and car trouble, in September, was 53,183, compared with 60,792 in April, when 106,508 trains were operated.

Reports compiled by the American Railway Association's Car Service Division show that progress is being made in the return of freight cars to the home lines. On Oct. 1, 30% of the freight cars were on the lines of the owning road, a gain of 2% from Sept. 1. On Mar. 1, when the railways were relinquished by the U.S. Government, only 2.19% of all the cars were on their home lines, as compared with 44% at the end of 1917, when the railways were taken over. Progress is noted in all districts and with all types of equipment except refrigerator cars. The return of freight cars to their owning lines as rapidly as it can be done consistently with the demands of commerce is one of the objects set for themselves by the railways since their return to private management. In general the railways have provided themselves with the types of cars best suited for the traffic of their respective territories and car repairs can be more satisfactorily made on the home roads. Therefore, relocation is important in the programme of providing more and better service to the public.

Grand Trunk Railway Stock Arbitration.

The three arbitrators, Sir Walter Cassels, Sir Thomas White and W. H. Taft, who will fix the price to be paid by the Dominion for certain G.T.R. stocks, in connection with the taking over of the line by the Government, met in Montreal Nov. 5. The G.T.R. was represented by its counsel and F. H. Chrysler, K.C., of Ottawa, appeared for the Government, with other counsel. After the meeting Sir Walter Cassels issued a statement in which he said:—"The meeting was held for the purpose of determining definitely the date at which the presentation of the case should begin. Counsel for the G.T.R. applied to the board to fix the date as Feb. 1 next. Counsel for the Government demurred. The G.T.R. counsel then made it clear that they had organized a technical staff of engineers and others when the statute was passed, which had been engaged continuously since that time in preparing the necessary evidence, as to the valuation of the physical assets of the system, and that their leading expert, Mr. Berry, reported that the case could not be ready with their expert evidence until Jan. 1; they said that they had not only been engaged in preparing their own case, but a considerable time had been taken in furnishing matter for the Government upon enquiries directed from time to time. Counsel said as soon as the case was prepared they desired a month in which to analyze the evidence, in order that they might present it in as clear a way as possible and thus save the time of the board. After some further discussion the board granted the application and fixed the time for the beginning of the presentation of the case on Feb. 1, 1921."

It is said that after the arbitrators' sittings there was a meeting of all the counsel engaged on the arbitration to discuss methods of procedure, etc.

Mainly About Railway People Throughout Canada.

Sir James B. Bell, Chief Engineer, Lake Superior & Western Canada Ry., died at Toronto, Nov. 16, 1908.

M. Roy Benson, who has been appointed as General Foreman, Montreal Central Ry., at Pointe St. Louis, Ont., was born there, May 10, 1866, and entered railway service in 1886, since when he has been, to 1910, assistant, Montreal Central Rd. Eng., St. Thomas, Ont.; 1910 to 1912, mechanic in various automobile shops in Detroit, Mich.; 1912 to 1914, machinist and engine fitter, C.P.R., at various points in Ontario; 1914 to Oct. 1920, successively, piece work inspector, erecting and furnace fitter, general piece work inspector, general locomotive house foreman, and assistant general foreman, Michigan Central Rd., St. Thomas, Ont.

Thomas Harrison Best, whose appointment as Assistant to Treasurer, Canadian Northern Ry. System, and Grand Trunk Pacific Ry., Toronto, was announced in our last issue, was born at Toronto, Oct. 6, 1893, and entered transportation service in July 1912, since when he has been, to Nov. 1913, clerk, Treasurer's office, Canadian Northern Ry., Toronto; Nov. 1913 to Oct. 1915, cashier, Canadian Northern Steamships Ltd., Montreal; Oct. 1915 to Jan. 1918, clerk, Treasurer's office, Canadian Northern Ry., Toronto; Jan. 1918 to Sept. 1920, chief clerk, Treasurer's office, Canadian Northern Ry. System, Toronto.

Lt.-Col. Frank Bond, who died at Montreal, Nov. 21, aged 76, was father of Major F. L. C. Bond, Chief Engineer, G. T. R., there.

W. Borbridge, Master Mechanic, Montreal Division, Quebec District, C.P.R., Montreal, was presented with a purse of money, Nov. 10, by a number of friends, on the occasion of his retirement on superannuation. He was born at St. Johns, Que., Apr. 12, 1855, and entered railway service in 1872, since when he has been, to 1874, brakeman, Brockville & Ottawa Ry. and Canada Central Ry.; 1874 to 1879, fireman, and fitter in locomotive house, same roads; 1879 to 1898, locomotive man, same roads, and their successor, the C.P.R.; 1898 to May 1907, Road Foreman of Locomotives, C.P.R.; May 1907 to Mar. 1910, District Master Mechanic, C.P.R., Ottawa, Ont.; Mar. 1910 to his retirement, Master Mechanic, District 3, Quebec Division; Master Mechanic, District 2 and Montreal Terminals, Quebec Division; and Master Mechanic, Montreal Division, Quebec District, C.P.R., Montreal.

F. P. Brady, who has been appointed Assistant to the Executive, Canadian National Ry., Toronto, was born at Haverhill, N.H., June 22, 1853, and entered railway service 1869 as station baggage-master Passumpsic Ry., since when he has been successively: 1873 to 1880, train dispatcher Northern Rd., at Concord, N.H.; 1880 to 1888, Chief Train Dispatcher Southeastern Ry., at Richmond, Va.; 1888 to 1889, Trainmaster, C.P.R.; 1889 to 1898, Assistant Superintendent, C.P.R.; 1898 to May, 1901, Superintendent, C.P.R. at Smiths Falls, Ont.; May 1901 to Sept. 1902, Superintendent districts 10 and 11, C.P.R., at Toronto; Sept. 1902 to May, 1903, Superintendent district 19, C.P.R., at Fort William, Ont.; June 1, 1903 to Feb. 1904, Assistant General Superintendent, Central Division, C.P.R., Winnipeg, Man.; Feb. 1904 to Sept. 16, 1908, General Superintendent, Lake Superior Division, C.P.R., North

Bay, Ont.; May 1, 1908 to June 1909, Member of Canadian Government Railways Board of Management; June, 1909, to June 1913, also General Superintendent, Canadian Government Railways, Moncton, N.B.; June 1913, on the abolition of the Canadian Government Railways Managing Board, to May 1915, General Superintendent, Canadian Government Ry., Moncton, N.B.; May, 1915, to June 1, 1917, General Superintendent, Canadian Government Ry., Cochrane, Ont.; June 1, 1917, to Dec. 1, 1918, General Manager, Western Lines, Canadian Government Ry., Winnipeg, Man.; Dec. 1, 1918 to Nov. 1920, General Manager, Eastern Lines, Canadian Northern Ry., and latterly Canadian National Ry., Montreal.

Charles Edward Brooks, who has been appointed Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance, Canadian National Ry., Toronto, was born at Con-

J. R. Cameron,
Assistant General Manager, Lines West of Ed-
monton, Alta., Canadian National Railways.

stantinople, Turkey, July 3, 1886, and entered railway service in 1905, since when he has been, to 1908, apprentice, G.T.R., Montreal, 1908 to 1914, machinist, draftsman, and Locomotive Foreman, Grand Trunk Pacific Ry., successively, Portage la Prairie and Rivers, Man., Watrous and Regina, Sask., Wainwright and Edmonton, Alta.; 1914 to May 1915, General Foreman, G.T.P.R., Transcona, Man.; May 1915 to Oct. 1, 1920, Superintendent of Motive Power, G.T.P.R., Transcona.

Hon. J. D. Reid, Minister of Railways and Canals, who left for England about the middle of September, accompanied by Mrs. and Miss Reid, returned to Ottawa Nov. 29.

Brig. General H. N. Rutten, C.M.G., who has been elected an honorary member of the Engineering Institute of Canada, was one of the charter members of the Canadian Society of Civil Engineers in 1887, and was President in 1910. He entered G.T.R. service in 1866, on the engineering staff, and three years later transferred to the Intercolonial Ry., and in 1872-73, was in charge of the engineering and construction of 50 miles of that line along the Baie des Chaleurs. He transferred to the Dominion Govern-

ment's service in connection with the C.P.R. in 1874, and made some of the first surveys for that line along the north shore of Lake Superior, and in the following year was in charge of a survey party to select a line for the C.P.R. between Edmonton, Alta., and the Yellowhead Pass. He was engaged on this for nearly two years, and located the line now generally followed by the Canadian Northern and Grand Trunk Pacific Ry. From 1877 to 1880 he was in charge of the engineering work between Winnipeg and Kenora (then Rat Portage), and in the latter year he commenced private practice in Winnipeg. He was appointed City Engineer, Winnipeg, in 1886, and retired in 1914, being appointed Consulting Engineer.

Lord and Lady Shaughnessy spent the first week end in November with the Governor General and Duchess of Devonshire, at Rideau Hall, Ottawa.

Hon. Mrs. A. T. Shaughnessy, the widow daughter in law of Lord Shaughnessy, Chairman, C.P.R., was married to Hon. Piers Leigh, son of Lord Newton, at London, Eng., Nov. 15. The Prince of Wales was present and gave gifts to the bride and bridegroom. Among the other givers of presents were the Duke of Connaught, the Prince of Wales' household, Lord Shaughnessy, and C. R. Hosmer, one of the C.P.R. directors.

Henry J. Small, formerly Superintendent of Motive Power and Machinery, Southern Pacific Co., Sacramento, Cal., died at Berkeley, Cal., at the end of October. He was born at Cobourg, Ont., and educated at the Normal School, Toronto. He entered railway service in 1863, with the Chicago & Northwestern Ry. at Chicago, Ill., the whole of his railway service being in the U.S.

E. Stephenson, town ticket agent, G.T.R., Whitby, Ont., died Nov. 22, as a result of a paralytic stroke.

Sir Thos. Tait, President, Fredericton & Grand Lake Coal & Ry. Co., and heretofore Vice President, Canadian Salt Co., Windsor, Ont., has also been elected President of the latter company, succeeding E. G. Henderson, who died recently.

W. K. Thompson, formerly Superintendent, District 3, Ontario Division, C.P.R., Toronto, and who retired from the service about 6 years ago, died at Toronto Nov. 22, aged 66.

H. H. Vaughn, consulting engineer, Montreal, formerly Assistant to Vice President, C.P.R., is now engaged for the G.T.R., in connection with the valuation of its equipment, for the arbitration to settle the amount to be paid by the Dominion Government for certain of the company's capital stock.

R. C. Vaughan, who has been appointed Vice President in charge of Purchases, Supplies, and Stores, Canadian National Ry., Toronto, was born there, Dec. 1, 1883, and entered railway service Oct. 3, 1898, since when he has been, to Mar. 1902, office boy, clerk and stenographer, General Freight Agent's office, C.P.R., Toronto; July to Dec. 1902, in Freight Department, G.T.R., Toronto; Jan. 1903 to July 1, 1910, clerk, secretary to Third Vice President and General Manager, and chief clerk to Third Vice President, Canadian Northern Ry., Toronto; July 1, 1910, to Oct. 1918, Assistant to Third Vice President, C.N.R., Toronto; Oct. 1918 to Nov. 1920, Assistant to President, Canadian National Ry., Toronto.

N. B. Walton, whose appointment as Assistant General Superintendent, Canadian National Ry., with jurisdiction over Grand Trunk Pacific Ry. lines between

Edmonton, Alta., and Prince Rupert, B. C., with office at Prince Rupert, was announced in a recent issue, was, on Oct. 26, when he returned to Edmonton to remove his family, presented with \$1,000 and a set of Crown Derby china, for Mrs. Walton, by the G.T.P.R. staff there, where he was Superintendent formerly.

Archibald Watt, whose appointment as Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Smithers, B.C., was announced in our last issue, was born at St. Louis, Que., Mar. 5, 1874, and entered railway service July 26, 1890, since when he has been, to Sept. 1892, wiper, G.T.R., Montreal; Sept. 1892, to Oct. 1897, fireman, G.T.R., Montreal; Oct. 1897 to Oct. 1901, locomotive man, G.T.R., Montreal; Oct. 1902 to Aug. 1906, machinist, G.T.R., Montreal; Aug. 1906 to Mar. 1907, Locomotive Foreman, Central Vermont Ry., St. Albans, Vt.; Mar. to Sept. 1907, Locomotive Foreman, G.T.R., Montreal; Sept. 1907 to Jan. 1908, machinist, G.T.R.; Mar. to Aug. 1908, machinist, Grand Trunk Pacific Ry., Saskatoon, Sask.; Aug. to Dec. 1908, Locomotive Foreman, G.T.P.R., Melville, Sask.; Dec. 1908 to June 1909, Locomotive Foreman, G.T.P.R., Wainwright, Alta.; June to Dec. 1909, machine foreman, G.T.P.R., Edmonton, Alta.; Jan. 1910 to June 1912, Locomotive Foreman, G.T.P.R., Prince Rupert, B.C.; June 1912 to Apr. 1916, General Foreman, G.T.P.R., Prince Rupert, B.C.; Apr. 1916 to Nov. 1920, District Master Mechanic, Mountain Division, G.T.P.R., Smithers, B.C.

James Waugh, who has been appointed Commercial Agent, Canadian National Rys., G.T.R., G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., San Francisco, Cal., entered G.T.R. service in 1891 as clerk in the Commercial Express Line office at Milwaukee, Wis., since when he has been, from 1894 to 1900, Soliciting Freight Agent, same line, Chicago, Ill.; 1900 to July 1, 1905, Travelling Freight Agent, same line, Detroit, Mich.; July 1, 1905, to July 1908, Michigan State Agent, Reading Despatch Line, Detroit; July 1908 to Oct. 31, 1911, Travelling Freight Agent, G.T.R., Philadelphia, Pa.; Oct. 31, 1920, Commercial Agent, G.T.R. System, 1911 to July 1915, Commercial Agent, G. T.R., Omaha, Neb.; July 1915 to Oct. 25, San Francisco, Cal.

R. H. Webster, Commercial Agent, Canadian National Rys., Moncton, N.B., was presented with a silver tea service by the local Freight Department staff, Nov. 6, on the occasion of his marriage with Miss A. Crandall, of St. John, N.B., Nov. 9.

H. K. Wicksteed, B.A.Sc., Chief Engineer of Location, Canadian National Rys., Toronto, has gone to Brazil, expecting to be away three months.

Responding to petitions received from carriers throughout the U.S. showing that further time is necessary to make changes in freight and passenger rates under the provisions of section 4 of the Act to Regulate Commerce, the Interstate Commerce Commission on Nov. 2 postponed effective date of its orders heretofore issued until Mar. 1, 1921, as to rates and charges for transportation of freight; and until Mar. 1, June 1, and Oct. 1, 1921, as to various classes of passenger fares and charges.

The Montreal Chamber of Commerce is reported to have passed a resolution asking the Board of Railway Commissioners to re-establish the pre-war custom of issuing excursion tickets at reduced fares for week ends and holidays.

The Quebec and Chibougamau Railway Project.

Canadian Railway and Marine World is officially advised that the Quebec Government has made a contract with the Quebec and Chibougamau Ry. Co. for building the first 50 miles of its railway from Chicoutimi to St. Felicien. Construction is to be started by May 1, 1921, and the 50 miles is to be completed and ready for operation by May 1, 1923. This piece of line will form part of 120 miles of main line and branches for which the Quebec Legislature last session voted a subsidy of 4,000 acres of land a mile, not convertible into cash by the Government. The line to be constructed is described as follows:—From the Quebec & Lake St. John Ry., near Chicoutimi, as far as, or near a point on, the James Bay Ry. in Demeules Tp., to the west of Lake St. John, running through the region east and north of the lake, the length of the main line and branches being 120 miles.

Chicoutimi, on the Saguenay River, is the terminus of a section of the Quebec & Lake St. John Ry., 227 miles from Quebec, and 51 miles from Chambord Jct., whence another section of the line 12.01 miles long extends to Roberval, from where a 17.6 mile section, built under the James Bay Ry.'s charter, carries the line to St. Felicien, on the Chamouchouan River. The proposed new line when completed will therefore extend from St. Felicien, on the west side of Lake St. John, round its northern and eastern shores, to Chicoutimi, on the Saguenay River, which, flowing from the eastern side of the lake, carries its waters to the Gulf of St. Lawrence, and will form, with the sections of the Quebec & Lake St. John Ry. and James Bay Ry., referred to, a belt line round the lake.

The Quebec & Chibougamau Ry. Co. was incorporated at the Quebec Legislature's last session to build a railway from Quebec to Chicoutimi, and thence northerly along the Mistissini River valley to Lake Chibougamau, about 180 miles north of Lake St. John, with branch line. The total length of the line from Quebec to Lake Chibougamau is estimated at 400 miles, irrespective of branch lines. The projected route of the line from Chicoutimi to St. Felicien connected with the route of the line subsidized by the Legislature, hence the contract with the Q. & C. Ry. Co.

The company is reported to have deposited a considerable sum with the Government as a guarantee, and to have agreed to wait until the completion of construction of the whole line before receiving the subsidy. The surveys for the line are reported to have been practically completed, and contracts for ties and other timber to have been let.

The route of the projected line from Quebec to Chicoutimi would follow the valleys of the Montmorency and the Jacques Cartier Rivers, and would give a line approximately 137 miles long, against the present C.N.R. line of 227 miles via Chambord Jct. From Chicoutimi the line would run north of the Saguenay River, to the north of Lake St. John, and along the Mistissini River valley to Lake Chibougamau, approximately 180 miles north of the lake. The country through which the first section of the line would pass through a good deal of timber and is generally very similar to that through which the Quebec & Lake St. John Ry. runs. The territory between Chicoutimi and St. Felicien is reported to be twice as great in

area as the district already settled on the south shore of Lake St. John. It possesses valuable untouched forests, large areas of level agricultural land, and an excellent climate. There are in operation at Jonquiere, Kingomani, Chicoutimi and Port Alfred large paper, pulp and sulphite mills to which the pulpwood taken will be handled. The Mistissini River valley is reported to be rich in timber, and to have numerous large waterpowers, and at Lake Chibougamau there are reported to be deposits of magnetic iron, copper and asbestos awaiting development.

The Q. & C. Ry. Co. is being financed by New York and London, Eng., capital, the syndicate being represented in Canada by a provisional board of directors consisting of H. C. Thomson, London, President; Captain M. C. Eastman, of the Royal Engineers, Vice President and General Manager; H. L. F. Blake, mining expert; J. G. Scott, formerly General Manager, Quebec & Lake St. John Ry. and General Manager, Great Northern Ry.; and J. F. Grenon, C.E., Chicoutimi.

Scarcity of Cross Ties in the United States.

Owing to the unprecedented levels to which prices of railway cross ties have risen, the Pennsylvania Rd. has decided to investigate the adaptability of the hardwoods of Central and South America for this purpose. Enquiries have been started along several lines, not only to ascertain how much more cheaply ties, or the material for ties, can be purchased in those countries, but also to investigate the question of the longer life of ties made from the southern hardwoods, as compared with those made from the North American native woods heretofore chiefly used. Under normal conditions the Pennsylvania Rd. uses from 5,000,000 to 6,000,000 annually. White oak, the most desirable North American wood for this purpose, is becoming rapidly scarcer. The other available woods in the U.S. have a very short life as ties, unless creosoted, which adds materially to their cost. The average net cost of railroad ties ready for placing in the roadbed has risen fully 100% since the beginning of the war.

Manganese Steel Rails Ordered—The Southern Pacific Co. has ordered 2,000 tons of manganese steel rails, at a reported cost of \$375,000. It is to be used on curves of from 6 to 12 deg. between Kern Jct. and Tehachapi, Cal., 47 miles, and between Truckee and Blue Canyon, Nev., 41 miles. It is said that the decision to use manganese rail for curves on these divisions is primarily a safety measure and is based on the experience of the Delaware, Lackawanna & Western Rd. The Southern Pacific Co. will use the manganese rail both for outer and inner rail. The manganese content will be 10.5-15.0%, carbon running 0.92 to 1.10%. The rail will be quenched in water immediately after passing the hot-saws. The rail webs at the ends will be drilled with high speed drills and copper plugs will be pressed and sweated in, to provide for rail bonding, since track drills are not capable of drilling the steel.

The C.P.R. is reported to have arranged for a heavy movement of grain from Goderich, Ont., during this winter.

Locomotive House Organization.

By E. B. Walsh, Master Mechanic, Michigan Central R.R., St. Thomas, Ont.

It is a common knowledge among those who are interested in the locomotive house that it is a very important part of the railway plant. It is the place where the locomotive is housed, and it is the place where the locomotive is repaired. The locomotive house is the place where the locomotive is kept when it is not in use. It is the place where the locomotive is stored, and it is the place where the locomotive is maintained. The locomotive house is the place where the locomotive is kept when it is not in use. It is the place where the locomotive is stored, and it is the place where the locomotive is maintained.

When the locomotive arrives at the locomotive house after making its trip, and has a full pressure of air, the air brake inspector should be assigned to inspect all the air, steam heat and scoop operating equipment and report any defects which he may notice. This inspection should take place while the locomotive man is inspecting the locomotive, and be reported in the engine house office as soon as the inspection is finished, so that the work report will be made out at the same time that the work is reported by the locomotive man.

The locomotive is then handled by the hostlers, coaled, sanded, fire dumped, watered, washed off and placed in the locomotive house. As soon as the locomotive arrives in the locomotive house, boiler, machinery and tank inspectors should thoroughly inspect it and the work be reported to the locomotive house office as quickly as possible, so that it may be included with reports by the locomotive man and air inspector. This work should be copied off on forms and distributed to the different departments. When it is finished the heads of these departments should have the men who have done the work sign the slips so that in case of inferior work or other trouble, the work can be traced to those responsible. The foreman should then take the slips into the locomotive house office, where the work is checked off the work book and the slip filed. As soon as the foreman of each department completes the work on a locomotive he should o.k. the locomotive on a board, which should be in every locomotive house, and made so that there is a place for each foreman of a department to o.k. his work. When the locomotive is reported o.k. on the board, final inspectors should then go over the locomotive and see that the work has been done properly and that nothing has been missed. The board or reports to the locomotive house foreman should then be o.k'd. The locomotive is then ready for service.

In case a locomotive comes in that is due for quarterly or monthly inspection, or hydrostatic test, orifice test or wash-out, a man designated to look after the reports, should have a stenciled sign placed on the front of the locomotive showing any or all inspections due.

Proper drop pits, machine shops, and tool rooms are a very essential part of the locomotive house equipment, and should be kept up to a high standard so that the very quickest turns that are always occurring in locomotive houses will not be delayed on account of having inferior machines, tools or drop pits.

It is also very important that the road foreman of locomotives should keep in close touch with the locomotive house organization and report needed work, so that the report of needed work is in the locomotive house office when the locomotive arrives at a terminal.

Many other essential features in connection with the locomotive house equipment add to its efficiency, such as heat, light and ventilation, proper facilities

for handling material, wash rooms and lunch rooms. Every effort should be made by the men in connection with the locomotive house organization to maintain the force in a harmonious and willing spirit, as it is essential that all in such an organization pull together.

The foregoing paper was read before the Central Railway Club in Buffalo, N. Y., recently.

Additional St. Lawrence Bridge for Montreal.

The question of additional bridge accommodation across the St. Lawrence River between Montreal and the south shore has been under consideration for some time, and special attention has been directed to it recently by the fact that the Montreal Harbor Commission has suggested the building of a low level bridge, with a draw span to provide for navigation. The only bridge providing for general traffic across the river is the Victoria Jubilee bridge, owned by the G. T.R., which has a 13½ ft. roadway in addition to railway tracks. A meeting of representatives of Montreal business interests was held Oct. 29, Lord Shaughnessy presiding, when the question was discussed. A deputation headed by Lord Shaughnessy waited on the Quebec Government Nov. 19 and presented the case for the provision of additional accommodation. Hon. L. A. Taschereau, Prime Minister, expressed sympathy with the plan, and pointed out that it was proposed to ask the Legislature, at its next session to provide for the erection of a bridge at Ile Perrot, and that the Dominion Government had already refused to aid such a bridge. He could not say what the Quebec Government might be prepared to do in the way of building a bridge, but the matter would be discussed and taken up again with the deputation at a future meeting.

In this connection the Montreal Central Terminal Co.'s plans were laid before the Montreal Chamber of Commerce, Montreal, on Nov. 3, when C. N. Armstrong explained the project, which was introduced in 1890. The company, he stated, provided plans for a bridge, and obtained financial support in New York, but the project was turned down on three successive occasions by the Dominion Government. The project was revived in 1912, and, after being approved by the then Minister of Public Works, the company acquired lands at a cost of about \$1,000,000 in the Cote St. Michel district. The plans provided for the erection of a bridge from somewhere between Longueuil and St. Lambert, east of St. Helen's Island, and therefrom with a single span of 1,250 ft. reach Montreal near Ontario St., the bridge to be 150 ft. above water level. At a subsequent period the charter was amended so as to provide for the construction of a tunnel. The war intervened and nothing was done. After some discussion a resolution was passed asking the Dominion Government to appoint a commission to investigate the question of the construction of a bridge or tunnel between Montreal and the south shore and of the provision of additional railway accommodation in and about Montreal.

A proposition is reported to have been submitted to the Montreal City Council by H. G. Tyrrell, formerly of Toronto, and now President of the Tyrrell Engineering Co., New York, for a franchise for a toll bridge between Montreal and Longueuil.

Canadian Traffic League's Annual Meeting, Etc.

The Canadian Traffic League, which is composed of traffic directors, managers, commissioners, and other officials in charge of traffic for industrial and commercial organizations, held its annual meeting at Toronto, Nov. 3, the President, A. W. Bell, of General Motor Co., Ontario, Ont., in the chair. Reports were presented from the following committees:—Classification, export, express, freight claims, organization, railway legislation and bills of lading, rate construction, refrigerator and heated cars, also a special committee on shippers' load and count. A number of other matters were dealt with, including the revision of the constitution.

The League's objects, as stated in the revised constitution, are:—To promote a better understanding by the public, provincial and Dominion governments, of the needs of the traffic world. To secure modification of present laws, regulations and rulings, where they are harmful to the free interchange of commerce. To advance fair dealing. To promote, conserve and protect commercial and transportation interests. To co-operate with the Board of Railway Commissioners for Canada, other organizations, and the transportation companies, thus bringing about better conditions generally.

The following officers were elected:—Honorary President, J. E. Walsh, General Manager, Canadian Manufacturers Association; Honorary Vice President, T. Marshall, Manager, Transportation Department, Toronto Board of Trade; President, F. W. Dean, Steel Company of Canada, Hamilton, Ont.; President, G. P. Ruickbie, Pulp and Paper Association, Toronto; Executive Committee, S. Brown, Manager, Transportation Department, Canadian Manufacturers Association, Toronto; N. Boyd, Gutta Percha & Rubber Co., Toronto; W. S. Campbell, Canadian General Electric Co., Toronto; W. R. Caldwell, Dominion Canners Ltd., Hamilton, Ont.; L. R. Howe, Assistant Traffic Manager, Transportation Department, Toronto Board of Trade.

In the evening, the League held its annual supper in the Toronto Board of Trade rooms, the President, A. W. Bell, in the chair. The principal speaker was D. B. Hanna, President, Canadian National Ry., who received a very hearty welcome, spoke on a number of interesting topics, and was enthusiastically applauded on resuming his seat. Other speakers were:—J. E. Walsh, General Manager, Canadian Manufacturers Association; T. Marshall, Manager, Transportation Department, Toronto Board of Trade; W. J. Grant, District Freight Agent, C.P.R., Hamilton; R. W. Long, District Freight Agent, G.T.R., Toronto; F. W. Dean, the Association's President elect; and Acton Burrows, Proprietor, Canadian Railway and Marine World.

The Pacific Great Eastern Ry. is, according to a press report, about to begin carrying mails from Vancouver to Prince George, and other points in the Caribou District of British Columbia. The mails will be taken from Vancouver to Squamish by steamboat and will be carried thence by rail to Soda Creek, which is as far as the railway is completed, where they will be transferred to a steamboat on the Fraser River for Prince George. Heretofore the Caribou mails have been transferred at Ashcroft by stages to Barkerville and Prince George.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—A. G. BARKER, heretofore Assistant to General Superintendent, Maritime District, also Supervisor of Telegraphs and Time Service, Eastern Lines, Moncton, N.B., has been appointed Superintendent, Moncton Division, Maritime District, vice W. R. Devinish, appointed General Superintendent, Ontario District, Eastern Lines. Office, Moncton, N.B.

F. P. BRADY, heretofore General Manager, Eastern Lines, Montreal, has been appointed Assistant to the Executive. Office, Toronto.

L. S. BROWN, heretofore General Superintendent, Maritime District, Eastern Lines, Moncton, N.B., has been appointed Assistant General Manager, Eastern Lines, vice W. A. Kingsland, appointed General Manager, Eastern Lines. Office, Montreal.

F. F. CAREY, heretofore Assistant Master Mechanic, Campbellton, N.B., is reported to have been appointed Assistant Master Mechanic, St. Maurice Division.

J. W. CONNELL has been appointed Assistant Freight Claims Agent, Western Lines, Winnipeg.

W. R. DEVINISH, heretofore Superintendent, Moncton Division, Maritime District, Moncton, N.B., has been appointed General Superintendent, Ontario District, vice D. Crombie, appointed Transportation Assistant to Vice President, Operation and Maintenance, as announced in Canadian Railway and Marine World for November. Office, Toronto.

A. DEVINE is reported to have been appointed Assistant Master Mechanic, Campbellton, N.B., vice F. F. Carey, transferred.

J. GLAZEBROOK, heretofore Car Foreman, Mirror, Alta., has been appointed Car Foreman, Biggar, Sask.

A. P. GORBELL, heretofore Car Accountant, Maritime District, Eastern Lines, Moncton, N.B., has been appointed Superintendent of Car Service, with jurisdiction over all lines south and east of the St. Lawrence River, vice W. N. Rippey, appointed Superintendent of Transportation, Maritime District, Eastern Lines. Office, Moncton, N.B.

J. W. JOHNSTON, Chief Inspector of Car Lighting, C.N.R., Toronto, has had his jurisdiction extended over the Grand Trunk Pacific Ry.

W. A. KINGSLAND, heretofore Assistant General Manager, Eastern Lines, has been appointed General Manager, Eastern Lines, succeeding F. P. Brady, appointed Assistant to the Executive. Office, Montreal.

E. LANGHAM, heretofore General Purchasing Agent, Toronto has retired from the service.

LOUIS LAVOIE, heretofore Assistant General Purchasing Agent, has been appointed General Purchasing Agent, succeeding E. Langham, who has retired. Office, Toronto.

J. D. MCAULAY, heretofore Commercial Agent, Grand Trunk Pacific Ry., Prince Rupert, B.C., is reported to have been transferred to Foreign Freight Department, Canadian National Rys., Montreal.

J. MCLELLAND, heretofore Car Foreman, Calgary, Alta., has been appointed Car Foreman, Mirror, Alta., vice J. Glazebrook, transferred.

L. McCUTCHEON, heretofore Export and Import Freight Agent, Vancouver, B.C., has been appointed Foreign Freight Agent there, and his former position has been abolished.

J. D. MacNUTT, heretofore Inspector of Train Dispatching, Maritime District, Eastern Lines, Moncton, N.B., has been appointed Assistant Superintendent, Halifax Division, Maritime District, Eastern Lines. Office, Truro, N.S.

H. C. MEACHAM has been appointed Import Freight Agent, with supervision of import freight traffic via Atlantic and Pacific coast ports. Office, Montreal.

R. M. MITCHELL, Right of Way and Property Commissioner, C.N.R., has had his jurisdiction extended to include the G.T.P.R.

R. C. Vaughan,
Vice President, Purchases, Supplies and Stores,
Canadian National Railways.

H. M. MORGAN, General Agent, Passenger Department, G.T.R., Buffalo, N. Y., will act in the same capacity there for the C.N.R.

J. C. O'DONNELL, heretofore Superintendent, Manitoba Division, Central District, Western Lines, Winnipeg, has been appointed General Superintendent, Maritime District, Eastern Lines, vice L. S. Brown, appointed Assistant General Manager, Eastern Lines. Office, Moncton, N.B.

W. N. RIPPEY, heretofore Superintendent, Car Service, Maritime District, Eastern Lines, Moncton, N.B., has been appointed Superintendent of Transportation, Maritime District. Office, Moncton, N.B. His duties are to supervise transportation on the district generally; receive from the Superintendent of Car Service all car service orders and transmit them to district officers concerned;

distribute cars between various divisions of the district and generally supervise car supply on district; distribute locomotives between divisions (master mechanic to select the individual locomotives of each class involved); see that freight trains and cars are properly loaded, check up overtime and delays and be responsible for the economical operation of train service generally; prepare and distribute working time tables; arrange for special passenger trains; supervise the examination of train and locomotive men in connection with vision and hearing, also knowledge of train rules, air brakes, car heating and lighting, etc.; and perform such other duties as the General Superintendent may specify from time to time.

W. LE B. ROSS, heretofore Local Treasurer, G.T.P.R., Winnipeg, has been appointed Local Treasurer, C.N.R., Western Lines and G.T.P.R., vice C. H. Hickie, transferred to other duties. Office, Winnipeg.

J. G. SWALWELL, heretofore Auditor of Revenue, Grand Trunk Pacific Ry., Winnipeg, has been assigned to other duties in the C.N.R. offices there, and his former position has been abolished.

R. C. VAUGHAN, heretofore Assistant to President, has been appointed Vice President in charge of Purchases, Supplies and Stores. His jurisdiction extends also over the Canadian National Rys.' affiliated and subsidiary companies. Office, Toronto.

JAMES WAUGH, Commercial Agent, G.T.R., San Francisco, Cal., will act in the same capacity for the C.N.R., G.T.R. and G.T.P. Coast Steamship Co., vice W. F. Barry, transferred to the Passenger Department.

Canadian Pacific Ry.—F. L. HUTCHINSON, Manager in Chief of Hotels, has resigned, to take effect Dec. 31. Up to Nov. 17 no appointment of a successor had been made.

D. JONES, heretofore Locomotive Foreman, Windsor, Ont., has been appointed Locomotive Foreman, London, Ont., vice B. Pendleton, transferred.

D. R. KENNEDY has been appointed Assistant District Passenger Agent, St. John, N.B., during winter, and Quebec, Que., during summer, the supervision over rail traffic, ex Atlantic steamships.

H. R. MATHEWSON, heretofore Travelling Passenger Agent, St. John, N.B., has been appointed Assistant General Agent, Passenger Department, C.P.R., Minneapolis, St. Paul & Sault Ste. Marie Ry., and Duluth, South Shore & Atlantic Ry., vice G. G. McKay, transferred to Canadian Pacific Ocean Services Ltd. Office, Chicago, Ill.

B. PENDLETON, heretofore Locomotive Foreman, London, Ont., has been appointed Locomotive Foreman, Ottawa, Ont.

E. J. SEMMENS, Travelling Industrial Agent, Department of Colonization and Development, Calgary, Alta., has had his headquarters transferred to Vancouver, B.C., reporting to J. F. Sweeting, Industrial Agent, Winnipeg.

A. A. SHEPPARD, heretofore Locomotive Foreman, Ottawa, Ont., has been appointed Locomotive Foreman, Windsor, Ont., vice D. Jones, transferred.

Canadian Pacific Ocean Services Ltd. G. G. MCKAY, heretofore Assistant General Agent, Passenger Department, C.P.R., Minneapolis, St. Paul & Sault Ste. Marie Ry., and Duluth, South Shore &

The Newfoundland Railway Commission is reported to have taken over control of the operation of the Newfoundland Ry., and the steamship services operated in connection therewith by the Reid Newfoundland Co. A press report of Oct. 8 states that all bills relating to the railway service are being paid by the Commission, and in advertisements on the trips of the coastal steamers the words "Government Railway Commission" have been substituted for "Reid Newfoundland Co."

Position of Canadian Northern and Grand Trunk Pacific Railway Securities.

The Canadian Gazette, London, Eng., of Oct. 28, said:--An important statement which, although unofficial, should be of great interest to holders of Canadian Northern Ry. 5% income charge convertible debenture stock and of Grand Trunk Pacific 4% debenture stock, was made recently at a private gathering of business men in London by A. J. Mitchell, Vice President, Canadian National Ry., who, however, made it perfectly clear that he was not speaking in an official capacity. As regards the Canadian Northern Ry. 5% income debenture stock, it may be recalled that no interest has been paid since Oct. 1914. Apart from the question of interest, stockholders are even more concerned as to the security of the principal, which is repayable at par on May 6, 1930 (or at the option of the company at any time after May 6, 1920, at six months notice). Ever since the Canadian Northern Ry. was taken over by the Canadian Government an official announcement has been awaited as to the Government's intentions in regard to the repayment of this stock, and it may be gratifying to stockholders to learn that Mr. Mitchell, speaking (as we have already intimated) in his personal capacity, expressed his conviction that the Government will pay off this stock at par in 1930. The amount outstanding is \$5,144,000. As regards the Grand Trunk Pacific 4% debentures, the interest is guaranteed by the Grand Trunk Ry., subject to the payment of interest on its own loan capital. The debentures are irredeemable, except at the company's option, on one year notice after Mar. 1, 1936. This stock has paid no interest since Mar., 1919. The question in this case is whether the Canadian Government on acquiring the G.T.R., will assume responsibility for the interest on the G.T. Pacific 4% debenture stock. Inasmuch as the Government, under the purchase terms, will in effect be paying interest on G.T.R. guaranteed stock, which clearly ranks after the G.T. Pacific debentures, it is inconceivable that the debentures will be allowed to remain in default. Mr. Mitchell supported this view, giving his opinion that the Government will assume responsibility for all the G.T.R.'s guarantees as soon as it takes possession of the railway. The present quotation of the Canadian Northern 5% income debenture stock is 29.32, and the quotation of Grand Trunk Pacific 4% debentures is 45.50. If Mr. Mitchell's statement ultimately carries official confirmation, the Canadian Northern stock, now standing at about 30, will be worth 100 in 10 years, while as regards the G.T. Pacific 4% debenture, if it becomes an acknowledged liability of the Canadian Government, it will stand at a higher price than 50, at which the yield would be 8%.

The Canadian Gazette of Nov. 4 reported Mr. Mitchell as saying to its representative:--"The article re Canadian Northern Ry. 5% income debentures and Grand Trunk Pacific Ry. 4% debentures in the Canadian Gazette of Oct. 28 stated that I supported the view expressed with reference to the payment of interest on Grand Trunk Pacific 4% debenture stock. This does not correctly report me. The view expressed by me was that the acquisition of the Grand Trunk Ry. stock by the Government did not in any way

change the legal position of the debenture holders, but the fact that the Government was the sole shareholder would tend to strengthen the position of the security holders rather than otherwise."

The Greater Winnipeg Water Dis- trict Railway's Position.

In connection with procuring a water supply from Shoal Lake, adjoining Lake of the Woods, for Winnipeg and adjacent municipalities, the Greater Winnipeg Water District Commissioners built a railway from St. Boniface to Shoal Lake, 92 miles, principally to facilitate the taking in of construction materials, but as progress was made with the work, a considerable number of settlers, now said to number over 900, went in and considerable freight and passenger traffic was developed. The commissioners decided to maintain the operation of trains on the line after construction of the water pipe line was completed, with the result that the railway did not earn operating expenses, a recent report stating the deficit as \$60,000 a year. The Mayor of Winnipeg is reported to have favored taking up the rails and selling them on the ground that the city went into a water works project, and not a land development and colonization one. One alderman claimed that the line should be subsidized by the Dominion Government, which owns land along its route.

A deputation representing the G. W. W. D. Commissioners is reported to have waited on Premier Meighen when he was in Winnipeg recently, and urged that the line be taken over and operated by the Government, or that it be given a land grant or a cash subsidy. The Premier is said to have stated that the matter would be considered, but he could not hold out any hope that it would be granted. A subsequent press report states that the Premier informed the Commissioners that after consideration it was found impossible for the Government to take over the line, or aid it by a land grant or cash subsidy.

Grand Trunk Railway Bonds Sold.

Wm. A. Read & Co., the National City Company, Blair & Co., Bankers Trust Co., Guaranty Trust Co., Lee, Higginson & Co., and the Continental and Commercial Trust and Savings Bank, all of New York, offered recently for subscription at par there \$25,000,000 Grand Trunk Ry. of Canada (Canadian National Ry. System) 7% 20-year sinking fund gold debenture bonds, and the issue was subscribed. The bonds are guaranteed as to both principal and interest by endorsement by the Dominion of Canada, the prospectus stating that they are a direct obligation of the G.T.R. of Canada which the Dominion has agreed to purchase and merge with the Canadian National Ry. System, have interest payable April 1 and Oct. 1, and the principal is repayable at par Oct. 1, 1940. The bonds are callable as a whole after Oct. 1, 1935, at 102½, on 30 days notice, on any interest date. A sinking fund of \$500,000 a year, available half yearly, beginning April 1, 1921, is to be provided for the purchase of the bonds in the market if obtainable at or below par, but if bonds are not so obtainable during the succeeding six months, the unexpended balance is to revert to the company. Interest is payable in gold at the Bank of Montreal agency in New York.

The Booster Engine for Locomotives.

The four Pacific type locomotives, which the Timiskaming & Northern Ontario Ry. has ordered from Canadian Locomotive Co., are to be equipped with the locomotive booster, and as far as Canadian Railway and Marine World is aware they will be the first locomotives in Canada to have this appliance.

Description.—The following description is taken from a bulletin issued by the manufacturers, Franklin Railway Supply Co. The booster consists of a simple 2-cylinder steam engine, upon a special design cast steel bed plate, which bed plate also forms the axle bearings and truck support.

ricates all bearings, except the main ones on the trailing axle, which are lubricated in the same manner as is employed for car journal boxes, i.e., a waste packed oil box.

The Westinghouse control valves are air operated. The control is simple. The locomotive man decides that he needs the booster, he makes contact, the rest is automatic, viz.: 1. The booster goes into gear. 2. The steam goes from the booster throttle to the booster engine. 3. The booster power is applied to the axle through an idler gear, which is out of contact when the booster is out of gear. 4. At the proper time the steam cuts off

weights bordering on the limit the track structure will bear. Yet their speed pull curves nearly coincide with those of lighter locomotives of the same type. Great starting and accelerating power is the principal advantage. The locomotive booster gives an increase in starting and accelerating power equal to what 50,000 lb. additional locomotive weight would give. And the booster weighs only 3,500 lb. It defers, if not wholly eliminates, large investments for improved roadway to carry bigger locomotives.

The booster puts any locomotive with trailing wheels into the next class above,

Locomotive Booster in Position on Trailer Truck of Locomotive. Locomotive booster assembled. Cover removed to show construction and operation.

Three-point suspension is provided; two bearings fitting on the trailing axle, and a third, which is a ball joint, fitting on the back member of the trailing truck frame. This suspension gives sufficient flexibility to compensate for any torsional movement between trailing truck frame and axle due to equalizing, and in addition the ball joint is located near the center of gravity of the booster engine, thereby relieving the bearings on trailing axle normally of the weight and minimizing wear of the booster bearings.

The piston rod, connecting rod and crank shaft follow liberal locomotive practice. The crank shaft and driving piston are integral and are of heat treated steel, liberally designed.

Lubrication is taken care of by enclosing the entire engine and connections in an oil tight steel case and using the splash method. This automatically lub-

ricates all bearings, except the main ones on the trailing axle, which are lubricated in the same manner as is employed for car journal boxes, i.e., a waste packed oil box.

Advantages Claimed.—The manufacturers of the booster make the following claims for it:—For heavy loads at speed, the steam making capacity of locomotive boilers has been enormously increased. To carry this increased boiler capacity trailing wheels have become universal. A large surplus of steam is available in starting. A lot of weight on the trailing wheel is available for starting. The booster makes use of the surplus steam applying it to the trailing wheels in starting. It capitalizes idle weight and spare steam with negligible addition to the weight of the locomotive, and without increased demands on the engineman. Control is semi-automatic giving the locomotive man maximum resource and a negligible minimum of attention to its operation.

Locomotives built recently employ

in starting effort, because the trailing wheels act as an additional pair of drivers. On freight trains this means more tons annually, because of greater starting effort and acceleration, and avoids damage to machinery and equipment, because of a smooth steady start. On passenger trains it means smooth starting and quick acceleration to road speed. This adds to the comfort of the traveling public, protects the equipment from damage, and renders schedules more easily maintained, by avoiding delays in starting.

Tests on New York Central Rd.—The manufacturers have supplied the following information:—For approximately two years Pacific type locomotive 3149, equipped with the booster, has been in operation on the New York Central Rd. To determine the booster's operating advantages a series of tests were conduct-

At the River Point between Ravens and Weehawken, the distance is 1.30 mi. long, with a ruling grade of 0.46% at Haverstraw, going east, and 0.46% at Haverstraw, going west. The locomotive has a load on driver of 184,000 lb., and is rated 2,600 tons. It was operated at the West Shore division recently.

running up the grade alone, before it was started after coupling up, the engine was doubling the time lost. In the test run the practice referred to was not followed. Locomotive 3149 hauled the train to the water plug, attached the water and started up the grade with full train, with the number in operation, as shown by the dynamometer record. It

is speed on the grade, without the booster, the performance would have been superior.

At this point an important time saving operating situation developed. Because of the time saved at Catskill, West Point was reached three minutes before an express was due. The express was followed to Weehawken, whereas usually

Locomotive booster, applied to a Mikado Locomotive

cal convention and has been in continuous road service since that time; no special preparations being made for the test. A dynamometer car was used to obtain the necessary data. In making these tests information was wanted on the following points:—1. Practical increase in tonnage that could be hauled over the division because of the booster. 2. Effect of the booster on train operation over the division. 3. Maximum drawbar pull with booster in action. 4. Maximum drawbar pull without booster. 5. Time saved over the division because of the booster. 6. Increased train acceleration by use of the booster. 7. Effect of a crew inexperienced with the booster, operating a locomotive equipped with a booster.

The first test was made going east from Ravens to Weehawken. Without the booster, locomotive 3149 is rated from Ravens with 2,600 tons, and runs to Newburgh, where the tonnage is reduced to 2,100 tons, a reduction of 19.2%. The following is the ruling tonnage for the West Shore Division:—

Distance in Miles.	
West Shore Division, Newburgh, Catskill, Ravens	1.30
Tonnage Going East Without Booster	2,600
Tonnage Going East With Booster	3,100
Tonnage Going West Without Booster	2,600
Tonnage Going West With Booster	3,100

In making the test it was decided to endeavor to take 2,582 tons through to Weehawken. This not only involved getting over the ruling grade at Haverstraw, but also introduced other interesting and important operating problems. At Catskill, the water plug is located at the bottom of two grades. It is the usual practice to leave the train at the top of the grade west of the water plug, run two miles for water, back up to the train, and make a run down grade to get sufficient momentum to carry over the up grade. The profile of the road at this point, fig. 1, shows a down grade of 0.55% and an up grade overgrading 0.375%. Running for water in this way consumes 20 to 30 minutes time in good weather. When the weather is bad, with sleet and snow, 30 minutes more is usually lost in

2, the locomotive, with the booster in operation, accelerated to 5 miles an hour very quickly, the drawbar pull showing 41,067 lb. at this point, and in a distance of 580 ft. the speed increased from 5 to 8½ miles an hour, or an increase of 70% as to acceleration. When the booster

two or three local passenger trains are allowed to go ahead. At times this adds another 30 minutes delay in addition to the time lost at Catskill. After leaving Catskill, the booster was used for starting whenever the train was stopped for signals or other reasons, each start

Trailer truck of locomotive, with booster.

was disengaged, and the locomotive took the load entirely, the drawbar pull showed 23,497 lb., a difference of 7,570 lb. drawbar pull.

Reference to fig. 1, showing the road profile, and fig. 2, showing the dynamometer record, clearly indicate the part the booster played in making possible the starting of the train and getting up

showing rapid acceleration.

The ruling grade on this division is known as the Haverstraw grade, fig. 3. It is over 6 miles long and an average of about 0.46%. This grade was approached at a speed of 33 miles an hour, with the booster idle, and continuing up grade at the end of the first mile the speed was 28½ miles per hour; at the end of second

mile, 19 miles an hour; at the end of the third mile, 12 miles an hour; at the end of the fourth mile, 8 miles an hour; at the end of the fifth mile the speed was

point the booster was cut in, on a grade of 0.52% and in 432 ft. the speed reached 8 miles an hour and the drawbar pull 42,900 lb., an increase of 6,459 lb. draw-

cause of the booster in three quarters of a mile of 33 1/3%, with a train tonnage of 22.9% above normal. In taking this train over the ruling grade, the booster

Fig. 2. Locomotive booster assisting in starting train of 2,582 tons, on Catskill grade.

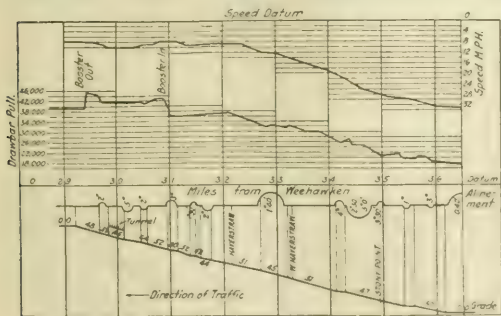

Fig. 3. Performance of locomotive, with booster on Haverstraw grade, with 22.6% excess tonnage.

7 1/2 miles an hour, and falling rapidly. The drawbar pull showed 36,441 lb. Without the assistance of the booster the train would have stalled. At this

bar pull, or 17.7% because of the booster. In the first 3/4 mile after the booster was working the speed reached 10 miles an hour. This shows an acceleration, be-

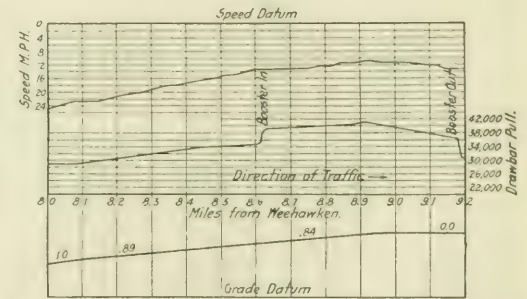

Fig. 4. Locomotive, with booster, surmounting Bogota grade, with 12% excess baggage.

Fig. 5. Stalling test of locomotive, with booster, to determine maximum drawbar pull.

was used for about 1 1/2 miles, and just before being disengaged a drawbar pull of 45,080 lb. was recorded on the dynamometer car. The train arrived at Wee-

drawbar pull, the same locomotive with booster in motion from Ravena. This was the first time that the booster had been used in the test, and the results were very satisfactory. The addition of the booster increased the drawbar pull from 34,228 to 38,793 lb., an increase of 13.04%. The booster was then cut out, and the locomotive proceeded until stalled. As shown by the dynamometer car record, fig. 5, the train pulling 2,577 tons, the usual tonnage from there to Newburgh being 1,800 tons. At West Park, on a 0.52% grade, it was found necessary to again use the booster, as the speed had dropped to 12 miles an hour. Upon arrival at Kingston, the train was increased to 2,745 tons, which is 145 tons over regular rating of 2,600 tons, and the train continued to Ravena, successfully handling this tonnage.

One of the important features of the booster, emphasized by these tests, was the rapid acceleration which is accomplished at practically no increase in weight, as the booster weighs less than 4,000 lb. The following tabulation shows clearly the reason for this.

The train drew away west of the division at Kingston, 1 mile from West Park, at 12 miles an hour. It was a 1,500-ton, 14-wheel train. The dynamometer car was started at 8 miles from Hoboken, where the speed was 25 miles an hour, and about two-thirds of the way to the coast had increased to 13 miles an hour. At this point the booster was cut in. The drawbar pull immediately increased from 34,228 to 38,793 lb., an increase of 4,565 lb., as shown in fig. 4.

At West Park a test was made to determine the combined power of the locomotive with the booster. The grade at this point is 1.04%. The train was brought to a standstill, and a start made to take away. As shown by the dynamometer car record, fig. 5, the train pulling 2,577 tons, when it stalled, and the maximum drawbar pull at zero speed registered 51,138 lb. The boiler pressure remained constant; the throttle was wide open and the reverse lever in the corner.

To determine the maximum drawbar pull of the locomotive without the booster, a test was made on an 0.86% grade into Congers, the tonnage at this point being 1,958 tons, one car having been set off, on account of hot boxes. With the booster working, the train was brought entirely on the grade, the booster then cut out, and the locomotive proceeded until stalled. As shown by the dynamometer car record, fig. 6, the drawbar pull registered 40,421 lb. at zero speed. To get the train moving again, the booster was engaged and the maximum drawbar pull registered 49,953 lb., showing an increase of 9,532 lb. in favor of the booster.

At Cornwall the tonnage was increased to 2,577 tons, the usual tonnage from there to Newburgh being 1,800 tons. At West Park, on a 0.52% grade, it was found necessary to again use the booster, as the speed had dropped to 12 miles an hour. Upon arrival at Kingston, the train was increased to 2,745 tons, which is 145 tons over regular rating of 2,600 tons, and the train continued to Ravena, successfully handling this tonnage.

One of the important features of the booster, emphasized by these tests, was the rapid acceleration which is accomplished at practically no increase in weight, as the booster weighs less than 4,000 lb. The following tabulation shows clearly the reason for this.

Maximum drawbar pull of locomotive, at zero speed	40,421 lb.
Drawbar pull of locomotive with booster engaged, at zero speed	49,953 lb.
Increase in drawbar pull by use of booster, at zero speed	9,532 lb.
Maximum drawbar pull of locomotive, at 12 miles an hour	34,228 lb.
Maximum drawbar pull of locomotive with booster engaged, at 12 miles an hour	38,793 lb.
Increase in drawbar pull by use of booster, at 12 miles an hour	4,565 lb.

On freight trains this is important, as it enables a quick start-away and the increase in available starting power means a smooth, even, start. This often saves sufficient time to permit a freight train to continue on its run, when otherwise it might necessarily have to take a siding to permit other trains to pass. In addition it avoids damage to rolling stock by avoiding the need of taking slack. On passenger trains, it means saving time in starting from station or other stops. A few minutes saved at each stop with a heavy train helps to maintain operating schedules. The smooth easy start also adds to the comfort of the travelling public.

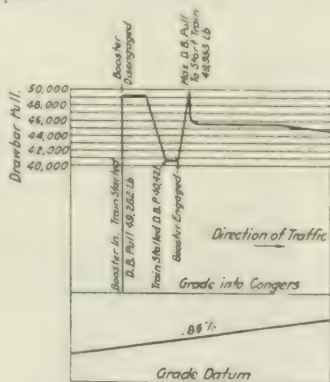

Fig. 6. Stalling test of Locomotive, with booster, to determine maximum drawbar pull without booster.

Conclusions.—The manufacturers make the following claims:—1. The booster renders possible increasing the tonnage that a locomotive can haul. 2. It provides quick acceleration, that helps to maintain schedules more easily, and reduces the time over the division. In several instances under observation, the time consumed for get-away of freight out of terminals and yards was reduced 50%. 3. It eliminates the need for taking slack in starting. 4. It reduces tire and rail wear, as slipping of drivers is avoided. 5. It increases the average speed over grades and eliminates stalling. 6. The booster power is always instantly available at speed below 12 miles an hour. 7. It helps to relieve traffic congestion, increasing the maximum ton miles over the division. 8. No extra coal is consumed because of the booster, and fuel economy should result, because the time required over the division is reduced. 9. It is automatic in operation and control, and adds no extra duties to the locomotive crew. 10. Because of its smooth steady pull at starting, it reduces wear and tear on equipment, and eliminates break-in-tows. 11. It gives the effective increase in drawbar pull in starting, and at slow speeds, that an additional pair of drivers would give, but avoids hauling around 50,000 lb. or more weight that large loco-

motives would involve, weight that is used a large percentage of the time, and that prevent track and bridge structures will not carry. 12. The booster is in motion less than 10% of the time. Its maintenance is negligible. 13. It avoids stalling where sudden weather changes while en route would render impossible the hauling of normal tonnage. 14. It provides a reserve capacity that helps to even out the difference between an experienced and inexperienced crew.

The Booster in Canada.—As stated at the commencement of this article, the 4 Pacific type locomotives which the Timiskaming & Northern Ontario Ry. has ordered from the Canadian Locomotive Co. will be the first in Canada to be equipped with the booster, Canadian Locomotive Co. having advised us that it has not been applied on any locomotives built at Kingston up to this time, and Montreal Locomotive Works having advised us that it has not been applied on any locomotive built there. We are also advised that the C.P.R. Mechanical Department is investigating the booster, but that this investigation has not progressed far enough to enable anything to be said as to its merits, or whether it will be used by that company. The Canadian National Ry. management informs us that it does not intend to take any action at present, as it understands the booster has not yet passed beyond the experimental stage on the several U.S. railways on which it is being tested. The Grand Trunk Ry. management states that it has not equipped any of its locomotives with the booster, and its use is not being considered.

C.P.R. Tools Returned by a Convert.

From the Vancouver World.

The equipment of the Canadian Pacific Ry. is this day enriched by the addition of a shop drill and steel saw, both very much the worse for wear, which some years ago belonged in the local shops. "I have been saved and squared myself with God," reads the letter that accompanied the tools, which comes from a mechanic formerly in the employ of the company here, "and I want to square myself with man, so I am sending these back." F. W. Peters, General Superintendent, to whom the letter was addressed, commented on the fact that the donor had "got religion" a short time after leaving the company's employ, the result of which was a substantial consignment of tools which had previously found their way out of the company's shops. Those which arrived today are something which the offender states he "overlooked," and the C.P.R. officials are looking forward to another shipment as the religious influences become stronger.

Railway Engineers Nominated.—The Engineering Institute of Canada's nominating committee, for officers for 1921, has named J. M. R. Fairbairn, Chief Engineer, C.P.R., as President. Among those nominated for councillors are Major F. L. C. Bond, Chief Engineer, G.T.R., Montreal, for district 1; S. S. Oliver, Chief of Stores, Quebec Ry., Light, Heat & Power Co., Quebec, for district 2; C. Kirby, District Engineer, C.P.R., St. John, N.B., and S. B. Wass, Division Engineer, Canadian National Ry., Moncton, N.B., for district 3.

The C.P.R. Co. has given \$250,000 to the centennial endowment fund of McGill University, Montreal, and \$50,000 to the University of Montreal.

Canadian Pacific Railway 60-ton Hopper Bottom Box Car.

As stated in Canadian Railway and Marine World, when the orders were placed last spring and summer, the C.P. R. is having 3,500 sixty-ton hopper bottom box cars built. Hoppers are being provided at the side door openings, as a result of very satisfactory service having been obtained from 200 cars similarly equipped which were placed in special service between Port McNicoll and West St. John, N.B., commencing Oct., 1911. The general dimensions are as follows:—

Type	Single sheathed, steel framing
Length inside	40 ft. 6 in.
Width inside	8 ft. 6 in.
Height inside	9 ft.
Height from rail to top of floor	3 ft. 7 in.
Width of door opening	6 ft.
Capacity in cubic ft., exclusive of hoppers	3,008 cu. ft.

pressed steel diaphragms, riveted to center and side sills, and covered top and bottom by $14 \times \frac{3}{8}$ in. plates. The crossbearers are made up of $\frac{1}{4}$ in. pressed steel diaphragms, riveted to center and side sills, and covered at top by a $6 \times 7/16$ in. plate and bottom by a $6 \times \frac{3}{8}$ in. plate.

The underframe is fitted with four cross-tie webs or stiffeners, pressed from $\frac{1}{4}$ in. plate. Two of these stiffeners are located between each bolster and crossbearer. Between the center sills at each crossbearer and stiffener a $\frac{1}{4}$ in. pressed diaphragm is used.

Side Framing.—The side plate is a special rolled angle $6 \times 3\frac{1}{2} \times \frac{3}{8}$ in., having an 87° root angle. The posts and braces are U shaped, pressed from $\frac{1}{4}$ in.

are the Burnett type. When used for freight that cannot be dumped through the hopper, the car has a solid level floor the same as an ordinary box car; when grain, coal, etc., are to be loaded the specially constructed sections of the floor over the hoppers are turned up against the side door posts. This arrangement allows the load to go directly into the hoppers, and also saves considerable temporary door lumber. When the cars are unloaded, it is only necessary to remove the pin that locks the hopper doors; the doors open quickly by gravity and immediately a large percentage of the contents of the car discharges through the hoppers. The balance of the load may be shoveled to the middle of the car by hand, or if the unloading plant is

Sixty Ton Hopper Bottom Box Car, Canadian Pacific Railway.

Light weight	about 18,200 lb.
Maximum loading	about 120,700 lb.
Limit load $5\frac{1}{2} \times 10$ in. journals	169,000 lb.
Ratio of loading to weight of car at rail	71.4%

The arch bar trucks are composed of $1\frac{1}{4} \times 6$ in. top and bottom members, with cast steel column posts, designed to take either Harrigan pinless brake beam hanger or A.R.A. standard type. The spring plank is a 13 in. no. 32 channel, with ends at arch bar, and spring seat, reinforced by heavy steel castings. An unusual feature is the use of a rivet through the spring plank on each side of the spring plate, the heads of the rivets preventing the springs from slipping out of position.

Underframe.—The center sills are composed of two 12 in. 35 lb. ship channels, tied together by $\frac{1}{4} \times 20$ in top cover plate. Steel striking casting, coupler carrier, draft lugs and center brace are used.

The bolsters are made up of $5/16$ in.

plate, flattened at side sill and plate, to provide large riveting surface. The side sill is 9 in., 17.5 lb. per foot. The door posts are made of 4 in. 8.2 Z bars.

The side doors represent what is believed to be the best obtainable. The interlocking front and back edges afford exceptional protection against weather and pilfering. The top edge is thoroughly weatherproof, yet so arranged that it cannot become blocked with ice. The bottom of the door is fitted with turned rollers, that fit on very substantial and rigidly supported track. This track is not likely to be blocked with ice, but in case it should be, the interference is plainly visible and easily removed. The location of rollers at the bottom of the door does away with the binding, or cramping, so frequently noticed on doors suspended from the top.

The grain hoppers, located at the side door opening, on each side of the car,

equipped with power shovels, as most elevators are, the floor door on one side of the car is released from the door post, and the cables taken through the door opening as usual. The hopper doors have no operating mechanism; they are closed directly by hand and secured by simple locking bar arrangement.

End Frame.—Murphy horizontal corrugated ends, in two pieces, are used. The top section is formed to secure ample connection to side plates, and provide a very strong end plate. The bottom edge of the end is securely riveted to a $6 \times 4 \times \frac{1}{2}$ in. angle forming end sill, which is in turn securely fastened to side sills and diagonal braces as well as center sills.

Roof.—Murphy outside metal roofs, with $13/16$ in. t. and g. boards, laid longitudinally, are used in connection with strong Z bar carlines, providing ample supports at side plates. Part of the cars

The Railway Situation in Newfoundland.

By P. T. Magrath, St. John's, Newfoundland.

Like the rest of the world, Newfoundland has its railway problem, not the less, but perhaps the more difficult to solve, because it is a country of but some 250,000 people, and it is, in the opinion of many authorities, largely over supplied with this expensive method of transportation. Even before the war, the Newfoundland Railway was not a paying concern, losing on an average about \$100,000 a year for about 10 years, on an average annual income of about \$650,000, according to figures supplied the Government. The railway, originally built for the colony by the late Sir Robert Reid, of Montreal, a contractor who had previously undertaken many large railway ventures in Canada, is a narrow gauge line.

The actual mileage operated is about 1,000, and the road is being worked by Sir Robt. Reid's sons, under a lease for 50 years from the Newfoundland Government, the company being paid for the operation by mail subsidies and grants of land along the railway line, or, in other parts of the country, accepted by the Reids in preference to cash, because of the possible value of the timber, mineral and farmland wealth in the country and its eventual development. With the outbreak of war, the railway situation became complicated in Newfoundland, and while traffic fell off, the cost of coal, labor and other supplies increased enormously, the reconditioning of the line proved difficult, locomotives and cars could not be procured, and all the other phenomena of the situation in Canada and the United States were reproduced here. The annual loss steadily increased, reaching \$350,000 for the year ended June 30, 1918, and amounting to \$310,000 for the seven months ended Jan. 31, 1919, the latest figures available, with little reason to suppose there has been any drop in the rate of losses since these deficits have been incurred on an income of about \$1,250,000 a year.

At the same time, rolling stock and roadbed have been allowed, according to critics, to run down, accidents increased, and public confidence in the road as a safe means of travel became shaken. A great deal of criticism was engendered by politics, because the railway has played a large part for 30 years in the politics of the country, each succeeding government finding it more or less necessary to become closely associated with the railway management, and the party in opposition using this as a ground for criticism and hostility. In the general election of just a year ago, for instance, the then opposition bitterly attacked the then Government for having been under the domination of the Reids and pledged themselves, as others had done before them, to make the Reids toe the mark and carry out their contract. A political change took place, the opposition was elected, and now the tables are turned and the new administration is charged with being more closely allied with the Reids than any of its predecessors. The reason for this is that at the legislative session last spring an act was passed creating a commission to study and act upon acute problems of the railway. The Reids had claimed in effect that it was impossible for them to continue the operating of the system much longer, without Government help, the Government agreed to furnish \$1,000,000 for recon-

ditioning purposes, provided the Reids agreed to supervision by a commission on which the Government would have four members, one being the chairman, and the Reids three. The Government planned to have one of its four an English railway manager, and another an accounting expert, but these have not yet been selected. The other two were to be a Government representative, who would be chairman, and the Colonial Engineer, himself a competent railway authority, and adviser to the Government on these matters. The \$1,000,000 was earmarked for the purchase of locomotives, freight cars, and new fish-plates for fastening the rails, those at present in use being condemned as too small for effective service, and provision was made for a thorough study of the general business. It was also understood, according to critics, that this commission scheme was to be merely a tentative one, to continue only for a year, and that at the next session of the Legislature some permanent plan for the operation of the railway hereafter would be submitted.

Whether or not it be correct that the commission appointed recently by the Government has exceeded its powers, the programme upon which it has resolved is as follows:—

The mid-interior section of the railway, where the line ascends the range of hills, known as the Topsails, and which form the backbone of the country, at a height far above sea level, is to be abandoned for the winter in future, at any rate for passenger traffic, and a new route is to be operated in winter via Argentina, in Placentia Bay, and Sydney, N.S., giving passenger, mail and express freight transit probably once a week by the steamship Kyle, with an alternative service between Halifax and Argentina by the steamship Meigle. By this means it is hoped that delays of past years will be avoided, because virtually every winter since the trans-insular railway began trains have been at times two or three weeks making the trip of 546 miles between St. John's and Port aux Basques, and last winter this section of the road had to be abandoned at the end of January and was not reopened until well into May.

A local passenger, mail and freight service is to be maintained each winter, while the through line is closed, semi-weekly between St. John's and Grand Falls (the seat of the great Northcliffe paper mills) on the east coast, a distance of about 500 miles, while a similar service will be conducted on the west coast, between Port aux Basques and beyond Bay of Islands, the seat of the main herring industry, a distance of about 150 miles, the interior section of the Topsails already described, and totalling about another 100 miles, with practically no settlers, being abandoned.

To make this Argentina-Sydney service effective, Argentina, heretofore without railway connection and three miles from the nearest point on the track, is to be connected by a spur line covering that distance, and now under construction, and at Argentina it is proposed to build piers extensive enough to take large ocean freight steamships and to use it as a winter shipping port for the Harmsworth paper mills operating in the interior of the country, and at present suffering difficulty from this cause, if the company

will agree to make it a terminal for such purposes.

The whole system of the in-bay and coastwise steamship connection, heretofore partly owned and operated by the Reids, and partly by the Government, has been taken over by the commission and is being operated in conjunction with the railway line. The Reids formerly had 10 ships connecting with the trains at convenient points for the great bays and at other sections of the coast into which the country naturally divides itself, because nearly the whole of the population are settled around the seaboard in countless harbors whence they ply their fishery pursuits and the railway without such auxiliaries would be virtually useless to them. Some of the Reid steamships were taken for war purposes, and others were lost by perils of the sea and the Government procured others in England, and in America, while the previous administration bought two locally which did the main services from St. John's, north and west, and it is claimed that better results can be obtained by combining all these—Reid and Government—as a single agency in connection with the railway.

The Government also made provision whereby the commission could undertake the development of certain coal areas on the west coast of the island, adjacent to the railway line, for the purpose primarily of affording a supply for the operating of the line, and, secondarily, for the utilization of any surplus for general economic purposes, if a report by a Canadian Government geologist whose services were requested was favorable. He came to the island, examined the area, and reported in sufficiently encouraging terms as to its possibilities to warrant the authorities in undertaking work upon it, and this in a preliminary stage has been started, and five large motor trucks, each weighing two tons and to carry five tons of coal, have been bought and taken to the scene, to be used in getting the coal to the main line of the railway, four miles distant. It is hoped to accomplish this the present autumn before snow falls, but otherwise next spring, as the road to the mine is but newly built and rough in construction and could hardly be utilized during the severe winters of this region.

The commission has cut off all passes to legislators and others, and is working on the basis that everybody who travels on the railway, no matter what his state or condition, must pay his fare. It also proposes to begin next spring the running of a daily trans-insular service, which was in effect for two years before the war, but was then abandoned until last year, when it was resumed; but it was dropped again this year on the ground that there was a shortage of rolling stock.

The commission has also re-arranged the terminals and ports of call for the various coasting steamships, and expects to effect substantial improvements in this way.

What the net result will be it is difficult to say. The saving which the cancelling of passes would represent is but small and can only be a drop in the bucket as compared with general expense of the service, though the step meets no criticism. As against it, however, the employees of all branches of the railway

may be followed by a similar arrangement. The Government had to pay for the experiment, but the cost was not too great. The experiment was a success, and the Government was able to save a large sum of money. The experiment was a success, and the Government was able to save a large sum of money.

The view is expressed in non-political quarters that the Government is taking a big risk in associating itself too closely with the operation of the railway in the light of the experience of Canada and the United States in this very same proposition. The U.S., it is argued, had to abandon the experiment within two years after having sunk a billion dollars therein. Canada began exactly as Newfoundland, by appointing government members on a board of directors to operate the Canadian Northern Ry., and had as a result to advance such large sums of money to finance the project that it had to take the line over altogether, doing somewhat the same thing with the Grand Trunk Ry., and now finding itself with an annual liability that may be this year \$1,000,000,000.

As shown already, the cost of operating the Newfoundland Ry. alone was to the Reids for the fiscal year 1918-1919 about \$500,000. That, it is understood, did not include the operating of the steamships, and it is not believed here that these could have been operated at a profit. The steamships the Government is operating in addition to these, are likewise believed to be unprofitable, and many people expect that a year from now, when the figures of the working of the combined system are available, they will show a shortage staggering in its proportions.—Montreal Star.

Automatic Train Control Committee.

At a recent meeting, at New York, of the joint committee on automatic train control, which was appointed by President R. H. Ashton, of the American Railway Association, the following appointments were made:—Chairman of committee, C. E. Denney, Vice President and General Manager, New York, Chicago & St. Louis Rd.; vice chairman for operating division, T. H. Beacom, Vice President and General Manager, Chicago, Rock Island & Pacific Ry.; vice chairman for engineering division, A. M. Burt, Assistant to Operating Vice President, Northern Pacific Ry.; vice chairman for mechanical division, J. T. Wallis, Chief of Motive Power, Pennsylvania System.

The duties of the joint committee are

to confer with the Interstate Commerce Commission to prepare a plan for the installation of automatic stops. Under the Transportation Act, the Interstate Commerce Commission has authority to order any carrier, upon two years notice, to install automatic stops and train control, if it is shown to be in the public interest.

Co-ordination of Station Services, C.N.R. and G.T.P.R.

Under the general plan of co-ordination of Canadian National and Grand Trunk Pacific Railways at points where both lines have had stations heretofore, and where rail facilities will permit, but one station will be used for passenger business, and all passenger trains will operate in and out of such stations. The stations to be used are: at Yorkton, Sask., G.T.P.R.; Canora, Sask., C.N.R.; Saskatoon, Sask., C.N.R.; Moose Jaw, Sask., C.N.R.; Battleford, Sask., C.N.R.; Prince Albert, Sask., C.N.R.; Portage la Prairie, Man., G.T.P.R.

At Regina, Sask., separate stations are still maintained. All G.T.P.R. trains and C.N.R. Regina-Gravelbourg trains 53 and 54 operate to and from the G.T.P.R. station. All other trains operate to and from the union station.

Port Arthur-Fort William-Sioux Lookout, Ont., trains 181 and 182 now oper-

ate between Port Arthur and Sioux Lookout, and to and from the C.N.R. passenger stations at Port Arthur and Fort William, and the use of the C.P.R. Fort Williams station by them has been discontinued.

Irish Railway Operation Discontinuances.

The following, reproduced from the Railway Magazine, London, Eng., is a sample of advertisements which have been appearing in Irish newspapers recently.

Great Northern Railway of Ireland.

Owing to the refusal of certain members of the company's staff to carry out their duties, a state of affairs has arisen which necessitates the closing of portions of the line for public traffic.

In addition to the Bundoran Branch the following sections of the line will be closed for passenger, goods, and live stock traffic ON AND FROM MONDAY, SEPT. 20, 1920:—

Dundalk to Enniskillen;
Carrickmacross Branch;
Cotehill Branch.

(Then follows a list of trains discontinued.)

For full particulars see posters at stations.

JOHN BAGWELL, General Manager.
Dublin, Sept. 15, 1920.

Numbering of Canadian National Railways Locomotives.

A subscriber wrote Canadian Railway and Marine World recently as follows: "I would appreciate it very much if you could advise me what system the Canadian National Ry. have adopted in re-numbering locomotives of the Canadian Government, Canadian Northern and other lines absorbed by the Canadian National. I know the Pacific type is 5000 to 5999, ten-wheel type 1000-1999, etc., but would like information to cover all classes, consolidation, Sante Fe, switch, road, etc."

The Canadian National Ry. Mechanical Department has furnished us with a copy of its general scheme of locomotive classification, in tabular form, as follows:—

Class	Type	Wheel
A	Main line	4-6-2
B	Freight	4-6-2
C	Freight	4-6-2
D	Freight	4-6-2
E	Freight	4-6-2
F	Freight	4-6-2
G	Freight	4-6-2
H	Freight	4-6-2
I	Freight	4-6-2
J	Freight	4-6-2
K	Freight	4-6-2
L	Freight	4-6-2
M	Freight	4-6-2
N	Freight	4-6-2
O	Freight	4-6-2
P	Freight	4-6-2
Q	Freight	4-6-2
R	Freight	4-6-2
S	Freight	4-6-2
T	Freight	4-6-2
U	Freight	4-6-2
V	Freight	4-6-2
W	Freight	4-6-2
X	Freight	4-6-2
Y	Freight	4-6-2
Z	Freight	4-6-2

Each of these classes is sub-divided J-1, J-2, K-1, K-2, etc. Locomotives that are of radically different design and size are put in different sub-classes, but when there are two or more classes which are all of the same general design, but merely differ in details, a further sub-division is made, as for instance, J-1-a, J-1-b, K-1-a, K-1-b, etc., so that the classification symbol on the cabs of locomotives shows not only the type but the class and sub-class of each, and this classification symbol is used instead of the locomotive numbers in referring to any particular class of locomotive.

Miscellaneous types are classified under the class letter X, which includes any narrow gauge locomotives, no matter

42 in. or less	77000 to 77999
42 in. or less	78000 to 78999
42 in. or less	79000 to 79999
42 in. or less	80000 to 80999
42 in. or less	81000 to 81999
42 in. or less	82000 to 82999
42 in. or less	83000 to 83999
42 in. or less	84000 to 84999
42 in. or less	85000 to 85999
42 in. or less	86000 to 86999
42 in. or less	87000 to 87999
42 in. or less	88000 to 88999
42 in. or less	89000 to 89999
42 in. or less	90000 to 90999
42 in. or less	91000 to 91999
42 in. or less	92000 to 92999
42 in. or less	93000 to 93999
42 in. or less	94000 to 94999
42 in. or less	95000 to 95999
42 in. or less	96000 to 96999
42 in. or less	97000 to 97999
42 in. or less	98000 to 98999
42 in. or less	99000 to 99999

It will be noted that the various types of locomotives, such as consolidation, Pacific, 10-wheel, etc., are sub-divided, and these sub-divisions are governed by the diameters of the drivers. For instance, in classifying Pacific type locomotives, all with drivers 70 in. or less are in class J, and all with drivers over 70 in. in diameter are in class K.

what their particular type may be, also saddle tank locomotives, type 0-4-0, and any other odd types which do not come under any of which may be called the standard types.

The C.N.R. has no mountain type locomotives, no class letter has been assigned to them, but nos. 6000 to 6999 have been reserved for them.

Improving Car Service on the Northern Pacific Railway.

On account of the extensive territory and widely varying conditions on the Northern Pacific Ry., it must necessarily use different methods best suited to local conditions on each division. Cars are distributed as between divisions by the Superintendent of Transportation, who has his headquarters in St. Paul, Minn. There cars are then distributed locally on each division by a car distributor, who reports direct to the superintendent of that division. Local distribution and local movement of cars is checked by travelling car service agents, who are on the line continuously and who report direct to the Superintendent of Transportation.

Each travelling car service agent is assigned to a territory comprising mileage which he can cover effectively. Each general superintendent has an assistant, who also devotes his attention almost exclusively to checking terminal movements and devising methods for improvement of car service at terminals and at local industries in his territory. All operating officers are working direct with shippers and consignees for more prompt unloading and for prompt and heavier loading. This direct appeal is regarded as more effective than distribution of literature.

The Northern Pacific is getting very satisfactory co-operation from shippers, and is inaugurating a plan of having shippers and consignees advised in advance of arrival of cars for unloading and loading, so that they may be prepared to begin unloading or loading, as

the case may be, promptly when the car arrives. In the case of consignees, this method will frequently avoid delay in placing of car at point where consignee wants it, and also perhaps some delay due to taking up bill of lading in case of freight consigned to "shipper's order."

Grain Inspected at Western Points.

The following figures, compiled by the Dominion Bureau of Statistics' Internal Trade Division, show the number of cars of grain inspected at Winnipeg and other points on the Western Division, during October, and for two months ended Oct. 1920 and 1919:—

	Oct. 1920	Oct. 1920	Oct. 1919
Canadian National Ry.	10,362	15,861	15,745
Canadian Pacific Ry.	23,607	35,292	24,594
Grand Trunk Pacific Ry.	3,095	4,617	6,887
Great Northern Ry.			
(Duluth)	46	117	340
Totals	37,080	55,880	47,566

Telegraph, Telephone and Cable Matters.

As stated in Canadian Railway and Marine World for October, the jurisdiction of G. D. Perry, General Manager, Great Northwestern Telegraph Co., Toronto, has been extended over the Grand Trunk Pacific Ry. telegraph lines. The position of Manager of Telegraphs, held formerly by H. Hulatt, has been abolished. Mr. Hulatt continues as Manager of Telegraphs, G.T.R.

The following appointments have been made in the Great Northwestern Telegraph Co.'s Traffic Department:—General Traffic Superintendent, C. E. Davies, Toronto; Superintendent

of Railway Service, Eastern Division, E. Kenward, Toronto; Superintendent of Railway Service, Western Division, R. M. McMillan, Winnipeg; District Traffic Superintendent, Montreal District, G. H. Walters, Montreal; District Traffic Superintendent, Western Division, B. S. Round, Winnipeg; Chief Electrician, H. K. Clarke, Toronto; Supervisor Wire Service, Geo. T. Trowhill, Toronto; Supervisor of Traffic, C. C. Stewart, Toronto.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Van Bruyssels, Que., and Elsas, Sask. (formerly Endat); and has closed its offices at Perthuis, Que., Agate, Ont., and Darwell, Alta.

The Express Traffic Association calls the attention of shippers to the susceptibility to damage by frost, of shipments during winter, and points out the necessity for better protective packing for fruits, vegetables, flowers, liquids, etc. Shipments are not always carried in heated trains, but are frequently hauled considerable distances in wagons in cities and towns, and are of necessity moved on station platform trucks where heated protection cannot always be provided. The association points out that express companies are not liable for any loss or damage to shipments caused by weather conditions which are beyond their control.

The second anniversary of the signing of the armistice was celebrated by a dinner in honor of returned men now engaged with Dominion Express Co. and attached to Montreal staff. The programme included speech, songs and recitations by local officials and employees. There was present a man who had seen service with the Italian Army, also one who fought side by side with those attached to the U.S. forces. Among the invited guests were: T. E. McDonnell, Vice President and General Manager; V. G. R. Vickers, former Superintendent of Atlantic Division, Montreal; J. J. Murray, General Superintendent, Eastern Division, Toronto; F. W. Branscombe, Superintendent, Atlantic Division, Montreal; H. A. Woodhouse, Assistant Superintendent, Atlantic Division, Montreal; D. Doody, Route Agent, Atlantic Division, Montreal; W. A. Clark, General Agent, Montreal; A. C. Thorn, Agent (in charge of operations), Montreal, and all returned soldiers at present engaged in the Montreal office, 82 in number. Two officials of the Brotherhood of Dominion Express Employees, Grand President Allan Paton, Montreal, and Grand Financial Secretary-Treasurer, J. Donaldson, Toronto, were also invited. C. Benson acted as chairman. The toast to the returned men was proposed by A. Paton and responded to by R. M. Robertson, a late member of the 73rd Royal Highlanders. The dinner was a great success and has sown a seed that will result in bringing together employer and employee in social festivities on more occasions in the future than in the past with a view to maintaining the same high spirit of loyalty and co-operation essential to the successful carrying on of service to the public. W. Frankton and F. Hipkin, of the Montreal city office, were chairman and secretary of the dinner committee.

S. C. Graham, General Yardmaster, Calgary Terminals, C.P.R., writes:—"I would not be without Canadian Railway and Marine World, as there are so many interesting articles therein."

Grain in Store at Elevators.

Grain in store at public terminal elevators, interior terminal elevators, country elevators in Western Division, and public elevators in east, also at U.S. Atlantic seaboard ports. Prepared by the Dominion Bureau of Statistics, Internal Trade Division.

†Week ending Oct. 29th, 1920.

Electric Railway Department

The Ontario Hydro Electric Railways Enquiry.

Mr. Thomas Hutchinson, chairman of the Commission appointed by the Ontario Government to enquire into the Hydro Electric Power Commission of Ontario's financial affairs, issued the following statement Nov. 16: "The members of the Radial Railway Commission, who met after their last public meeting on Oct. 26, visited the New England area with the view of ascertaining the evidence already taken as to some extent analogous to, or comparable with, the lines of radial railways in Ontario in question, and other lines, and to make enquiries as to cost of construction, stock and bond issues, upkeep, maintenance and passenger and freight revenue. In the course of their investigations they met and conferred with the managers and operating officials of the railways. It is the intention of the commission, if possible, to call several of these men and obtain their experiences and expert testimony. They have also retained F. P. Gutelius, an experienced railway engineer and operating expert, to investigate and report on the questions involved in the enquiry, and to give evidence, if deemed advisable, before it. They have also secured the services of the firm of auditors, Price, Waterhouse & Co.

"When the Commission adjourned, it was expected that a public meeting, for the purpose of continuing taking evidence would be held at the end of this week, or the beginning of next, at which W. S. Murray, the engineer who made a report to the Hydro Electric Power Commission in May last with reference to the proposed construction of the Toronto and Bowmanville, the Toronto, Hamilton and Niagara Falls and the Hamilton, Guelph and Elmira radials, would be called, and certain other witnesses. It has been found impossible to secure their attendance before Nov. 22, when the next meeting will be held."

The commission appointed by the Ontario Government resumed its sittings in Toronto Nov. 22, the first witness called being W. S. Murray, Consulting Engineer, New York, who made a report as the Hydro Electric Power Commission of Ontario's Railway Projects in May at Sir Adam Beck's request. His evidence was largely a defence of his report. On subsequent days, up to Nov. 24, when this matter was written, other witnesses examined were C. E. Friend, Comptroller, Canadian National Rys., who testified in regard to Niagara, St. Catharines & Toronto Ry. and Toronto Suburban Ry. earnings, etc.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry., and E. P. Coleman, General Manager, Dominion Power & Transmission Co., who gave information in regard to their respective lines. The principal examination of witnesses was conducted by I. F. Hellmuth, K.C., counsel for the Government commission, the cross examinations being made by R. A. Mackay, K.C., representing the Ontario Hydro Electric Railway Association, and R. S. Robertson, representing municipalities either opposed or not interested in the hydro electric railway projects.

Regina Public Utilities' Deficits.

The Regina, Sask., city aldermen met as a special committee recently, to discuss the deficit in the operation of the city's public utilities for the current financial year. It was reported that the civic utilities, which include the municipal railway, the electric lighting and power plant, and the waterworks, showed a deficit for the nine months ended Sept. 30 of \$115,000, and that it was expected that with the installation of the new unit at the power house the deficit would be redeemed by the end of the year. Commissioner Thornton expressed the opinion that the deficit on the light and power plant might be reduced from about \$66,000 to about \$20,000 by the end of the year.

The deficit of the municipal railway for the nine months ended Sept. 30 was reported to be \$46,000, and Commissioner Thornton is reported to have expressed

Canadian Electric Railway Association.

Honorary President, Lieut.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co.

Honorary Vice President, Acton Burrows, Proprietor and Editor, Canadian Railway and Marine World.

President, A. Gaboury, Superintendent, Montreal Tramways Co.

Vice President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Honorary Secretary-Treasurer, pro tem, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.

Executive Committee, The President, Vice President, and F. D. Burpee, Manager, Ottawa Electric Railway Co.; C. C. Curtis, Manager, Cape Breton Electric Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Railway Co.; Geo. Kidd, General Manager, British Columbia Electric Railway Co.; M. W. Kirkwood, General Manager, Grand River Railway Co. and Lake Erie & Northern Railway Co.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Railway Co.; E. M. Reade, Superintendent, Quebec Railway Light & Power Co.; Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Railway Co.; C. L. Wilson, Assistant Manager, Toronto & York Radial Railway Co.

Official Organ—Canadian Railway and Marine World, Toronto.

the opinion that, given favorable conditions, the deficit might be reduced to \$36,000 by Dec. 31.

A report from D. W. Houston, Superintendent of the municipal railway, which was considered, is reported to have stated that the weekly average receipts for three months ended April 30 were \$20,000, compared with \$16,500 for the three months ended July 31 and \$13,694 for the three months ended Oct. 31. These figures were for the second week only in each of the months and excluded returns for Saturdays and Mondays, which are very variable. The people generally, the report added, were not patronizing the street railway as they should. Mr. Houston suggested that better results would be secured if citizens, instead of paying the deficit in taxes, were to use the money for riding on the cars when they would reap the additional advantage conferred by the service given.

British Columbia Electric Railway Fares and Expenditures.

Geo. Kidd, General Manager, British Columbia Electric Ry., is reported to have said in a recent interview that until the question of whether the company's lines are to remain under the Board of Railway Commissioners' jurisdiction or not is settled, no capital expenditures will be made. He is also reported to have said:—"Since the 6c. fare went into effect about \$1,225,000 has been granted in wage increases. Last year wages and salaries totalled \$3,452,565, and the increase which went into effect on Oct. 1 amounted to \$250,000. There are 2,600 employees. To think of a 5c. fare would be impossible. Few street railways are operating on a 5c. fare today. The recent increases in wages make it impossible to return to the 5c. fare. Some effort should be made to stabilize the company's revenue, either by agreement or by other methods. The further raising of fares is not under consideration by the company.

Winnipeg Electric Railway Preferred Stock Issue.

The Winnipeg Electric Ry. is issuing \$3,000,000 cumulative 7% stock preferred as to dividends and assets, which will make its capitalization as follows:—

	Authorized.	Out-standing.
Common stock	\$1,000,000	\$1,000,000
7% Preferred stock (this issue)	\$2,000,000	2,000,000
Bonds and debenture stock (including subsidiaries)		10,245,000

The stock is being offered at 90, yielding 7 1/2%, with a bonus of 30% common stock. Following are extracts from the prospectus issued by Nesbitt, Thompson & Co., Montreal.

The company does a power, lighting and gas business, and operates the entire street railway system of the City of Winnipeg, consisting of 120 miles. It has a hydro electric development of 33,000 h.p. capacity and an auxiliary steam plant of 13,000 h.p. In addition the company controls a large undeveloped water power capable of 170,000 h.p. development capacity. The franchises, we consider, are very satisfactory.

The properties (exclusive of the large undeveloped water power), were valued by the Manitoba Public Utilities Commission at \$24,369,431. This replacement value is equivalent to over \$450 a share for the preferred stock, or about \$100 a share for the common stock.

Average annual net earnings for the three pre-war years ended Dec. 31, 1914 (which would have been available for dividends on the present issue of preferred stock), were \$1,148,193. Average annual net earnings for the three years ended Dec. 31, 1919, under very adverse and war conditions, which would have been available for dividends on present issue of preferred stock, were \$496,637.

Preferred stock dividend, \$210,000 (equal to almost two and one half times preferred dividend).

Estimated net earnings for current fiscal year, based on actual figures for first eight months, are \$630,000 (equal to three times preferred dividend).

The Public Utilities Commissioner au-

thorized the company to increase its street railway fares to 7c. cash or 4 tickets for 25c., and to increase the price of gas to \$1.75 per 1,000 ft. as from Sept. 1, 1920, and made the following statement in connection therewith: "To ensure continuance of a satisfactory service the rate must be such as will be attractive to investors. In my judgment 8% is the proper rate to fix."

The management of the company was taken over in Oct., 1917, by A. W. McLimont, who possesses a broad experi-

ence in the operation of public utility companies. Since his inception as Vice President and General Manager, the progress of the company, both as regards the goodwill of its patrons, and from an operating standpoint, has been very gratifying.

The proceeds of this issue will be used to retire notes and bank loans. With these paid off it is expected that the company will be in a position to recommence payment of dividends on its common stock within a reasonable time.

The Question of Jurisdiction Over British Columbia Electric Railway.

The British Columbia Electric Ry. applied, last summer, to the Board of Railway Commissioners, for approval of a tariff of commutation fares. The Chief Commissioner expressed himself as not being altogether satisfied that the Railway Act, as amended and consolidated in 1919, placed the company under the Board's jurisdiction, inasmuch as the company's undertaking had not been declared a work for the general advantage of Canada, and in order to satisfy himself as to the Board's jurisdiction, he submitted a stated case to the Supreme Court, a draft copy of which has been furnished Canadian Railway and Marine World as follows:—

"In the matter of the application of the British Columbia Electric Ry. Co., Ltd., for approval of tariff of commutation fares, B.C.E.R. 30, C.R.C. 21, between points on its Central Park line, District 1, between Vancouver and New Westminster. The following case is stated by the Board of Railway Commissioners for Canada for the opinion of the Supreme Court of Canada:

"1. The company was incorporated in England, under the Imperial Companies Act, 1862 and 1893, with head office in London, and was licensed under the B.C. Companies Act to carry on business in B.C., with its head office at Vancouver, for the purpose (among other things) of taking over and acquiring all the business, franchises, rights, powers, and all the other assets of the Consolidated Ry. Co., a company incorporated by special act of the B.C. Legislature by 57 Victoria, chap 56, being The Consolidated Railway and Light Company's Act, 1894, which act was amended and consolidated with certain other acts by special act of the B.C. Legislature by 59 Victoria, chap. 55, being The Consolidated Railway Company's Act, 1896.

"2. The B.C. Electric Ry. Co. has leased and operates, as part of its system, the railway lines Vancouver & Lulu Island Ry. Co. and the Vancouver, Fraser Valley & Southern Ry. Co., the undertakings of which companies have been declared by Parliament to be works for the general advantage of Canada.

"3. That, so far as the operation by the B.C.E.R. Co. of the Vancouver & Lulu Island and the Vancouver, Fraser Valley & Southern Ry. is concerned, it is admitted that such operation is under the Board's jurisdiction.

"4. Sec. 6, par. (c), of the Railway Act, 1919, provides as follows:—

"Every railway or portion thereof, whether constructed under the authority of the Parliament of Canada or not, now or hereafter owned, controlled, leased, or operated by a company wholly or partly within the legislative authority of the Parliament of Canada, whether such ownership, control, or first mentioned operation is acquired or exercised by purchase, lease, agreement, or other means whatsoever, and whether acquired or

exercised under authority of the Parliament of Canada, or of the legislature of any province, or otherwise howsoever; and every railway or portion thereof, now or hereafter so owned, controlled, leased, or operated shall be deemed and is hereby declared to be a work for the general advantage of Canada."

"5. By act of the Parliament of Canada, passed in 1920, chap. 65, it was provided as follows:—

"Sec. 6 of The Railway Act, 1919, chap. 68 of the statutes of 1919, is amended by adding thereto the following subsection:—

"2. The provisions of paragraph (c) of this section shall be deemed not to include or apply to any street railway, electric suburban railway or tramway constructed under the authority of a provincial legislature, and which has not been declared to be a work for the general advantage of Canada otherwise than by the provisions of the said paragraph. Provided that this subsection shall not affect or come into force with respect to any street railway, electric suburban railway, or tramway in the Province of British Columbia until the expiration of one year from the passing of this act."

"6. Objection has been taken to the jurisdiction of the Board to deal with this application, on the ground, shortly stated, that a general provision, declaring the undertaking of unnamed companies' works for the general advantage of Canada, is not effective to bring such companies within the legislative authority of the Parliament of Canada, and therefore under the jurisdiction of the Board; that such declaration to be effective must be made in express words, specifying particularly the company or companies sought to be affected.

"7. The question which the Board, in pursuance of the powers conferred upon it by the Railway Act, 1919, submits for the opinion of the Supreme Court of Canada is: 'Whether, under the above facts and legislation, those portions of the system of the B.C.E. Ry. Co., other than the Vancouver & Lulu Island and the Vancouver, Fraser Valley & Southern Ry. Companies, wholly situate in the Province of British Columbia, have been declared by Parliament to be a work or works for the general advantage of Canada, or whether specific reference to the company in the foregoing legislation will be necessary for that purpose?'"

The matter came before Mr. Justice Anglin, of the Supreme Court, at Ottawa, Sept. 29, who ordered that it be provisionally set down for hearing at the end of the western list of cases inscribed for the Court's autumn session, notice of the hearing to be given to all parties who appeared on the application to the Board of Railway Commissioners and that any parties desiring to file factums do so before Oct. 20.

We were officially advised Nov. 18 that there was not time for the parties to prepare and file their factums for the Supreme Court's October session, and, by consent, the case was enlarged and will probably be heard at the February sittings.

Winnipeg Street Railway Situation.

From Winnipeg Electric Railway Public Service News.

The story is told of the fly that, riding on the wheel of a racing chariot, exclaimed "My! what a dust I am raising." The professional trouble makers and others who seek to ride into public favor at the expense of the public utilities are very much like the fly.

The efforts to create an unreasonable opposition to what is, perhaps, Winnipeg's most important utility—the street railway—is contrary to the spirit of united effort which is so generally urged at this time. During this period of reconstruction there should be no divided interests in matters that are so close to the public welfare and to the progress of any community as its street railway system.

The trend of events in every section of the country shows that municipalities are awakening to the fact that street railways should be treated as friends and not as enemies. Where this spirit is dominant it is significant that the service is the best, that extensions are proceeding and the needs of the community served to the best advantage. If, in Winnipeg, the street railway service is not to be lessened, if general business development is not to be stunted, the street railway problems, which are of necessity the problems of the city, must be approached in a spirit of honest co-operation and in a desire to give careful and fair minded consideration to all the facts. There must be sane discussion and common sense. It is easy to criticise, it is easy to cripple, but it is a difficult thing to build for the future.

The street railway must have the co-operation of the public if it is to grow, and likewise nothing can deaden the progressive movement of Winnipeg so much as the stagnation of its street railway.

Rows make good newspaper copy, and co-operation does not, but in the long run the public, through its representatives, and the street railway will have to pool their interests and pull together if either is to prosper—and they will not prosper separately.

Canadian Street Car Fares.

A very small percentage of car riders in Winnipeg pay the cash fare of 7c. Most of them buy tickets which give them their ride for 6¼c. Compared with many other cities in Canada and the United States, Winnipeg's street car fare is low. In the United States 170 cities have 7c. fares, 55 cities have 8c. fares, and in 26 cities the rate is 7c. with 1c. extra for transfer. The number of cities in which the fare is 10c. is now approaching the one hundred mark.

We have just had compiled a list of street car fares in cities in Canada. This compilation shows that in Sydney, N.S., Lewis, Que., and on the Regina, Calgary and Saskatoon municipally owned lines, the rate of fare is 10c., with no reduced tickets except for children.

Sherbrooke, Que., has an 8c. fare, while the following cities have a 7c. fare:—Quebec, Fort William (municipally owned), Halifax, Montreal and Edmonton. In the last city, the street railway is municipally owned and the city commissioners have applied for a 10c. fare because the 7c. fare did not meet the cost of giving service.—Winnipeg Electric Railway Public Service News.

Answers to Electric Railway Questions.

Equipment Standardization. — Please furnish a list of simple equipment parts which in your opinion should be standardized.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.:— Brake heads and hangers (to conform with A.E.R.A. standard shoes). Journal boxes, wedges and check-plates. Motor bearing liners (for standard sizes of axles and motors) and system of lubrication.

Trolley wheels—depth and contour of grooves and dimensions of hub and pin.

Standard flexible cables for car wiring and motor connections—for each standard rating of motor, including insulation for 600, 1200 and 1500 volts.

Schedule Speeds.— Please furnish a statement of the schedule speed on three of your typical routes in city operation, representing respectively a high, medium and slow speed line. Please furnish speed both with and without layover and for both base and rush-hour schedule.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.:— During morning hours, 6 to 10.30 a.m., speed without layover, 10.2 miles an hour. With layover, 9.3 miles an hour.

Normal time throughout day, 9.3 miles an hour without layover and 8.8 with layover.

Evening rush, 8.4 without layover and 7.8 miles an hour with layover.

Owl cars (after midnight), 11.2 miles an hour without layover. (No layover provided for after midnight.)

Street Railway Fare Advances.

The Cleveland, Ohio, Ry. has increased its fares from 5c. to 6c. cash, or 9 tickets for 50c., with a charge of 1c. for transfers.

The residents in 345 United States cities with a population of over 22,000, 000 people are now paying street car fares of 7c. or more. Six and a half million people pay 10c. cash.

Illinois Public Utilities Commission has sustained the 8c. street car fare in Chicago and made it permanent. The city opposed the application and asked that the franchise rate of 5c. be restored.

Italian street car fares have been raised in the day time from 6c. to 9c., and at night from 8c. to 15c. It is said that a ride on a night street car now costs 50% more than a ride in a cab prior to the war.

Manchester, Eng., has a municipal tramway system. According to official figures it has, for the past two years, been losing at the rate of \$20,000 weekly. To increase revenues, the length of zones has been reduced.

A short time ago it was found that the 6c. fare in Kansas City, Mo., was not sufficient to permit the company to meet operating expenses, and so it was advanced to 8c. But even this fare failed to produce the revenue required and the company went into bankruptcy. The press and public bodies of Kansas City are criticising those who permitted the city to receive such a black eye, and are loud in deploring the situation.

Two weeks ago street car fares in Philadelphia were raised from 5c. to 7c. One week ago car fares in Cleveland were boosted to 6c. Both these cities have been freely referred to by press and public as "low fare cities of the continent." Speaking about Cleveland, reminds us that Cleveland riders do not have to include any such enormous franchise taxes and paving obligations in their car fares as Winnipeg car riders do. This Cleveland Street Ry. operates under an ideal franchise. In Cleveland the rider pays for a ride. In Winnipeg

he not only pays for a ride, but helps to pay for a paving block and a tax bill every time he boards a car. It's not the company's fault. It's the law.—Winnipeg Railway Public Service News.

London Street Railway Situation.

The Ontario Railway and Municipal Board is reported to have advised the London, Ont., city council that the results of the operation of the line during October were that after paying the conductors and motormen the guaranteed maximum wages of 48c. an hour, and after making provision for bond redemption and other charges, there was a surplus of \$17.36.

It is only out of any surplus so remaining that any increase of wages can be given the men. The men agreed to operate the cars for a certain time at maximum rate of 48c. an hour, with a hope of getting an increase to 52c. The Ontario Railway and Municipal Board, which continues to operate the line, has never had anything in the way of a surplus which would justify the granting of any proportion of the increased wages asked, with the result that the whole question of wages is still unsettled. The men continue to threaten to strike, but have not done more than threaten up to date. It is claimed that the Ontario Railway and Municipal Board may abandon the accumulation of the necessary amount for the redemption of bonds and so release a considerable sum for an increase of wages. However, nothing has been done; the line is still being operated, and developments are being awaited by all parties.

Hydro Electric Power Commission of Ontario's Railway Projects.

Several matters in connection with the proposed electric railway lines into Hamilton came up for discussion between F. A. Gaby, Chief Engineer, Hydro Electric Power Commission of Ontario, and the city council's railway committee Nov. 13. The particular matter considered was the entrance of the provincial highway into the city, and its relation to projected electric railway construction. It was decided to ask the Ontario Highway's Department to reconsider its plans for taking for a highway entrance the route planned for the electric railway entrance. Some other matters in connection with bridges were discussed, but it was stated that nothing definite could be settled until after the Royal Commission on the hydro electric radial railway's projects reports.

Representatives of municipalities within which the Niagara, St. Catharines & Toronto Ry. operates, met at Thorold, Nov. 12, to decide what steps should be taken to have the N., St. C. & T. Ry. made part of the projected hydro electric radial railway system in the Niagara peninsula.

A press report states that arrangements the Hydro Electric Power Commission are being made for a meeting by municipalities between Port Burwell and London, as to plans for building of an electric railway.

A plan showing the proposed route of the Toronto Eastern Ry. through the City of Toronto and York and Scarborough townships is reported to have been filed in the country registry office. The line will, it is said, start at the foot of Bay St. and will run east on private

right of way on land to be made by the Harbor Commission. After crossing the Don the road will run along Keating St. nearly to Leslie St., where it turns slightly north and runs through a block between Leslie St. and Morley Ave. south of Eastern Ave., which has already been acquired by the Hydro Electric Power Commission. The route laid out continues northerly and easterly to Danforth Ave., and then easterly across blocks of unbuilt-on property, a good deal of which, however, is laid out for building lots—leaving York Tp. at Dawes Road, and then across Scarborough Tp. to Scarborough Jct.

Guelph Radial Railway Matters.

We are officially advised that the Guelph, Ont., City Council has decided to terminate the agreement between the city and the Hydro Electric Power Commission of Ontario, under which the Commission was to acquire the railway. This course, we are advised, is rendered necessary because of the Ontario Government's decision that until all the municipalities interested in the Hamilton-Guelph-Elmira hydro electric railway line project have voted to include the Guelph Radial Ry., it cannot approve of the proposed purchase.

The city council has decided to apply at the next session of the Ontario Legislature for permission to increase the Guelph Radial Ry.'s capital stock by \$250,000, and to increase the fares from 5c. cash or 6 tickets for 25c., to 7c. cash or 4 tickets for 25c., and double fares after 11 p.m. The fares on the line are fixed by statute, and can therefore only be changed by statute.

The city council intends, provided assent is given by the Ontario Government, to submit to the ratepayers a question asking them whether they wish the municipality to operate its own electric railway, or whether they wish the Hydro Electric Power Commission of Ontario to operate it under existing arrangements; and, in addition, whether they would care to have the city enter into an agreement with the C.P.R., satisfactory to both parties, for the operation of the municipal railway.

In connection with the suggestion as to the C.P.R. operating the line, F. L. Wanklyn, General Executive Assistant, C.P.R., has written a city official that as citizens had voted against entering into a contract with the C.P.R. in Aug. 1919, the company has no wish to reopen negotiations in any way.

The Hydro Electric Power Commission of Ontario is reported to be ready to enter into a contract for the operation of the line.

Negotiations for sale of Toronto Railway, etc.—The Toronto City Council will meet specially, Dec. 1, to receive a report on negotiations for the purchase of the electric railway, power and light interests of the Toronto Ry., and its subsidiary and allied companies, by the City of Toronto and the Hydro Electric Power Commission of Ontario.

Lambeth Motor Transport Co. was inaugurated about two years ago to carry freight and passengers between Lambeth and London, Ont., following the abandonment of the London & Lake Erie Ry. and Transportation Co.'s electric line. A meeting of shareholders was called to be held in Lambeth, Nov. 12, to consider the company's financial position and to decide relative to its being wound up.

Calgary Municipal Railway's Finances.

The Calgary City Council, at its 10th meeting, on Dec. 1, 1920, authorized the Mayor to issue bonds for the purpose of raising the sum of \$265,000 to cover over-expenditure on capital account of the street railway company. The Mayor, in his report, stated that the City of Calgary had expended on the street railway system the sum of \$1,391.39 for handling and store charges on rails for the Center St. extension, and \$1,098.45 for similar charges on other street railway material and switches. The total cost of the intersection at Center St. was reported to have been about \$51,000.

The city's request to the Alberta Public Utilities Commission for authority to issue bonds for the amount mentioned in the bylaw has been considered, and the Commission's Secretary wrote the Mayor, Nov. 4, as follows:—"In reference to the application made by you on behalf of the city for permission to issue debentures to the amount of \$265,000 to cover over-expenditure on capital account of the street railway company, I am directed by the Board to indicate the Board's position in regard to it. It is desired in the first place to point out that the city's application is made after the expenditure has actually been incurred, and that the time for any application for permission to borrow on debentures should be made before the expenditure of the money, and not afterwards. It will be readily seen that the course adopted by the different councils of the City of Calgary within the last few years is entirely contrary to the spirit, not only of the Public Utilities Act, but also of the Calgary city charter.

"The city charter provides that all money bylaws will be first submitted to the burgesses, while the Public Utilities Act provides that all applications for approval of debenture issues shall be made to the Board of Public Utility Commissioners prior to, or immediately before, the first reading of the bylaw. Both these provisions provide a check upon the expenditure of monies by the city council, and it will be seen that if the money is first expended, and the appro-

val of the funds and the amount of the ratepayers is afterwards sought, the power to prevent the expenditure is rendered practically ineffective. While the Board desires, therefore, to express its disapproval of the course followed in this instance, as well as to indicate that consideration of applications of this nature is liable to be refused in the future, it is willing to consider the present application apart from the objection just mentioned.

"The proposed debenture issue is to cover capital expenditure made on the street railway system during the last seven years or so. From the statement submitted to the Board and from the information derived at the Board's interview with you and Mr. Brown, it appears that out of the amounts covered by proposed debentures \$158,216.61 was taken from the depreciation fund of the street railway, and a further \$98,992 was taken from what was termed the surplus revenue account of the railway. It appears, however, that in 1914 or thereabouts the amount to be set aside annually on account of depreciation was so reduced as to fail to meet the requirements of the depreciation account. In other words, what was placed in this surplus revenue account during this period was placed there at the expense of the depreciation fund. The whole amount, therefore, covered by the proposed debenture issue represents the impairment of the railway company's depreciation account.

"If, therefore, the Board approves of the whole issue, it must be on the understanding that the whole proceeds will be placed in this depreciation account. If the council does not desire to do this the Board is willing to approve of a portion of this amount to the extent of \$158,216.61, which is the amount by which the actual depreciation account is shown to be now impaired, without taking into account any insufficiency in the amount hitherto set aside for this purpose. It will be understood, of course, that the proceeds of any such issue are to be placed in the depreciation account."

The letter from the Public Utilities Commission was discussed at a meeting of the city council, Nov. 8. A letter from City Comptroller W. C. Wood is reported to have been laid before the council stating in effect that the money had not been "taken" from the depreciation account, but had simply been temporarily borrowed. The mayor and several aldermen are said to have expressed the opinion that the Public Utilities Commission's criticism was justified. A resolution was passed for the submission of a bylaw to raise \$265,000 for street railway purposes, and agreeing to the terms outlined in the Public Utilities Commission's letter, viz., that the total capitalization of the expended borrowings shall be placed to the credit of the street railway depreciation account.

Motor Bus Limitations.—English transportation authorities consider motor busses all right up to a certain point, beyond which street cars are imperative. J. B. Hamilton, General Manager of the Leeds Corporation Tramways, said recently: "To serve industrial centers with busses is like taking soup with a teaspoon, or eating haggis with a toothpick." He added that it was economical to use the bus only as a feeder to the city service.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. Co.—At a meeting of the bondholders of the Western Canada Power Co., in Montreal, Nov. 1, a resolution was passed waiving the right to issue any further bonds of the authorized issue of \$20,000,000 authorizing the cancellation of \$1,000,000 of the authorized issue held by the company, and making certain alterations in the trust deed; the resolution to become effective upon the British Columbia Electric Ry. Co. giving an unconditional guarantee of the principal and interest of the \$5,000,000 of the authorized issue of bonds which were sold to the public. The effect of the resolution, when it becomes operative, will be that the company's bond issue will be restricted to the \$5,000,000 now in the hands of the public.

British Columbia Electric Ry. and allied companies:

Winnipeg Electric Ry. Co.—A special meeting of shareholders has been called to be held in Winnipeg, Dec. 4, to ratify a bylaw passed by the directors amending a bylaw to issue \$3,000,000 of 7% cumulative preference stock approved by the shareholders May 3, 1920, by making provision for giving voting powers to the holders of such preference stock, and by providing that no further issue of preference stock in excess of \$3,000,000 shall be authorized unless the authority is obtained of the holders of two-thirds in amount of the preferred stock issued and outstanding, and to ratify a bylaw of the directors increasing the common capital stock to \$11,000,000.

Winnipeg Electric Ry. and allied companies:

	Sept. 1920	Sept. 1919	Sept. 1918	Sept. 1917

Electric Railway Notes.

Winnipeg Electric Ry. is adding 20 cars to its equipment.

The Toronto Ry. is reported as now owning the city \$480,000 for percentages.

The Sherbrooke Ry. & Power Co. has ordered two safety cars from J. G. Brill Co., and will probably order another two in the near future.

Winnipeg Electric Ry. has added 6 snow sweepers to its snow fighting equipment and put them in use during a storm on Nov. 8.

A. B. Lambe addressed members of Ottawa branch, Engineering Institute of Canada at the Hull Electric Co.'s Deschenes car sheds, Nov. 6, on "The common street car."

Winnipeg Electric Ry. was given permission, Nov. 9, by the City Council to operate a limited motor bus service on Notre Dame Ave. West. The permission is said to be merely a temporary one.

Montreal Tramways Co.'s employees who are members of the Union of Tramways Employees are reported to have been discussing the pension system, and to have appointed a special committee to study it.

Winnipeg Electric Ry. winter schedules went into effect Nov. 16, providing for 33 additional runs a day, to take care of the increasing traffic during winter when many motorists and cyclists turn to the street cars.

The London, Ont., City Council has decided to submit to the ratepayers at the annual elections on Jan. 1, 1921, a bylaw to raise \$100,000 to buy motor busses in order to assist in solving the transportation problems there.

T. J. Hannigan, Secretary, Ontario Hydro Electric Railway Association, is reported to have stated, at a meeting in Toronto recently, that the shortage of power in Guelph had been so acute that it had been necessary to cease operating the municipal railway in the mornings, and for two hours in the afternoons.

Calgary Municipal Ry., according to a local press report, is better off, as regards rolling stock, than it has been for a long time. During the past six months, 12 cars have been added to the equipment, six having been bought from Saskatoon Municipal Ry., and six in the U.S. It is now operating 84 passenger motor cars and 6 trailers.

The Amalgamated Association of Electric Railway Employees of America is reported to have announced that a satisfactory re-establishment of the International Union has been effected in Winnipeg. The report adds that the Street Railway Employees Unit, One Big Union, claims to have more than 900 of the 1,000 Winnipeg street car men on its roll.

The Montreal Administrative Commission has declined to act on a suggestion that it arrange with the Montreal Tramways Co. that the hours during which school children's tickets are available should be extended so as to run from 7.30 a.m. to 6.30 p.m. The Commission took the ground that this would be a revision of the contract, which might lead to agitation for other changes in it.

The Port Arthur, Ont., Public Utilities Commission is reported to have decided to remove the telephone pole line from the right of way of the electric railway between Port Arthur and Fort William

to another route to remedy "noisy lines," which are believed to be caused by induction. It is expected that the work will be done next spring.

The new agreement made between the British Columbia Electric Ry. Co. and the Victoria City Council is expected to come into operation Dec. 1. The terms of the agreement as to fares were given in Canadian Railway and Marine World for November, the other matters included, outside the terms for sale of electric light and power, have not been made public.

The assessment of the London & Port Stanley Ry.'s property at Port Stanley, Ont., came before the Ontario Railway and Municipal Board at St. Thomas, Nov. 3. The local assessor increased the assessment of the property in the village from \$31,000 to \$113,000. An appeal was taken to the county court judge, who reduced the assessment to \$89,000, against which the London Railway Commission appealed to the Ontario Railway and Municipal Board, which now has the matter under consideration.

The St. Thomas, Ont., City Council has been considering a bylaw to permit the municipal railway to operate its cars within the city on Sundays, which will be submitted to the ratepayers at the municipal elections on Jan. 1, 1921. The Ontario Legislature passed an act at its last session amending sec. 235 of the Ontario Railway Act, by substituting "15,000" for "50,000," wherever necessary, so as to permit cities of under 50,000 to vote on bylaw to authorize the operation of street cars on Sundays.

Regina, Sask., City Council was asked recently to operate the municipal railway's Eastview extension, and to put on some other services on the lines. Commissioner Thornton is reported to have advised the council that no expenditures should be made, on extensions or additional services, until the lines have been brought to a paying basis. The city commissioners recommended that the additional service be not given, and this has been adopted by the aldermen in committee.

The Quebec Court of Appeal recently dismissed the Montreal & Southern Counties Ry.'s appeal against a judgment of the Supreme Court giving Mrs. J. Dulude \$10,000 damages for the death of her husband, who was killed when knocked from the seat of the vehicle he was driving on Mill St., Montreal. The Superior Court held that under the terms of its contract the company was responsible for the keeping of the street in good order, and that at the time of the accident which resulted in Dulude's death, the road was in very bad order.

Montreal Tramways Co.'s employees have been raising some questions respecting the new form of transfer used, and it is reported that their representatives discussed the matter with some of the company's officials on Nov. 11. The employees state that the new system causes much loss of time and inconvenience to conductors. They say they cannot perform their work efficiently under the present system. The officials called their attention to an official publication issued on Aug. 25, stating that conductors must punch transfers only when they are able to do so without interfering with the collection of all fares.

Toronto Transportation Matters.

The Toronto Transportation Commission is reported to be making extensive investigations into matters connected with electric railway and other methods of transportation, and P. W. Ellis, the Chairman, is said to have stated that in making plans the commission ought to have in view the needs of a city of 2,000,000.

The Transportation Commission, after giving some general consideration to matters submitted to it, applied to the City Council recently for the passing of a bylaw to provide funds for buying motor busses. It is reported that the commission has decided on spending \$1,000,000 upon busses. Several types have been submitted to the commission, one of which, it is stated, would have a speed of 35 miles an hour, and a seating capacity of 82 persons.

Increases in Electric Railway Freight and Passenger Rates

British Columbia Electric Ry. — The proposed fare increases on the Central Park line must await a decision of the Supreme Court of Canada upon the jurisdiction of the Board of Railway Commissioners over the company. An appeal for higher fares on this line between Vancouver and New Westminster was made recently to the Board, but objected to by Burnaby municipality on the ground that the Board had no jurisdiction. The Board has accordingly requested a stated case and the Supreme Court has set it down for February.

The Grand River Ry., and the Lake Erie & Northern Ry., are applying to the Board of Railway Commissioners for authority to increase freight rates 40%, and passenger rates 20%.

Guelph Radial Ry. — The City of Guelph, which owns and operates this line, has decided to apply to the Ontario Legislature, for authority to increase fares from 5c. to 7c. cash, and from 6 tickets for 25c. to 4 tickets for 25c., the present rates being fixed by statute.

Pictou County Electric Co. — Halifax press report:—Some time ago the Pictou County Electric Co., operating in New Glasgow, and with lines connecting the towns of Stellarton, Westville and Trenton, obtained permission from the Nova Scotia Public Utilities Board to raise the fare 5c. to 7c. Recently it applied for permission to charge 10c. Higher costs for equipment and heavy charges for labor are the reasons adduced. The Board reserved its decision.

Winnipeg Electric Ry. — In connection with the Manitoba Public Utilities Commissioners recent decision authorizing the company to increase passenger fares, a deputation from Winnipeg City Council and the councils of the adjacent municipalities in which the company operates, either on its own account or by its subsidiary companies, waited on the Manitoba Attorney General recently and requested that the Government submit a stated case on the constitutionality of the Public Utilities Act to the Manitoba Court of Appeal. A press report states that the Attorney General, in assenting to the request, said that he did not wish that the Government's action should have any effect on the present litigation between the Winnipeg City Council and the company. Another press report states

Marine Department

General Shipbuilding Matters Throughout Canada.

T. K. Bentley, West Advocate, N.S., launched the schooner *T. K. Bentley*, 472 tons net, Oct. 30. She is owned by Bentley & Pugsley, and immediately on completion loaded cargo for Cuba. This is the last ship to be built here for the present, and the yard has been closed.

B.C. Marine Engineers & Shipbuilders Ltd., Vancouver, B.C., which was incorporated recently, as stated in Canadian Railway and Marine World for October, took over the business of B.C. Marine Ltd. on Nov. 1. The officers are Innes Hopkins, Chairman and Managing Director; J. K. McKenzie, General Superintendent; and C. J. Isted, Secretary-Treasurer.

Canadian Allis-Chalmers Ltd., Bridgeburg, Ont.—The steel cargo steamship *North American*, built by this company, which is illustrated on page 678, is a sister ship of the s.s. *South American*. These ships were built respectively for the North American Steamship Co. and the South American Steamship Co., which are subsidiary companies of the American Metal Transport Co., New York. The ships are registered in Canada, and the office of the subsidiary companies is at Toronto, the officers being the same in each case, viz.: President, W. E. Brady; Vice President, F. W. Miller; Treasurer, J. Beatty. The ships are of the same type as those ordered by the Imperial Munitions Board for the British Government during the war, and have approximately 3,500 d.w. tons capacity. The s.s. *South America*, which was completed some little time ago and left the yards early in November for Dalhousie, N.B., was driven ashore during a heavy snow storm on the ledges at Little Cape, about 12 miles east of the Fame Point in the St. Lawrence River.

A Bridgeburg press report of Nov. 23 states that the yard has been closed, and that no intimation has been made as to what use may be made of the plant on the reopening of navigation. Since the reopening of the plant during the later stages of the war, four steel cargo steamships have been built, two for the British Government, under orders from the Imperial Munitions Board, and the two mentioned above, viz., *North American* and *South American*.

Canadian Concrete Shipbuilding Co., North Sydney, N.S.—The concrete ship *Permanencia*, built for W. N. McDonald, Sydney, N.S., is reported to be completed and to have been taken to Sydney, N.S., preparatory to proceeding to Newfoundland on her maiden trip. She is to be operated from Sydney, N.S., to Newfoundland and Prince Edward Island ports. She was built under Lloyd's special survey for the highest rating, and has a deadweight capacity of from 450 to 500 tons, and there is sleeping accommodation for 10 passengers in addition to the crew. The propelling machinery consists of a Bolinder crude oil engine of 240 b.h.p., for a speed of from 9 to 10 knots an hour. Her dimensions are,—length 120 ft., breadth 27 ft., depth 12.7 ft., tonnage 338 gross, 292 net.

Harbour Marine Co., Victoria, B.C., advised Canadian Railway and Marine World recently that the car ferry being built for the C.P.R. will probably be

ready for launching during the first week in December.

L. P. McLean, St. John, N.B., on Nov. 10, launched the three masted schooner, *Peter McIntyre*, 500 tons net, for Capt. P. McIntyre, St. John.

New Burrell Johnson Iron Co., Yarmouth, N.S.—The Dominion Government s.s. *Laurentian*, which has been undergoing repairs by this company for some time, has been completed and she has left the yard for St. John, N.B. The engine and boilers have been thoroughly overhauled, new deck winches of increased capacity, new windlass, steering gear and other deck machinery have been installed. There have also been supplied a new dynamo and lighting system and

5½ x 3 x 6 in. The lighting plant is a Sisson 4 k.w. 55 volt machine. The boat is electrically lighted throughout, and a searchlight is mounted on top of the pilot house.

Prince Rupert Drydock & Engineering Co.—See under "Prince Rupert Drydock & Engineering Co.," on another page of this issue.

Reid Newfoundland Co., St. John's, Nfld.—The Hudson's Bay Co.'s s.s. *Pelican* is being docked here for the winter, and several repairs and a general overhauling will be undertaken. While the ship was in Hudson Strait recently, she encountered heavy ice, and had her bow stove in and her rudder badly damaged.

Three Rivers Shipyards Ltd., Three Rivers, Que.—This company, which is now in liquidation, and which is a subsidiary of the National Shipbuilding Corporation, Wilmington, Del., and also said to be in liquidation, has several claims against it which are being dealt with by the Superior Court. One of the claims heard at the end of October was by La Societe Naphthes Transports, France, for the possession of a steel tank steamship of 6,000 tons. The company placed a contract for the building of this ship with the National Shipbuilding Corporation, and the contract was transferred to Three Rivers Shipyards, Ltd. It is claimed that the ship was to cost a little over \$1,000,000, which was to be paid in four instalments and that \$600,000 has already been paid. Considerable work has been done on the ship, and it is stated that a few weeks work will make her ready for launching. The application for possession of the ship was contested by Molson's Bank, and the liquidator, the former claiming to have a mortgage on all the assets of Three Rivers Shipyards Ltd. The judgment, rendered Nov. 6, is given in full on another page of this issue. Another claim which has yet to come before the court is in behalf of the French government, which seeks to obtain possession of five steam barges, reported to be near completion. The contracts for these are stated to have been given to National Shipbuilding Corporation and transferred to Three Rivers Shipyards Ltd. Other claims which will also be dealt with by the court are as follows:—Crown Trust Co., for possession of company's assets, under a deed of trust for the security of the bondholders; liquidators of National Shipbuilding Corporation, claiming all the company's assets, and General Supply Co. of Canada for possession of certain machinery.

The wooden steamships *Bouxwiler*, *Bouzonville*, *Brumath*, *Cattenon* and *Cernay* have been completed and placed on the Canadian register by the liquidator. These ships were ordered by the French Government, but are in litigation. They are each equipped with wireless, and are screw driven by engines of 48 h.p., and have the following dimensions,—*Bouxwiler*, length 195.3 ft., breadth 40.3 ft., depth 15.2 ft., tonnage 1,138 gross, 660 net; *Bouzonville*,—length 195.1 ft., breadth 40.4 ft., depth 15.4 ft., tonnage 1,135 gross, 658 net; *Brumath*,—length 195.5 ft., breadth 40.1 ft., depth 15.3 ft., tonnage 1,141 gross, 662 net; *Cattenon*,—

Dominion Marine Association.

President, A. E. Mathews, Managing Director, Mathews Steamship Co., Toronto.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Montreal.

Second Vice President, A. A. Larocque, President, Sincennes-McNaughton Line, Montreal.

Executive Committee, W. E. Burke, Canada Steamship Lines, Montreal; T. R. Enderby, Montreal Transportation Co., Montreal; L. Henderson, Montreal Transportation Co., Montreal; W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont.; C. J. Madden, George Hall Coal Co. of Canada, Montreal; Lt. Col. G. P. Murphy, C.M.G., President, Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. E. Sowards, Sowards Coal Co., Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; Jno. Walker, Keystone Transportation Co., Montreal; Lorne C. Webster, Webster Steamship Co., Montreal; J. Wilkie, Imperial Oil Ltd., Toronto; A. A. Wright, honorary member, Toronto.

General Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

all sanitary and heating equipment has been remodelled and brought up to date. While she was on the marine slip a number of new plates and frames were placed in the hull.

Nixon Construction Co., Vancouver, B.C.—The steam tug, which the C.P.R. ordered, together with a tow barge, for service on Okanagan Lake, as mentioned in a previous issue, was launched at Okanagan Landing, Oct. 20. The hull is of coast fir throughout, except the heads, and it is sheathed with cedar, planked with 2½ in. and ceiled with 2 in. coast fir. The hull is salted, and protected with galvanized sheets, 16 gauge, to enable the tug to operate in 10 in. of ice, should it be necessary. The propelling machinery consists of a single set of compound vertical condensing type of engines of 27.3 n.h.p., with cylinders 12 x 3 x 6 in. driving a single screw about 80 in. diam. Steam is supplied by a marine cylindrical type boiler, with two furnaces, at a working pressure of 160 lbs. The condenser is of the jet type 10 x 18 x 12 ins., and there are two duplex pumps, one 6 x 3½ x 7 in. and one

ports, owing to the fact that they are operated out of Canadian ports are subject to an inspection fee of 8c. per ton, but as regards non-passenger ships not registered in Canada there appears to be some doubt as to the matter of inspection fees.

Yarrows Ltd., Victoria, B.C.—W. W. Martin, Works Manager, Yarrows & Co. Ltd., Glasgow, Scotland, was in Victoria recently to look over the plant, and to formulate a plan of expansion. It is stated that the company intends some further development in connection with the building of shallow draft steamships, of which a number were built at Victoria during the war, for use in India and Mesopotamia.

The following Dominion Order in Council 2,711 was passed Nov. 6:—Whereas the Minister of Marine and Fisheries re-

And whereas the Chairman of the Board of Steamship Inspection recommends that authority be obtained for the collection of fees for the inspection of steamships registered other than in Canada, at the same rate as is now required to be paid for the inspection of steamships registered in Canada, applicable to both passenger and non-passenger steamships, dating from June 1, 1920, in which the Deputy Minister of the Department of Marine and Fisheries concurs.—

Therefore, the Governor General in council, on the recommendation of the Minister of Marine and Fisheries and under the provisions of sec. 569 of The Canada Shipping Act, is pleased to order that the fees for the inspection of passenger and non-passenger steamships, registered in Canada, as approved by order in council 1236 of May 31, 1920, shall be and the same are hereby made applicable to similar steamships registered elsewhere than in Canada, dating from June 1, 1920.

With the season of navigation on the Great Lakes drawing to a close, a survey of operations of the Canada Steamship Lines, Ltd., for the period, it was stated officially Nov. 16, discloses earnings of a very satisfactory character and well up to the 1919 level, which constituted a record in the transportation consolidation's history. Net earnings in 1919 were \$4,580,272, the company's fiscal year ending Dec. 31; those for 1920, basing the estimate for November and December on booked contracts and present prospects, will reach approximately \$4,400,000, or well up to the level of a year ago.

The net profit for 1919 was \$2,236,679, after all deductions for fixed charges, depreciation, taxes, etc.; that for this year, barring unforeseen developments, will closely approximate the 1919 result, according to the statements of officials of the company. After allowing for dividends on the \$12,500,000 preferred stock outstanding, necessitating the payment of \$875,000 annually, the 1920 net profit, therefore, represents earnings of approximately 12.5% on the junior securities.

October, officials stated, produced the best results in the way of earnings for any corresponding period in the company's history; the weather conditions prevailing on the Great Lakes were such as to allow the steamships operated there to make quick returns for cargoes, thus greatly facilitating the handling of business offering. The volume of freight available at lake ports, it was stated, is the most substantial for several seasons past and earnings prospects between now and the close of navigation were stated to be of the most satisfactory nature.

Ocean business, on the other hand, showed a shrinkage from the level of last year, but inland traffic neutralized the decline in this respect, it was said. The tourist and other passenger receipts for the 1920 season, which is now practically closed, was the heaviest on record.—Montreal Gazette, Nov. 17.

The ss. North American, built by Canadian Albi-Chalmers Ltd., Bridgeburg, Ont.

the sail area usually carried by ships of this class.

Wallace Shipbuilding & Dry Dock Co., North Vancouver, B.C.—We are officially advised that the C.P.R. has definitely placed a contract for the building of a steel passenger ship for its British Columbia Coast Service, with this company. The general plans and specifications were prepared under the immediate direction of J. W. Troup, Manager, B.C. Coast Service, C.P.R., the working out of the structural design of the ship being left to the builders. The ship is to conform to the requirements of the British Corporation Registry, under special survey, to class B2X with freeboard. The machinery is to be built by the shipbuilding company, under the supervision of James McGown, Superintendent Engineer, Canadian Pacific Steamship Lines. Her dimensions will be,—length 317 ft., beam 48 ft., depth of hold 18½ ft. She will have cellular double bottom, and the hull will be divided by 8 transverse bulkheads. She will be single screw, driven by reciprocating engines, balanced on the Yarrow, Schlick and Tweedie system, for a speed of 16 knots an hour. She is designed for an all around service on the coast. The accommodation will be an-

ports that he has had under consideration a report of the Chairman of the Board of Steamship Inspection, stating—

That under the provisions of secs. 643 and 644 of The Canada Shipping Act, as amended, a scale of fees was approved by order in council of May 31, 1920, P.C. 1236, for the inspection of steamships registered in Canada:

That under the provisions of an order in council of April 11, 1904, a fee of 8c. per ton, gross registered tonnage, is charged for the inspection of passenger steamships inspected in Canada, when such ships are not registered in Canada.

That under the provisions of sec. 569 of The Canada Shipping Act, the Governor in Council is authorized to direct that part 7 of the act or certain provisions thereof shall apply or shall not apply to steamboats registered elsewhere than in Canada and further authorizes the Governor in council to fix a rate or duty for the inspection of such steamboats:

That as the matter now stands Canadian registered steamships, passenger and non-passenger, are subject to a fee for annual inspection and passenger steamships registered elsewhere than in Canada but coming under Canadian in-

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Contracts Signed.—We are officially advised that contract 59, between the Marine Department and the Nova Scotia Steel & Coal Co., for the construction of the s.s. Canadian Sapper; builder's yard no. 8; approximately 2,800 d.w. tons, was signed Oct. 26. Although there was considerable delay in the signing of this contract, the keel was laid May 4, 1920, and the hull launched Nov. 9.

Passenger Accommodation.—The steel cargo steamships, Canadian Fisher and Canadian Forester; Marine Department contracts 15 and 16; builder's yard nos. 7 and 8; each approximately 5,100 d.w. tons; which are being built for Canadian Government Merchant Marine, by Tidewater Shipbuilders Ltd., are being fitted with accommodation for 28 passengers each, to supply the service between Canada, the Bahamas, Jamaica and British

passengers.

Refrigeration Accommodation.—The no. 4 'tween decks in 13 of the steel cargo steamships to form part of the Canadian Government Merchant Marine fleet are being fitted up as cold chambers with refrigerating machinery of 20,000 cu. ft. capacity. The ships, some of which have been finished, the others being under construction and the names of the builders are as follows:—Canadian Exporter, Canadian Inventor, Canadian Prospector, J. Coughlan & Sons; Canadian Victor, Canadian Conqueror, Canadian Commander, Canadian Leader, Canadian Vickers Ltd.; Canadian Highlander, Canadian Skirmisher, Wallace Shipyards Ltd.; Canadian Traveller, Canadian Winner, Harbour Marine Co.; Canadian Cruiser, Canadian Constructor, Halifax Shipyards Ltd.

rine Department contract 45; builder's yard no. 5; approximately 4,575 d.w. tons. This ship was built by the British American Shipbuilding Co., Welland, Ont., and cut in two for taking through the canals to Montreal, where the sections were joined together at Canadian Vickers Ltd. plant. She sailed Nov. 13, for Chicoutimi, Que., to load a full cargo of pulp wood for Rouen, France.

Nov. 17, s.s. Canadian Rover; Marine Department contract 57; builder's yard no. 67; approximately 3,890 d.w. tons; Collingwood Shipbuilding Co., Collingwood, Ont. She sailed from Collingwood Nov. 18, for Erie, Pa., to load coal for Montreal, and will sail from Montreal for Glasgow, Scotland.

The s.s. Canadian Recruit, which went ashore at Vache Point, in the St. Lawrence River, in Dec. 1919, and which was

Steel Cargo Steamship, Canadian Carrier, approximately 4,350 d.w. tons, built for Canadian Government Merchant Marine Ltd., by Port Arthur Shipbuilding Co., Port Arthur, Ont.

Honduras, provided for in the Canada-West Indies trade agreement, entered into at Ottawa in July between the Dominion Government and the colonies mentioned, which calls for a fortnightly service. The accommodation will consist on the upper deck of a dining room $44\frac{1}{2} \times 20$ ft.; and on the bridge deck of a lounge $36\frac{1}{2} \times 14$ ft.; smoking room, $17\frac{1}{2} \times 8\frac{1}{2}$ ft.; two suite rooms, each 10×8 ft.; and 11 staterooms, each $6\frac{1}{2} \times 8$ ft. The suite rooms will each accommodate two persons if necessary, being designed to be either intercommunicating or separate. When intercommunicating the bathroom will open directly to the suite room, or when the rooms are used separately the bath room will open to each suite room from the corridor, or the forward suite room could be used separately and the after suite room in conjunction with the bathroom. Each of the staterooms will accommodate two

Launchings of Steamships.—Since Canadian Railway and Marine World for November was issued, we have been advised of the following launchings of steel cargo steamships for Canadian Government Merchant Marine:—

Nov. 9, s.s. Canadian Sapper; Marine Department contract 59; builder's yard no. 8; approximately 2,800 d.w. tons; Nova Scotia Steel & Coal Co., New Glasgow, N.S.

Nov. 20, s.s. Canadian Harvester; Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons; Port Arthur Shipbuilding Co., Port Arthur, Ont.

Deliveries of Steamships.—In addition to the steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Nov. 12, s.s. Canadian Squatter; Ma-

released in the spring of 1920, having suffered considerable damage, has been thoroughly overhauled and repaired by Fraser Brace Shipyards Ltd., Montreal, was handed over to Canadian Government Merchant Marine Ltd. Nov. 20, for operation, and will take a general cargo to St. John's, Nfld. The work done includes complete overhaul, and renewal where necessary. Practically the whole of the bottom plating, floors, etc., and a considerable portion of the side plating was replaced, and new deck winches, derricks and gear were supplied. The accommodation for passengers, officers and crew was all practically renewed. A complete new cast steel stern post and rudder were fitted, and the main engines, boilers, propellers, shafting and auxiliaries were thoroughly overhauled. The approximate cost of the repairs is \$300,000.

British American Shipbuilding Co.,

On the 14th of October, 1920, the Marine Department of the Dominion Government, at the request of the Canadian Government, was notified by the Canadian Government that the Canadian Government had ordered the construction of two steel cargo steamships, Canadian Pathfinder and Canadian Engineer, each approximately 3,500 d.w. tons. They were both in frame awaiting shell plates before further erection of the hulls could be proceeded with. As stated in Canadian Railway and Marine World for October, the interim liquidator, Osler Wade, intimated to the Marine Department his willingness to co-operate, so that the loss sustained by the Government might be reduced to the minimum, either by the liquidator continuing the work on a cost plus basis, or by permitting the Government to proceed itself. The liquidator advised us Oct. 13 that the court had made an order directing him to deliver the hulls, engines, etc., to the Dominion Government, and that bills of sale had been executed, but that he had not had any advice as to when the Government proposed to commence operations for the completion of the ships, and at the time of writing there has been no change in the situation. On Nov. 10 a Toronto daily paper stated that the Marine Department had requested Henry Hope & Sons, Canada, Ltd., manufacturers of steel casements, etc., Peterborough, Ont., to complete them, but we were officially informed a few days later that this was incorrect. On Nov. 16, the Mayor of Toronto telegraphed the Minister of Marine, urging the completion of the ships, and the Minister replied that the matter was actively engaging his department's attention and that he expected to complete arrangements shortly to carry on the work.

The Toronto Board of Control received a deputation representing the discuss the probable completion of two steel cargo steamships, under construction for Canadian Government Merchant Marine Ltd., and which, it was claimed, were only about 35% completed. The deputation stated that during 1918 the company sold six ships at a profit of \$2,289,000. It was also stated that during 1919 the Dominion Government paid \$185 a ton to the company for a ship, the cost being \$165 a ton, while shipbuilding costs in 1920 decreased to \$156 a ton, the Dominion Government price remaining as in 1919. These statements drew the remark from a member of the Board of Control, that it "looks like profiteering even on ships."

As far as the profiteering charge is concerned, the statement issued by Osler Wade, F.C.A., interim liquidator of the company, as published in Canadian Rail-

way and Marine World for October, states that the cost of the ship laid down in the yard was \$300, to which was added the cost of the ship, making a total cost of \$72,000. In 1918, labor cost \$49 and materials \$76 a ton; in 1919, labor cost \$49 and materials \$116 a ton; and in 1920, labor cost \$61 and materials \$95 a ton. Although the company may have sold six steamships in 1918, these ships were not all built in that year, and it is understood that they were built on shop account, with the prospect of selling them on completion. The statement that there was a profit of \$2,289,000 on the six ships, must be taken with reserve. The deputation is also reported to have stated that the Dominion Government in 1919 paid \$185 a ton for a ship, the cost being \$165 a ton. The only ships which the Dominion Government ordered from the company are the two at present there, uncompleted, and for which the contract price is \$180 a d.w. ton, and on these, the interim liquidator estimated that if they were completed, there would be a profit for the company of \$182,000, representing the difference between the amounts received for work done, and the charges for work done to July 31.

Halifax Shipyards Ltd., Halifax, N.S., expects to launch the steel cargo steamship Canadian Explorer; Marine Department contract 22; builder's yard no. 2; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, between Dec. 15 and 18.

The steel cargo steamship Canadian Marine; Marine Department contract 21; builder's yard no. 1; approximately 8,390 d.w. tons; built for Canadian Government Merchant Marine by Halifax Shipyards Ltd., underwent her trial trips Nov. 22.

Midland Shipbuilding Co., Midland, Ont., which laid the keel of the steel cargo steamship Canadian Logger; Marine Department contract 54; builder's yard no. 10; approximately 3,890 d.w. tons, for Canadian Government Merchant Marine on June 9, advises us that she will not be launched until next spring.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., launched the steel cargo steamship Canadian Sapper; Marine Department contract 59; builder's yard no. 8; approximately 2,800 d.w. tons; for Canadian Government Merchant Marine, Nov. 9, the christening being performed by Mrs. G. D. MacDougall, wife of the company's General Superintendent. The ship is expected to be completed about Dec. 12. She is the same in every particular as the Canadian Miner and Canadian Sealer, built previously by the company for Canadian Government Merchant Marine, except that she has twin decks on forward hold.

Port Arthur Shipbuilding Co., Port Arthur, Ont., launched the steel cargo steamship Canadian Harvester; Marine Department contract 61; builder's yard no. 45; approximately 3,890 d.w. tons; for Canadian Government Merchant Marine, Nov. 20; the christening being performed by Mrs. Keefer, wife of F. H. Keefer, M.P. for Port Arthur and Kenora.

Prince Rupert Drydock & Engineering Co.—See under "Prince Rupert Drydock & Engineering Co. Suspends Operations," on another page of this issue.

Tidewater Shipbuilders Ltd., Three Rivers, Que.—The steel cargo steamships Canadian Fisher and Canadian Forester; Marine Department contracts 15 and 16; builder's yard nos. 7 and 8; approximately 5,100 d.w. tons each, which were

launched Aug. 14 and Sept. 26 respectively, have been completed, with the exception of the interior fittings for the passenger accommodation, and the furnishings, which, we are advised, are to be put in at Halifax, N.S. The Canadian Fisher left Three Rivers Nov. 13 under her own steam, for Halifax, and we were advised on that date that it was expected to similarly dispatch the Canadian Forester about a fortnight later. It was considered advisable to have the interior fittings of the passenger accommodation installed at Halifax, rather than take chances of the ships freezing in, as there are so many delays in getting the necessary materials, both as regards the various manufacturers and transportation in general. The plans of both these ships were changed while they were being built, so as to provide accommodation for 28 passengers. On completion, they will be placed on the West Indian route.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., which launched the steel cargo steamship Canadian Highlander; Marine Department contract 55; builder's yard no. 103; approximately 8,390 d.w. tons; for Canadian Government Merchant Marine, on Oct. 14, expects to deliver her early in December.

Vancouver Drydock Contract Let.

A contract was signed Oct. 27, between the Dominion Government and J. Coughlan & Sons Ltd., for the construction of a second class drydock at Vancouver, B.C., under the terms of the Dry Docks Subsidies Act, by which the Government will pay a subsidy of 4½% for 35 years on the cost of the drydock, which, for the purpose of subsidy calculation, has been placed at \$2,500,000.

The plans and specifications, as originally drawn up, showed a clear width of the dock entrance of 100 ft., and have been amended to provide for a clear width of dock entrance of 110 ft., and all the figures in the original plans and specifications affected by this change have been increased by 10 ft. The caisson gate is to be redesigned to agree with the amended entrance width. Order in council 413, of Feb. 21, dealing with the matter was given in full in Canadian Railway and Marine World for March, page 156, the increased dimensions being provided for therein, the amended figures concerning only the original plans and specifications, which are annexed to the contract.

The dimensions of the drydock are to be as follows:—

Length from caisson stop to head wall	210 ft.
Length from back of sill to head wall	200 ft.
Clear width of entrance at bottom	110 ft.
Width of entrance at top	120 ft.
Depth over sill at extreme high water	20 ft.
Depth over sill at higher water (equivalent to high water ordinary spring tide)	25 ft.

Assistant Pilots for Winter Navigation.—The Montreal United Pilots Association has requested the Marine Department to order that from Nov. 20 to the close of St. Lawrence navigation, all ships navigating between Quebec and Montreal, shall carry an assistant pilot. The request states that at that time the weather is such as to bear very hardly on a pilot who is on duty for the whole distance between the ports named. It also states that, in former years, the season closed somewhat earlier, but it has been lengthened by the use of additional aids to navigation. It was announced Nov. 24 that the Marine Department had refused the request.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The figures given in a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for and which orders are to be carried out in accordance with the provisions of the Marine Act, 1914, and which are presented by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in this column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as may be ascertained after the ships have been completed. The figures in the column headed "Long tons d.w." and which are presented by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in this column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as may be ascertained after the ships have been completed. The figures in the column headed "Long tons d.w." and which are presented by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures in this column, not preceded by an asterisk, show the approximate total deadweights, subject to modification as may be ascertained after the ships have been completed.

Wreck of Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert.

The circumstances of this wreck show the accuracy of the Grand Trunk Pacific Coast Steamship Co.'s records. The ship, Prince Rupert, was built at the shipyard of Vancouver, B.C., and was the first of the line. It was launched on the 15th of September, 1915, and was the first of the line to be launched. The ship was launched at the shipyard of Vancouver, B.C., and was the first of the line to be launched. The ship was launched at the shipyard of Vancouver, B.C., and was the first of the line to be launched.

The ship was launched at the shipyard of Vancouver, B.C., and was the first of the line to be launched.

Great Lakes Levels.

The U.S. Lake Survey reports the monthly mean stages of the Great Lakes, for October, in feet above mean sea level, as follows: Superior, 602.05; Michigan and Huron, 580.55; St. Clair, 575.14; Erie, 572.05; Ontario, 245.29.

Lake Superior was 0.14 ft. lower than September, 0.27 ft. higher than a year ago, 0.60 ft. above average stage of October of the last 10 years, 0.88 ft. below the high stage of Oct. 1869, and 1.10 ft. above the low stage of Oct. 1879.

Lakes Michigan and Huron are 0.2

Wreck of Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, at Swanson Bay, B.C.

Photo taken by C. J. Hartman, M.D., Medical Officer of Health, Toronto, who was one of the passengers.

ship, the captain decided to return to Swanson Bay, and was able to beach the ship at the mouth of a creek at the entrance to the bay. As the tide continued to rise, after portions of the ship, including the boiler and engine spaces, became flooded, and she sank rapidly, with a list of about 60 deg. to starboard, her stern being in about 70 ft. of water.

Salvage operations were undertaken immediately by the Pacific Salvage Co., under the direction of Capt. W. H. Lord of the London Salvage Association. To aid in the work, a cofferdam has been

maneuvered the s.s. City of Victoria. At the time of writing (Nov. 23) the judgment had not been received, but a Vancouver press dispatch states that the inquiry was concluded Nov. 18, it being held that the primary cause of the casualty was that the helm was put to port instead of to starboard, and that the ship was considerably out of her course at the time. It is also stated that the certificate of the master, Capt. Duncan Mackenzie, was suspended for four months, and that of the first officer, Capt. R. Mackenzie, for three months.

ft. lower than September, 0.10 ft. lower than a year ago, 0.08 ft. above average stage of October of the last 10 years, 2.29 ft. below the high stage of Oct. 1876, and 0.95 ft. above the low stage of Oct. 1911. During the last 10 years the October level has averaged 0.2 ft. lower than the September level, and 0.02 ft. higher than the November level.

Lake Erie is 0.34 ft. lower than September, 0.42 ft. lower than a year ago, 0.10 ft. below average stage of October of the last 10 years, 1.65 ft. below the high stage of Oct. 1885, and 1.25 ft.

above the low stage of Oct. 1895. During the last 10 years the October level has averaged 0.3 ft. lower than the September level, and 0.3 ft. higher than the November level.

Lake Ontario is 0.18 ft. lower than September, 1.06 ft. lower than a year ago, 0.52 ft. below average stage of October of the last 10 years, 2.52 ft. below the high stage of Oct. 1861, and 1.62 ft. above the low stage of Oct. 1895. During the last 10 years the October level have averaged 0.4 ft. lower than the September level, and 0.2 ft. higher than the November level.

Canal Traffic Statistics.

Following is a summary of the canal statistics for September, compiled by the Dominion Bureau of Statistics' Transportation Division:—

Sault Ste. Marie Canal.—There was considerable increase in the traffic through the Canadian and U.S. locks, despite the strike of the seamen on the Canadian lines on Sept. 16. There was an increase over Sept. 1919 of 1,545,674 tons, but a decrease from Aug. 1920 of 677,031 tons, the big increases being in wheat, iron ore, and soft coal. Soft coal fell behind August by 492,840 tons, and this season is behind 1919 by 889,072 tons. Hard coal is also behind by 77,223 tons, and wheat by 15,563,017 bushels, while the iron ore is ahead of last year by 4,909,504 tons. The total traffic for the season is 55,194,179 tons, against 52,887,710 in 1919.

Welland Canal.—There was an increase in traffic over Sept. 1919 of 53,849 tons, but a decrease from Aug. 1920 of 34,396 tons, and the total for the season is 42,077 tons behind 1919, being 1,693,717 tons, against 1,735,794 last year. The big increases for the season are barley 88,442 tons, wheat 83,066 tons, oils 53,331 tons, while soft coal is 208,088 tons over last season.

St. Lawrence Canal.—Traffic for September was 19,936 tons over Sept. 1919, but 108,977 tons under Aug. 1920, and for the season 42,113 tons under 1919. There was a decrease of 1,273,630 bush. of wheat from Sept. 1919, and an increase of 86,178 tons of soft coal. The total cargoes were 422,486, against 411,550 for Sept. 1919. The totals for the season are 2,237,426, against 2,279,539 for 1919. The soft coal shipments are 199,203, against 237,956 in 1919.

The Trent, Rideau and St. Peters Canals show decreases, while the Ottawa, Chambly, Murray and St. Andrews Canals show increases. All these canals show increase for the season, with the exception of St. Peters.

The North American Steamship Co. Ltd., which was incorporated under the Dominion Companies Act, with \$750,000 authorized capital, and office at Toronto, was formed to acquire and operate the s.s. North American out of New York. This ship was built by Canadian Allis-Chalmers, Bridgeburg, Ont., and is screw driven by engine of 146½ h.p. Her dimensions are,—length 251 ft., breadth 43.6 ft., depth 20.5 ft., tonnage 2,280 gross, 1,315 net. She is of the same type of steel steamship as was adopted by the Imperial Munitions Board for 3,500 d.w. tons, and of which Canadian Allis-Chalmers built two for the British Government. The s.s. South American was built by the same builders for the South American Steamship Co., controlled by the American Metal Transport Co.

Royal Mail Steam Packet Co.'s Canada-West Indies Service.

As stated in Canadian Railway and Marine World for November, the Royal Mail Steam Packet Co. applied to the Trade and Commerce Department for authority to increase its rates between Canadian and West Indian ports by 25%, on account of the high prices of coal, wages, etc., and the Minister of Trade and Commerce has advised us that, after consulting the Halifax, N.S., and St. John, N.B., boards of trade, he has authorized the increase. The clause in the company's contract with the Dominion Government, under which the rates are controlled, is as follows:—

"The contractors shall, at least three weeks prior to the first sailing under this contract, furnish the Minister with a schedule of the freight rates proposed to be charged between the different ports on both north and south bound trips, which schedule shall at all times be subject to the approval of the Minister, and after being approved by him shall not be changed except with his consent; and the Minister may at any time, if he deem it advisable, fix the maximum rates to be charged on any article or class of goods; and the contractors shall carry between the ports hereinbefore named on all voyages of the said steamships employed under the terms of the contract, all passengers or freight that may be offered, or that can reasonably be procured, at rates which shall not be in excess of such maximum rates as fixed by the Minister, should he deem it advisable to so fix such maximum rates, and in no case shall any discrimination be made as regards rates, or otherwise, directly or indirectly against Canadian merchants or shippers, who shall always have precedence for their freight and goods over all other merchants and shippers; and it is agreed and understood that the freight rates on south bound trips, sailing from Halifax or St. John, as hereinbefore provided, on through bills of lading from any places in Ontario and Quebec, or from any Canadian points farther west, shall in no case be greater than from the same place via any United States routes or ports; and on north bound trips the rates from any port in the British West Indies to any place in Ontario or Quebec or other Canadian points farther west, shall be as favorable as via any United States route or port, to the same place; and it is further understood and agreed that the said

steamers shall not carry between the ports hereinbefore stipulated, on any voyage run under the terms of this contract, either deals or lumber or timber to a greater extent than 50% of the total quantity of the cargo carried on such voyage, and such quantity only in case other Canadian products are not offering or cannot be obtained. Provided, however, that in the event of other cargo not being obtainable, satisfactory evidence of that fact being furnished to the Minister, then the contractors shall be allowed to make up the balance of the cargo with deals, boards or timber."

The four steamships which the R.M. S.P. Co. has in the Canada-West Indies service are as follows, the figures showing gross tonnage:—Caraqet, 4,889; Chaleur, 4,746; Chignecto, 4,744; Chaudiere, 4,019. They sail fortnightly from St. John and Halifax to Bermuda, St. Kitts, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad and Demerara.

Magdalen Islands Shipping. — The Magdalen Islands are situated in the center of the Gulf of St. Lawrence, about 50 miles from East Point, Prince Edward Island, and the same distance from Cape Breton. The Trade and Commerce Department's Weekly Bulletin states that the small fleet of 10 schooners, with an average tonnage of about 65 tons each, which belong to the islands, have all they can do to carry from the islands the bulk herring and cod fish, and bring back the fuel and building materials needed; in fact, during the last few years, owing to irregular service by the mail steamship, these schooners have been obliged to carry a part of the goods which the steamship might have brought, and in consequence there has been a scarcity of fuel during the winter, especially in 1919-20, as, although the people of the islands chartered what outside schooners they could get, very few are willing to make trips to the island owing to the shoal water and the absence of harbors around the islands.

Ormes Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital, and office at Montreal, to carry on business as ship owners, shippers, steamship agents, etc., and to own and operate ships of every description for passenger and freight service, salvage and towing, etc., and to undertake the laying of submarine telegraphs in any part of the world.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1920:

Owners' Rights in Partially Built Ships, Under Builders' Liquidation Proceedings.

the ship was entered into Mar. 12, 1919, with National Shipbuilding Corporation, Wilmington, Del., and the carrying out of the contract was entrusted to Three Rivers Shipyards, Ltd., which the judgment described as being "treated, regarded, known and publicly designated as an operating division, or branch of National Shipbuilding Corporation." After the payment of two installments of the contract price to the builders, a mortgage was executed by the builders, Oct. 30, 1919, under the provision of the Canada Shipping Act, in favor of the owners, as security for the ship's completion. Building operations proceeded until the winding up order was made July 23, 1920, when four installments of the contract price had been paid, and nothing further was due until the ship had been launched, and as the liquidator declined to complete and deliver the ship, these proceedings were commenced.

The liquidator contested the claim on the ground that Three Rivers Shipyards, Ltd. was not a party to the contract, that it never received any installments of the contract price, the four installments paid going to National Shipbuilding Corporation, that it did a large amount of work for which it had not been paid, that the mortgage mentioned was invalid for want of necessary formalities, in not having been approved or authorized by the Minister of Marine, and was of no effect as far as it purported to mortgage any materials intended for the ship, and he claimed that to hand the ship over to the owners would prejudice creditors' claims in liquidation. Molson's Bank also opposed the claim, on the ground that the materials intended for the ship, and not already incorporated in the hull, had been assigned to the bank as security for advances.

The judgment declared that there were two main questions to be determined, (1) did the mortgage executed by Three Rivers Shipyards, Ltd., in favor of the owners, entitle the latter to the possession of the ship as it stood, or to the ship and all materials intended therefor, and which had been ordered or were on hand in the shipyard; and (2) had Molson's Bank a valid secured claim on the materials on hand in the shipyards which had been ordered for, or were suitable for, the completion of the ship.

The owners based their claim on the mortgage and not on the contract. The contract contained no provision for the

purchase of the property until the delivery and acceptance of the ship, and the mortgage was executed, not by National Shipbuilding Corporation, but by Three Rivers Shipyards, Ltd. It was abundantly clear that, for all practical purposes, the company at Three Rivers was an operating division or branch of the National Shipbuilding Corporation, which was apparently the mainspring of the industry carried on at Three Rivers, and it existed and was operated on the credit borrowings and contracts obtained by National Shipbuilding Corporation. The Three Rivers Shipyards, Ltd., however, had a separate corporate existence, and as a subsidiary company assumed the contract in question. The mortgage was in terms an assumption for a consideration of National Shipbuilding Corporation's obligations under the contract, and the execution of the mortgage was itself a fulfillment and one of the obligations entered into by the corporation in this contract. The mortgage, being on a ship in process of construction, was authorized under the Canada Shipping Act. The ship had not been registered in Canada as a British ship, in fact it was not a British ship, but was being built for foreign owners, and in the court's opinion the mortgage did not require the Minister of Marine's approval under George V, secs. 9 and 10, chap. 42. The court was also of opinion that the mortgage, being mainly to secure the completion of the ship, was not executed in violation of the Dominion Companies Act, and it therefore ruled that Three Rivers Shipyards, Ltd., had power and authority to execute it. While the Canada Shipping Act authorizes a mortgage on a ship about to be built, it does not authorize a mortgage on materials provided and intended for a ship. This contract was for a complete ship, not for a ship, and the materials intended for it, and the court's opinion was that the principles laid down by the House of Lords in *Seath vs. Moore* (11 Appeal Cases 350) and *Lej vs. MacBeth* (1904) A. C. 223, 73 L.J.P.C. 57, were applicable to the present case, hence its conclusion was that the mortgage was effective, only in so far as the ship had been actually built, and did not cover any of the materials or machinery intended for the ship, but not yet incorporated into it.

The Canada Shipping Act provides in sec. 45 that the mortgagee shall be deemed owner, for all purposes necessary for making the ship available as security for the mortgage, which in this case was not only the four installments paid, but also the completion and delivery of the ship. Unless put into possession, the owner would be unable to exercise the rights given to it by the mortgage, to have the ship completed and delivered in accordance with the contract. The corporation, by its contract, undertook to give such a mortgage on both the ship and the materials intended for it, but, for the reasons stated, the mortgage could not be held to apply to the materials. The owners having paid all installments due to date, the court ruled that the mortgage entitled them to take possession of the ship as it stands. However, they could not proceed to complete the ship without the materials, and as these were already assembled, it was ordered that the liquidator should transfer them as required, on payments that would be adjusted afterwards, the shipyard plant at the same time to be leased on a

rental of \$200 a week. In regard to the claim of Molson's Bank regarding steel plates, angles, and other materials at the ship, under the assignments to National Shipbuilding Corporation and Three Rivers Shipyards, Ltd. to the bank, under the Bank Act, sec. 88, the court held that when these assignments were taken by the bank, both National Shipbuilding Corporation and Three Rivers Shipyards, Ltd. were insolvent, and to the bank's knowledge. Its claim was therefore dismissed with costs.

Molson's Bank has entered an appeal against the judgment dismissing its claim.

An application by La Societe Naphthes Transports, to be allowed to proceed with the completion of the ship, was granted by the Court of Appeals, Nov. 16, on the company furnishing a bond to guarantee Molson's Bank payment for a quantity of steel plates, bars, etc., required for the ship, and on which the bank claims to have a privilege, which is the subject of appeal.

Furness, Withy & Co.'s Annual Report.

Following are extracts from Furness, Withy & Co., Ltd., report for the year ended April 30, 1920:—

The profits, including the balance brought forward, and after providing for taxation, were £1,125,404 1s. 8d. The usual half yearly dividend on preference shares, at the rate of 5% per annum, free of income tax, for the six months to October 31, 1919, were paid Nov. 1, 1919, leaving an available balance of £999,154 1s. 8d. Out of this balance the directors transferred £500,000 to depreciation account, and they recommended the payment of a bonus of 5% free of income tax, on ordinary shares for the past twelve months, representing a total distribution for the year of 10%, free of income tax. The appropriation of the available balance of £999,154 1s. 8d. will therefore be:—

Transferred to depreciation account	£500,000 0 0
6 months' dividend on preference shares at 5% per annum less income tax, May 1, 1920	26,250 0 0
6 months' dividend on ordinary shares, at 5% per annum, free of income tax, paid May 1, 1920	100,000 0 0
Balance of 5% free of income tax, on preference shares, payable Sept. 15, 1920	200,000 0 0
Balance carried forward to next year's account	172,904 1 8
	£999,154 1 8

Since the previous annual meeting, J. E. Furness, of Halifax, N.S., retired from the board to the regret of his colleagues, and the vacancy was filled by the appointment of Sir Osborn G. Holmden.

Canadian Lake Protective Association has discontinued the issue of bulletins reporting action taken upon each casualty report filed by masters of ships. Masters are now notified individually with respect to their particular cases, and it is believed that the change will lead to a more complete disclosure of the circumstances connected with each casualty, and each master will have confidence of careful consideration, and, if necessary, re-consideration of his case, before final action is taken.

Prince Rupert Drydock & Engineering Co. Suspends Operations.

Prince Rupert and Ottawa press dispatches stated early in November that the Prince Rupert Drydock & Engineering Co. had suspended operations, being in arrears for wages, and that some 800 men had been thrown out of employment. Writs were issued against the company, among others by Canada Metal Co. for \$2,714.15, and by Prince Rupert Coal Co. for \$5,250, and it was reported that the company owed a considerable amount to the Grand Trunk Pacific Ry. for freight, etc. It was also stated that the Marine Department had telegraphed that efforts were being made to secure the guarantee company's permission to settle the wages due and that the shipbuilding company had been asked to state their amount. It is said that the total liabilities will be between \$350,000 and \$400,000.

The shipbuilding plant and floating drydock operated by the company, which were fully described and illustrated in Canadian Railway and Marine World for Feb., 1912, were built by the Grand Trunk Pacific Development Co., a subsidiary of the Grand Trunk Pacific Ry. Co., of which the Minister of Railways is now Receiver, on behalf of the Dominion Government, and which is now under Canadian National Rys. management. They were leased to the John L. Mullen Construction Co., Pittsburg, Pa., in Aug., 1918, and the Prince Rupert Dry Dock & Engineering Co. was incorporated Dec. 23, 1918, with authorized capital of \$500,000, and office at Prince Rupert, to take over the lease and operate the property, by building steel and wooden ships. The provisional directors were: Newman Erb, W. M. Wadden and H. Blanchard, New York; John L. Mullen, Pittsburg, Pa., and A. M. Manson, Prince Rupert. In Jan., 1919, an order in council was passed authorizing the placing of contracts with the company for the building of two steel cargo steamships of approximately 8,100 d.w. tons each, for Canadian Government Merchant Marine Ltd., and Marine Department contracts 42 and 43 were signed Feb. 21, 1919, for building the ships, which were stated later to be approximately 8,390 d.w. tons each, at \$198 a d.w. ton. These were given builder's yard nos. 1 and 2, were designated Canadian Reaper and Canadian Thrasher respectively, and the keels were laid Sept. 27 and Oct. 20, 1919. In September 1920, the company's acting General Manager advised Canadian Railway and Marine World that the s.s. Canadian Reaper would probably be launched early in November and s.s. Canadian Thrasher about a month later, but they had not yet been launched.

On the organization of the company, the following officers were elected:—Chairman of the Board, Newman Erb, New York; President, John L. Mullen, Pittsburg, Pa.; Vice President, F. F. Schellenberg, Prince Rupert, B.C.; Treasurer, W. M. Wadden, New York; Secretary, H. Blanchard, New York; Superintendent of Plant, J. H. Pillsbury, Prince Rupert, B.C.; and the Vice President and the Superintendent of Plant were placed in active charge of shipbuilding. Towards the end of 1919 there were differences among the directors, and litigation followed to determine their rights, the Erb interests claiming damages from the Mullen interests, alleging fraudulent conspiracy to obtain control of the company. The result was that the Mullen interests were acquired by Newman Erb for \$75,000. In the early part of this

year, Newman Erb was reported to have stated that he and his associates had control of the company's stock, through the Empire Ship & Dry Dock Corporation, having bought the Mullen interests. He claimed that the company had spent \$550,000 in fixed assets, that it had no floating debt, but had on deposit in banks \$180,000, of which \$160,000 was a trust fund for emergency use to ensure the completion of work in hand. At that time he reported the steamships Canadian Reaper and Canadian Thrasher to be about 60% completed, and about 45% paid for. A balance sheet, dated Mar. 31, 1920, showed assets of \$2,835,596.77 and liabilities of \$2,092,957.38, and a balance at credit of profit and loss of \$742,639.39. The officers of the company are: Chairman and Managing Director, Newman Erb; Treasurer, W. M. Wadden; Secretary, H. Blanchard; acting General Manager, J. H. Pillsbury. At a meeting of local creditors early in November, it was stated that Mr. Erb was in New York with the intention of raising further capital, or obtaining some assistance from the Dominion Government, in both of which he was unsuccessful. It is estimated that the liabilities are between \$350,000 and \$400,000. Arrangements are reported to be in progress for the completion of the two ships now on the ways, it being estimated that it will require about \$1,200,000 to finish both, and that the amount due from the Government for the completed contracts will be about \$1,000,000. In the early part of this year, negotiations were reported to have been undertaken with several oil companies in New York and Holland for the building of about 20 oil tank steamships for approximately \$36,000,000, and we were advised that the settlement of the order was merely a question of adjustment as far as rate of exchange, etc., was concerned, between Canada and the U.S. The lack of construction facilities at Prince Rupert also tended to hold back the order, but the company announced that in the event of securing it, it would immediately commence building two additional ways on about 75 ft. centers, and also build at least 200 houses, with accommodation each, for a man, wife and two children, so that it might employ approximately 500 men in carrying out the shipbuilding programme. The orders for the oil tank steamships did not materialize at the time anticipated, and we were advised later that the placing of them depended on legislation being enacted, authorizing the Dominion Government to assist in shipbuilding by extending credit to buyers. The act which the Dominion Parliament passed authorizing a certain credit, details of which have already been given in Canadian Railway and Marine World, was not considered to be sufficiently attractive to the parties concerned, in view, it was stated, of the U.S. Shipping Board's policy of extending a ten year credit and otherwise more favorable terms to purchasers of cargo ships built by the Board. A suggestion was made that a 66 2/3% credit by the Dominion Government would be sufficiently attractive to give Canadian shipyards sufficient orders to keep them occupied for 18 months at least.

Newman Erb, who has been associated with the company from its inception, was born in Germany, and educated at St. Louis, Mo., where he was engaged in law practice from 1872 to 1892. In

1885 and 1886, he was General Attorney for Arkansas, Tennessee & Missouri, of the Fort Scott & Memphis Rd., and from 1886 to 1898, President, Western Telegraph Co., now owned by Western Union Telegraph Co. He is President, Ann Arbor Rd., and is also said to be President, British Columbia Copper Co., Vice President, New Dominion Copper Co., and an officer of Canadian Copper Co., and has an office at 42 Broadway, New York, N.Y. W. M. Wadden, Treasurer and a director, is Erb's Secretary, and I. M. Dittenhoefer, another director, is a New York attorney.

An Ottawa press dispatch of Nov. 19, stated that the London Guarantee & Accident Co., which gave a bond for 10% of the contract price, which is \$1,661,220, for each ship, had failed to reply to telegrams and letters from the Marine Department asking it to agree to the Department advancing sufficient funds to pay wages, and that without this consent no advance could be made. The dispatch also stated that the guarantee bond provided that in the event of failure by the contractors to complete the work the guarantee company had the option of doing so.

A Vancouver press dispatch of Nov. 15 states that Newman Erb has made an offer to creditors to pay all claims of \$100 and under, and one third of all remaining claims, at once, another third on receipt of the ninth instalment to be paid by the Government on account of the construction of the two ships for Canadian Government Merchant Marine Ltd., and the remaining one third on receipt of the tenth instalment.

Disposal of Steel Plates by Marine Department.

Ottawa press dispatch, Nov. 19.—Cable advices from G. H. Flood, Purchasing and Contract Agent, Marine Department, who is in England looking into the market for Canadian steel plates, indicated that Canada will be able to dispose of but few of the plates in Great Britain. The Dominion Government entered into a contract with the Dominion Iron & Steel Co. to take a portion of the product of the Sydney plant and dispose of it. Consequently, the Government is now trying to dispose of a portion of the 1921 output of the plant, but Mr. Flood states that German and Belgian competition in Great Britain is now an appreciable factor, and that Canada will meet with strong competition.

While the Dominion Government is trying to dispose of steel plates, it is stated at the Marine Department that a contract for 2,500 tons of plates for use on Hydro electric power construction at Niagara Falls will be filled in the United States. The situation, therefore, appears to be that, while the Dominion Government is seeking a market, plates for provincial work are being purchased in the U.S.

Sale of Canadian Naval Service Ships. We are officially advised that the two submarines which were purchased by the Government in the early stages of the war for service on the Pacific coast, and H.M.C.S. Niobe have been sold to the New Brunswick Rolling Mills, St. John, N.B. The understanding is that the Niobe is to be dismantled for scrap purposes. The ships Canada and Grilse have not yet been disposed of.

Mainly About Marine People.

Sgt. Montford Allan (Commonwealth) is the only Canadian member of the Canadian Forces in the Canadian Expeditionary Force.

G. M. Rossmore, Chairman, Canadian Pacific Transport Commission, Ltd., and Mr. Rossmore, who returned to Montreal, after a visit to Virginia, H. S. Smith.

Major P. J. A. Duff, son of Thomas A. Duff, General Counsel and Assistant to General Manager, Canadian Pacific Transportation Co., was the subject of a letter, "The Duff Family," in the Montreal Star, Nov. 1, 1920.

G. H. Flood, Purchasing and Contract Agent, Marine and Fisheries Department, left Ottawa, early in November, for England, on the ship *Albatross*, accompanied by Mrs. Flood. During his absence his duties are being attended to by J. J. Skelly, Assistant to Purchasing and Contract Agent.

R. S. Gourlay has been reappointed one of the Toronto Harbor Commissioners, by the Dominion Government, for three years from Oct. 22.

James H. Hall, formerly President, Western Transportation Co., Ottawa, who died at L'Orignal, Ont., Sept. 23, left an estate valued at \$73,271, his wife being appointed sole executor. The estate included 78 shares in Ottawa Transportation Co., valued at \$3,900, 109 shares in Forwarders Ltd., Kingston, Ont., mentioned as of no value, and shares in the Montreal Transportation Co., valued at \$7,933, due on agreement with Canada Steamship Lines Ltd.

H. E. A. Hawken, who has been appointed acting Deputy Minister of Marine and Fisheries, as stated in Canadian Railway and Marine World for November, was born at Ottawa, Sept. 28, 1879, was educated in public and high schools in Ottawa, and was for some time employed in the lumber business there by the W. C. Edwards Co. He entered the Dominion Government's service, as a junior clerk, Jan. 7, 1902, receiving his first permanent appointment Feb. 3, 1905, and working up through the different grades of the service until he was appointed Chief Registrar of Shipping, April 1, 1917. On April 1, 1920, he was appointed Assistant Deputy Minister of Marine, and on Nov. 1, 1920, acting Deputy Minister.

C. Gardner Johnson, of C. Gardner Johnson & Co., ship brokers and general agents, also Lloyd's agent for British Columbia, and C.P.R. Co.'s Marine Notary, Vancouver, has left, accompanied by Mrs. Johnson, for an extended trip. They will sail from New York for Tangier, and expect to visit Italy and France en route to England, where Mr. Johnson will visit Lloyd's and attend to other business. From London he will probably go to Stockholm, and sail back, via San Francisco, by one of the Johnson Line of Stockholm steamships, for which he is agent.

Alex. Johnston, who resigned his position of Deputy Minister of Marine and Fisheries recently, to enter the British Empire Steel Corporation's service, appeared before the Dominion Government's Tariff Commission at Halifax, Nov. 8, and asked that the Corporation's President, R. M. Wolvin, be allowed to submit the corporation's case to the Commission at Montreal.

Walter Lambert, M.I.N.A., naval architect, and marine surveyor, Montreal, has been commissioned by pulp and paper manufacturers on the Gulf of St. Lawrence, to

make an investigation of their facilities, to determine the best means of transportation for moving pulpwood from their lands to their mills.

Major A. C. Lewis, formerly Secretary, Toronto Harbor Commission, and now Secretary, Canadian Deep Waterways and Power Association, who was the Conservative candidate at the by-election for the representation of Northeast Toronto in the Ontario Legislature, on Nov. 8, was elected, polling 8,035 votes, against 4,351 for Major W. H. Kippen, Liberal, and 1,882 for Jas. Higgins, soldier-labor.

Thos. Long, President, Thos. Long & Co., general merchants, Collingwood, at one time a director of the Northern Navigation Co. of Ontario, and a former President of Collingwood Shipbuilding Co., who died at his house in Toronto, Nov. 7, left an estate valued at \$1,321,900.43, apart from insurance and personal trusts made by him in his lifetime, and which do not form part of the estate.

Capt. C. Lorway, who died at Sydney, N.S., Oct. 31, aged 56, was at different times in command of several ships sailing out of that port, but retired from seafaring life about 20 years ago, and had since held a position in the Supreme Court of Nova Scotia. John Lorway, in Canadian National Rys. service in British Columbia, is a brother.

Capt. E. P. McGannon, mate of the Prescott and Ogdensburg Ferry Co.'s s.s. Miss Vandenberg, died at Prescott, Ont., Oct. 28.

Lieut.-Col. Geo. P. Murphy, C.M.G., President, Ottawa Transportation Co., Ottawa, has been elected a member of the Dominion Marine Association's executive committee, in place of E. H. Beazley, General Manager, Union Steamship Co. of British Columbia, Ltd., Vancouver, who was killed in an aeroplane accident at Lulu Island, B.C., May 24.

James J. Nelligan, who was appointed Managing Director, Walford Shipping Co., Montreal, recently, was born at Hamilton, Ont., Jan. 20, 1876, and entered transportation service in 1892, since when he has been, to 1904, in various positions, G.T.R., at Hamilton, St. Catharines, Ingersoll, Ont., and Montreal; 1904 to 1907, Travelling Freight Agent, Northern Navigation Co. of Ontario, Montreal; 1907 to Mar. 1904, General Agent, Canadian Lake Line, Montreal; Mar. 1914 to the date of his present appointments, Division Freight Agent, Canada Steamship Lines, Montreal.

J. W. Norcross, President and Managing Director, Canada Steamship Lines, returned to Canada at the end of November, after a business trip to Great Britain. He is reported to have stated that he has obtained numerous contracts, which will have a far reaching effect, not only for his company, but for Canada.

Sir Frederick Orr-Lewis, President, Canadian Vickers Ltd., and Lady Orr-Lewis and family, left Montreal, Nov. 4, after spending some months in Canada, to sail from New York, for England.

Sir Ernest Manifold Raeburn, K.B.E., who retired recently from the position of representative of the British Ministry of Shipping in New York, has been appointed General Manager for Scotland for Canadian Pacific Ocean Services, Ltd., with office in Glasgow. He is a son of Sir William H. Raeburn, M.P., and is at

present a member of the Council of the Royal & Naval Association, Glasgow. He assisted the Government in various capacities during the war, and was created a K.B.E. for his services in America. He will assume his new duties Jan. 1.

Thomas Robb, Manager, Shipping Federation of Canada, sailed from New York on the s.s. *Mauretania*, for Great Britain, Oct. 28, on his way to Geneva, Switzerland, to represent Canadian shipping interests in connection with the League of Nations.

Henry B. Smith, President, Collingwood Shipbuilding Co., Davie Shipbuilding & Repairing Co., and Halifax Shipyards Ltd., who removed from Owen Sound to Toronto, a few months ago, was entertained at dinner by the Owen Sound Board of Trade and City Council, Nov. 7, and presented with an illuminated address.

A. R. Tibbits, Inspector of Harbor Commissions, is acting as Assistant Deputy Minister of Marine and Fisheries, at Ottawa, consequent on the appointment of H. E. A. Hawken, Assistant Deputy Minister, as acting Deputy Minister.

J. A. Warner, General Manager, Mersey Dock & Harbor Board, Liverpool, Eng., who is making a tour of Atlantic ports in Canada and the U.S., inspected the Quebec harbor and the Davie Shipbuilding & Repair Co.'s plant at Lauzon, Que., Nov. 10. He visited Montreal Nov. 11 and subsequently left for New York, whence he sailed for Liverpool.

Senator Lorne C. Webster, President, Webster Steamship Co., etc., and Mrs. Webster, have returned to Montreal, after a visit to Japan.

R. M. Wolvin, President, Dominion Steel Corporation, etc., and Mrs. Wolvin, will leave Montreal, in December, for Europe.

Navigation on Welland Canal. — The Superintending Engineer of the Welland Canal, L. D. Hara, has issued the following notices to mariners:—Attention is drawn to the fact that Joseph Battle, in connection with his contract for riprapping the banks of the Lake Erie level, is loading scows with stone, on the westerly side of the canal, in the rock cut between Ramey's Bend and Humberstone, and unloading them chiefly between Welland and Port Robinson. All vessels passing this plant must do so at low speed, and with great caution, otherwise the penalty provided in par. 19 of the Canal Rules and Regulations will be imposed. Ships should not attempt to pass each other adjacent to the plant in the rock cut. Considerable damage and inconvenience has already occurred to the plant on account of the excessive speed at which ships pass.

Shoaling in Lake St. Clair. — The U.S. Engineer Office has issued a notice to ship masters advising that recent survey develops shoaling in Lake St. Clair, in prolongation of the center dike, St. Clair Flats Canal. A gas buoy has been placed to mark the outer end of this shoal about 1,800 ft. from the lower end of the canal. Ships leaving or entering said canals will find greatest depth by proceeding on courses along the center lines of upbound and downbound channels, departing from or entering the main lake channel, below said gas buoy.

Atlantic and Pacific Ocean.

The Canadian-Australian Royal Mail Line's s.s. Makura, which is under overhaul at San Francisco, Cal., is also being converted into an oil burner. It is expected that she will return to service between Victoria, B.C., and Sydney, N.S.W., about Dec. 15.

An agreement is reported to have been concluded by the Dominion Government with Canadian Pacific Ocean Services Ltd. for the carriage of all Canadian mail to the Orient, from Vancouver and Victoria, at a fixed price per pound. It is stated that the terms are similar to those in force for the carriage of United States mails to the Orient.

In one week recently the Canadian Pacific Ocean Services made a record for the St. Lawrence with six big ocean liners, with approximately 5,000 passengers, en route to Canada simultaneously. It is stated that no other company has ever had this number of liners making the westbound trip to Canada at the one time.

The White Star Line's s.s. Olympic, which was reconditioned recently, after her war service, and equipped with oil burning apparatus, has made a record trip between New York and Cherbourg, France. She sailed from New York, Nov. 6, and arrived at Cherbourg, Nov. 12, completing the voyage in 5 days 13 hr. and 12 min. at an average speed of 22.53 knots an hour.

Elder Dempster & Co.'s s.s. Chama, which grounded on Bellechasse Island, during October, while outbound for West and South African ports, was released at the end of the month and taken to Quebec, where she discharged cargo, and subsequently was taken to Montreal, where she was drydocked for repairs by Canadian Vickers Ltd. The repairs were expected to be completed by the end of November.

The s.s. Koenig Friedrich August, which Canadian Pacific Ocean Services Ltd. has purchased from the British Government, is one of the German steamships which came into the hands of the allies on the conclusion of the war. She was operated formerly by the Hamburg-American Line, to New York. She was built by Blohm & Voss, Hamburg, Germany, in 1906, and is of 9,462 tons net. Her dimensions are,—length 475.7 ft., breadth 55.3 ft., depth 30.9 ft. We are officially advised that she will probably be renamed Montreal, but that it had not then been decided on what route she was to be run.

Maritime Provinces and Newfoundland.

The French s.s. Poinot, bound from Florida to France, put in at Halifax, N.S., Nov. 15, for minor repairs to machinery.

Eastern Steamship Lines withdrew its s.s. Governor Dingley from the St. John, N.B.-Boston service, Oct. 29, for the winter, and stated that it expected to resume service about April, 1921.

The British s.s. Anglesa, which had been in the Reid Newfoundland Co.'s dock undergoing repairs to her bilge pumps, etc., left St. John's, Nfld., Nov. 1, on her return voyage to Rotterdam.

The French s.s. Pro Patria, which ran aground at the entrance to False Bay, Sydney, N.S., Nov. 16, was released on the following day by the tug Roebing.

She sustained no damage and proceeded on her voyage to St. Pierre, Miquelon.

The s.s. Lady Evelyn, owned by the Gulf of St. Lawrence Shipping & Trading Co., Quebec, and operating between Nova Scotia and Magdalen Island ports, was attached at Pictou, N.S., Nov. 5, on a claim for \$12,000, for repairs made to the ship last winter, by Pictou Foundry Co.

Samuel Harris Ltd. and others, owners of the s.s. General Currie, her cargo and freight, have entered action in the Newfoundland Admiralty Court at St. John's, Nfld., against the s.s. Fortia, for \$15,000 damage sustained in a collision in Mortier Bay, Nfld., June 29. The s.s. General Currie was built during this year by the Dominion Shipbuilding Co., Toronto.

The St. John Dry Dock & Shipbuilding Co., which has the contract for the Courtenay Bay improvement works and a dry dock at St. John N.B., has bought the tug Katherine K. from the Dominion Public Works Department. She was built at Montreal in 1915, and is screw driven, by engine of 6 h.p. Her dimensions are, length 58.4 ft., breadth 18.4 ft., depth 5.9 ft.; tonnage, 58 gross, 23 registered.

The Hudson's Bay Co.'s s.s. Nascopee arrived at St. John's, Nfld., towards the end of October, about a month overdue, after her usual trip to Fort Churchill, and various trading stations in Hudson Bay and Labrador. After taking on supplies at St. John's she proceeded to London, Eng., with a large cargo of furs. It is stated that she was delayed on her voyage, through making calls at certain ports which should have been made by the company's s.s. Pelican, but which she was prevented from making owing to being damaged by ice in Hudson Strait.

A. R. Dufresne, Manager and Chief Engineer, St. John Drydock & Shipbuilding Co., is reported to have stated at St. John, N.B., Nov. 1, that the excavation in connection with the drydock will be completed during January and it is anticipated to have the drydock ready within the contract time, also that he anticipated that the breakwater in Courtenay Bay would be completed during January and that good progress was being made with the dredging. The soil taken out by dredging is being used to reclaim about 25 acres of land on which will be built shops for the drydock.

Province of Quebec Marine.

The Keystone Transportation Co.'s s.s. Keywest grounded on the Chateauguay shoals in Lachine Lake, Oct. 31.

The Sincennes-McNaughton Line's barge Augustus, which sank in the St. Lawrence canal, Nov. 11, was raised Nov. 13. There was little delay to navigation, only the larger ships being affected, as the channel was not completely blocked.

The Imperial Oil Co.'s s.s. Chinampa, which ran aground, about 300 ft. from the company's wharf at Montreal, towards the end of October, was released by six of the Sincennes-McNaughton Line's tugs, Oct. 28, without apparent damage, owing to having stuck in the soft bottom.

R. A. Wiallard, agent, Marine Department, Montreal, announced Nov. 11, that the removal of gas buoys from the St. Lawrence River would be commenced between Nov. 20 and 25, as weather permitted, and the gas buoys removed would be replaced by steel buoys until the ac-

tual close of navigation.

A report concerning shipping at the port of Montreal, to the end of October, shows 582 ship arrivals this year, having a tonnage of 1,767,879, against 641 arrivals with a tonnage of 1,825,128, for the same period of 1919. The decrease is said to be chiefly in the export of grain, the passenger trade having been heavier than in 1919.

The Kirkwood Steamship Co., Montreal, which, through T. M. Kirkwood, Montreal, bought the yacht Speedy II, from the Government, and which has also bought a number of steam trawlers built in Canada during the war for the British Government, is reported as likely to inaugurate a river steamboat service on the reopening of navigation in the spring.

The schooner Mina Nadeau, which was launched at Port Daniel, Que., Oct. 1, and which, owing to the failure of the tide to rise to the anticipated height, stuck in the sand, has been floated successfully, and towed to the breakwater. She has been chartered to load at Port Daniel for Cuba. She is of 327 tons, and is owned by Nadeau & Tyer, of Port Daniel and Halifax.

The s.s. Zephyr P., owned by Caughnawaga Transport Co., Lachine, Que., has been re-registered as Sault St. Louis, owing to material alterations, having been lengthened 5 ft. She was built at Sorel, Que., in 1910, and rebuilt there in 1920, and is screw driven by engine of 16½ h.p. Her dimensions are,—length 98.3 ft., breadth 22.3 ft., depth 7 ft., tonnage 202 gross, 124 net.

Ontario and the Great Lakes.

The Montreal Transportation Co.'s s.s. Atikokan, engaged in the coal trade, arrived at Halifax, N.S., from St. John, N.B., Nov. 14, for repairs to one of her boilers.

The s.s. Samuel Marshall, owned in Montreal, was tied up at lock 2 on the Welland Canal, Nov. 8, on a writ of the Admiralty Court's Ontario Division on a claim against the owners.

Low water in the Detroit River in the early part of November contributed considerably to delays in navigation. The chief sufferers were ore carriers taking ore to U.S. ports.

Canadian Steamship Line's s.s. Stormont, while en route from Port Arthur to Montreal, with a cargo of wheat, ran aground in the Rapide du Plat, near the upper entrance of Morrisburg Canal, Nov. 4.

The s.s. John B. Ketchum 2nd, owned by the George Hall Coal Co. of Canada, Montreal, which grounded on a shoal near Morrisburg, Ont., during a heavy fog, towards the end of October, was released after a few days.

Two steamships, Juvigny and Chipewa, each 2,305 gross tons, built by the Detroit Shipbuilding Co. at Wyandotte, Mich., left the yards for the coast, via the Welland Canal and the St. Lawrence River, during November. They are owned by Independent Steamship Co., Wyandotte, Mich.

It is announced that the assets of the Rideau Steamboat Co. Ltd., Ottawa, are to be sold. The company owns the s.s. Wanakewan, which was built at Kingston in 1910. She is screw driven by engine of 8 h.p., and her dimensions are, length 70.2 ft., breadth 15.4 ft., depth 5.2 ft.; tonnage, 68 gross, 44 net.

The s.s. Maplegrove, formerly Chero-

The tugboat, *William*, built at the same time as the *Wellington*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

The tugboat, *John*, built at the same time as the *William*, was also damaged by fire at St. Catharines, Nov. 7. She was built at Port Maitland, Ont., in 1895, and was screw driven by engine of 12 h.p. Her dimensions are,—length 56 ft., breadth 12 ft., depth 5.8 ft., tonnage 26 gross, 18 net.

Ships Registered in Canada During August, 1920.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons register.

ter, and to mortgage it in plaintiff's favor, but had failed to do so. This claim was also dismissed, as the judgment declared that neither the Admiralty Court Act of 1840, nor that of 1861, gave it the right to adjudicate on a claim arising out of a breach of contract. The court pointed out that the motion to dismiss could have been made at an earlier stage, and would thus have saved useless proceedings and expense to the parties concerned.

Manitoba, Saskatchewan and Alberta.

The freight carried on the Red River during this year was considerably in excess of that carried in any year since the outbreak of war, and included wood and slabs, 1,000 cords; lumber 2,000,000 ft. b.m., and ice, 45,000 tons. A large quantity of cordwood is reported to have been held up on Lake Winnipeg owing to lack of central storage facilities in Winnipeg and St. Boniface. It is anticipated that facilities at the Winnipeg end will be greatly increased in the near future and that large quantities of lumber and building material will be taken in by the river route next year.

British Columbia and Pacific Coast.

The Canadian Fish & Cold Storage Co.'s s.s. James Carruthers, which was expected to be a total loss, after her collision with the s.s. Surveyor, as mentioned in our last issue, is to be salvaged.

The Coast Steamship Co.'s s.s. Clansman, sank at her dock at Vancouver, Nov. 8. She was raised by the Vancouver Dredging & Salvage Co., the chief damage sustained being to her cargo of salt.

The C.P.R. British Columbia Coast Service s.s. Princess Royal had her starboard rail damaged, in a collision with the barge Louisiana, in tow of the s.s. Marmion, in the Granville channel, Nov. 10, during a dense fog.

The C.P.R. s.s. Princess Beatrice was hauled out at Yarrow's Ltd. yards, Victoria, Nov. 10, for general cleaning and painting, and afterwards replaced the s.s. Princess Royal on the Prince Rupert run, the latter returning to Victoria for cleaning and painting.

The British Columbia Express Co.'s s.s. B.X., which was wrecked near Fort George Canyon, on the Upper Fraser River, Aug. 34, 1919, has been salvaged and taken to South Fort George by the same company's s.s. B.C. Express. On

account of her condition, the salvaged ship was lashed to the other's side.

The wooden steamships which were built at Victoria, by the Foundation Co., during the war, for the French Government, are, according to reports, being dismantled in France, and converted into motor ships. It is stated that the boilers and engines have been removed, also the masts, and that they are being equipped with twin Diesel engines and two baldheaded masts.

The Vancouver Island Whaling Co., which has been organized at Victoria, recently, is reported to have acquired four steamships in Great Britain from the Admiralty for whaling purposes. S. C. Ruck, General Manager, and W. M. Kelly, engineer, with Capt. B. Johnson, have been in Great Britain for some time in connection with the acquiring and preparing of the ships.

The Vancouver Harbor Commissioners have prepared a statement of the shipping handled in the harbor for the year ended Aug. 31, 1920, showing a total of 430 deep sea ships, with a tonnage of 2,545,000, dealing with cargo, 725,000 cubic tons inward, and 425,000 cubic tons outward; 8,220 coastwise ships with tonnage of 7,810,000, and cargo 735,000 cubic tons inward, and 298,000 cubic tons outward.

The Terminal Steam Navigation Co.'s s.s. Ballena was badly damaged by fire at Union Steamship Co.'s wharf, Vancouver, Nov. 13, one of the fireman losing his life, being cut off from escape by the flames. The fire is believed to have been caused by the ignition of oil fuel. The s.s. Ballena was formerly named Joan, and was owned by the C.P.R. and operated in its B.C. Coast Service. She was built at Victoria, B.C., in 1892, and is screw driven by engine of 85 h.p. Her dimensions are,—length 176.8 ft., breadth 30 ft., depth 11 ft.; tonnage, 869 gross, 577 register.

A Vancouver press report states that the wreck of the freight steamship San Pedro, which went ashore on Brocton Ledge, off the entrance to Victoria harbor, about 30 years ago, has been sold to Capt. Gardner of Victoria, B.C. The San Pedro sailed from Comox, B.C., for San Francisco, Cal., with a cargo of 4,500 tons of coal and struck on Brocton Ledge, Nov. 22, 1891. At that time the cargo was valued at \$2.50 a ton, but is now stated, if it still exists, to be worth \$11 a ton landed on the wharf and it is stated that the purchaser hopes to salvage it. The ship is lying in 8½ fathoms of water, and it is not believed possible that the hull can be raised.

Advice to Lake Sailors.

The U.S. Lake Carriers Association has issued a statement reviewing the past season's work by the Great Lakes fleets which says in part:—"In so far as the near future is concerned signs do not indicate any material falling off in the movement of commerce on the Great Lakes. Therefore, it looks as if all of those men now aboard the bulk freighters will have jobs at the beginning of 1921, and by sticking to the boats will have employment during the entire season. But there are conditions already well developed against which the lake sailor cannot afford to close his eyes or refuse to accept when making plans for the future.

"Along many lines the state of after war readjustment is completed, and with the general tightening up which is prevalent during winters in normal periods the extent will be more widespread. A general reduction of prices has occurred, and this means increased efficiency of production. History has ever shown that rate of production is low when there is one man for two jobs, and that it is high when there are two men for one job. When sailors leave their boats for the winter they will not find, as a whole, the shore jobs with the consummate ease that prevailed for three or four winters back. In all parts of the country there is an abundance of shop help looking for work. With the readjustment, the purchasing power of the dollar will increase, but money should at the same time become scarcer, so be thrifty and save your dollars now.

"While next year's prospects are good, the indications are, there will be many more men available, so that men with a job will have something worth while. This condition is being brought about by the situation on the sea. The shipping trade in British, French, Scandinavia, Japanese and American waters all has slumped, with no immediate sign of recuperation. While coastwise shipping on seaboard was in bloom many lake sailors went down, for the novelty as well as experience. The U.S. Shipping Board is laying up boats, so they will have to come back."

The lake sailors have exhibited thrift in banking their earnings, it is observed in reports of leading banks in Great Lakes ports. The deposits with the U.S. Postal Savings Banks, maintained on the mail boat C. F. Bielman, Jun., operating on the Detroit River, were higher than in previous seasons.

Grain Handling Charges Against Ships. The Dominion Marine Association has recommended that it is desirable that ships carrying grain should discontinue payment of any charges for shovelling, elevating, trimming or handling grain in any way, in fact that it should be loaded and unloaded free. The U.S. Lake Carriers Association has informed the grain trade that its member companies' ships will not pay shovelling charges after the reopening of navigation in 1921, and a special committee has been appointed to work in conjunction with the Dominion Marine Association with regard to the larger proposal.

John Allsop, General Agent for Canada Royal Mail Steam Packet Company, Halifax, N.S., writes: "As a regular subscriber to Canadian Railway and Marine World, I always peruse its contents with much interest."

Wreck Commissioners' Enquiries and Judgments.

Montreal Henry B. Hall Collision.

Held at Montreal, Oct. 28, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. B. Henry and C. A. Lapiere, as nautical assessors, into the collision between the Canada Steamship Lines' s.s. Montreal and the Wilson Patterson Clifford Co.'s s.s. Henry B. Hall, near Sorel in the St. Lawrence River, Sept. 20. The evidence showed that the Montreal left her wharf at Sorel downbound, and when leaving she backed as far as the long wharf, and then began to turn to head down the river. In doing so she showed the Henry B. Hall, a down coming vessel, first her green light and then her red light. The Henry B. Hall's green light was also seen. When the Montreal had partly turned, a one blast signal was given which was unanswered by the Henry B. Hall. The Montreal heard the Henry B. Hall's signal of three blasts, but that signal was intended for the Henry B. Hall's engine room and not for the Montreal. While turning, the after port part of the Montreal came in contact with the Henry B. Hall, with slight damage to both ships. The weather was clear, and the wind was not strong enough to influence either ship. The pilot on the Henry B. Hall stated that he did not know where the Montreal was going, and that the one blast signal given by the Montreal may have been for the information of another ship also going down astern and to the south of the Henry B. Hall. The court expressed the opinion that under the circumstances existing, the Henry B. Hall was justified in not maintaining her course, and the fact that the Montreal could not be turned quickly did not afford any excuse for the collision. The crossing rule does not apply in this instance, as the one blast signal had been given some time before the collision, when the Montreal was south of the Henry B. Hall. The Henry B. Hall's procedure when the collision was imminent, to check and starboard, was proper. Had she gone astern, she would have neutralized the effect of her helm, as the speed at which she was going would not have been given in time, and the result of a full speed astern, or a port helm, would have been disastrous to both ships. Therefore the court found that Capt. F. X. Lafrance, master of the s.s. Montreal, was in default for contravention of article 32, and he was severely reprimanded. The pilot, O. Perron, of the s.s. Henry B. Hall, was exonerated from blame.

Stranding of s.s. Chama.

Held at Montreal, Nov. 3, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. J. B. Henry and C. J. Stuart, as nautical assessors, into the stranding of Elder Dempster & Co.'s s.s. Chama, near Bellechasse Reefs, in the St. Lawrence River, Oct. 21, while outward bound from Montreal to African ports. The court exonerated the master, Capt. A. D. Burroughs, from all blame, and although he was absent from the deck at the time, such absence was excusable and permissible. The second officer, W. T. Lane, failed to realize the importance of his duties, in not assuring himself of the lights that were passed, and were in sight, and when he called the pilot's attention to the fact that the ship was dangerously near the Bellechasse light, he should have called the

attention of the pilot to the fact that the light could have been remedied. He was therefore severely reprimanded for not realizing his responsibility. The pilot, A. B. Hall, in the same address, was acquitted that he did not take the Crane Island light for the Bellechasse light, and that his order was a mistaken one, ought to have discovered the error sooner than he did, as the ship described the angle between her and the light to the extent of four points or 45°, and a complete minute elapsed. It was only after the lookout man had called a warning that a rectification was attempted. For this unaccountable mistake the pilot's license was suspended for 6 months to May 3, 1921, and he was, in addition, ordered to pay the costs of the enquiry.

United States Shipping and Shipbuilding Notes.

The U.S. Shipping Board's new personnel is as follows:—Admiral W. S. Benson, reappointed as Chairman for six years; F. I. Thompson, of Alabama; J. N. Teal, of Oregon; J. A. Donald, of New York; C. H. Rowell, of California; G. D. Goff, of Wisconsin; and Charles Sutter, of Missouri.

The U.S. Bureau of Navigation has issued a summary of reports from shipyards showing number and gross tonnage of steel ships under construction or contract for private owners Oct. 1. On that date private U.S. shipyards were building, or under contract to build for private shipowners, 331 steel ships of 1,236,227 gross tons, compared with 345 ships of 1,236,547 gross tons on Sept. 1. These figures do not include government shipbuilding, or ships contracted for by U.S. Shipping Board.

Admiral Benson, Chairman, U.S. Shipping Board, has made a statement regarding the new agency agreement which has been adopted by the Board for management of its ships. The agreement for operation of the Board's fleet is the result of seven months study by its standing committee on agent's agreement, composed of representatives of the Board and of all steamship associations of the country. Under this agreement the agent will get nothing at all if he lets a ship lie idle. His commissions are based on freight collected; he must, in order to make anything, not only secure cargo for the ship, but secure it at best possible freight rates, and dispatch his ship quickly.

Admiral Benson, Chairman, U.S. Shipping Board, is reported to have said in addressing the American Petroleum Institute at Washington recently:—"Comparatively little is known of our enormous requirements of fuel oil and I believe that a brief resume of the efforts of the Shipping Board to purchase its fuel oil requirements and of problems which have confronted us in this respect during recent years, is essential to full appreciation of the extent to which the interests of the Shipping Board and of the American petroleum industry are interwoven. For 1919 our requirements of fuel oil were approximately 18,000,000 barrels; for 1920, 30,000,000 barrels; and for 1921, we estimate our requirements will amount to approximately 40,000,000 barrels."

Canadian Notices to Mariners.

The Marine Department has issued the following:

British Columbia, Vancouver Island.—The channel south of Limestone Island, Quatsino Sound, has been examined by a Hydrographic Survey officer, and it appears to be clear of danger for a ship passing north of the Foul Islets and Single Island. The track recommended is from one cable north of the large western island of the Foul Islets to two cables north of Single Island, and thence in midchannel, passing two cables north of Pender Point and 900 ft. off shore. The set of the current across the western end of the channel is to the southward toward Foul Islets, and in the vicinity of the latter the depths are very irregular and some caution should be exercised. A rock lying 950 ft. from the south point of the largest western Foul Islet has been found, with 11 ft. of water on it at low water. The drying bank off the south shore extends to within 900 ft. of this rock and the channel is therefore practically useless for navigation.

The Public Works Department has completed the dredging of a basin 465 ft. long and 200 ft. wide with a least depth of 35 ft. alongside the main wharf at the William Head quarantine station.

Strait of Georgia.—The Government wharf at Powell River has been completed. It adjoins the north side of the breakwater at its outer end, and is 340 ft. long by 60 ft. wide. On the north face of the wharf the Public Works Department has dredged a basin 70 ft. wide, the full length of the wharf, with a least depth of 19 ft. alongside the wharf.

Cousins Inlet.—The depth of water over the uncharted rock, situated 4.6 cables 128 deg. from the light at Wearing Point, Wallace Bay, is 3 ft.

The Public Works Department has removed the rocky patch 150 ft. from the middle of the Western Fuel Co.'s loading wharf, Nanaimo harbor, to a least depth of 29 ft.

Malaspina Strait, Texada Island.—An occulting white acetylene gas light, shown from a lens lantern on a concrete base, surmounted by a staff carrying a wooden slatwork drum, has been established on the top of the existing day beacon on Cyril rock, off Grise Point. The light is unwatched.

Broughton Strait.—An occulting white acetylene gas light, shown from a lens lantern, has been established on Lewis Point, on the west side of the entrance to Beaver Cove. The light is unwatched.

New Brunswick, Northumberland Strait.—The back range light on the Kouchibouguac Bar has been discontinued temporarily, owing to the shifting of the channel. The front range light is on the east side of the south beach, in Kouchibouguac Bay.

Nova Scotia, North Coast.—Range lights have been established on the Picou River as follows:—Albion Range, front light, on west shore of East River, near abandoned coal loading piers, occulting white acetylene gas, shown from a lens lantern, at an elevation of 13 ft.; back light, on shore of bay, 1,550 ft. from front light, similar light at an elevation of 23 ft. Trenton Range, front light near outer end of east pier at entrance to Stonehouse Point, occulting white acetylene light, shown from a lens lantern at an elevation of 14 ft.; back light on point 1,300 ft. from front light, similar light at an elevation of 30 ft.

The lights are unwatched. Ships going up the river will keep the Albion range lights in one, 144 deg. 30 min., until the Trenton range lights come in one, 119 deg. 30 min. This alignment leads to the piers at the entrance to Stonehouse Point lock.

Ontario, Lake Ontario.—The governing depths in the entrances to Toronto harbor are,—western entrance channel 14 ft. and eastern entrance channel 16 ft. below zero of the harbor master's gauge, which is 245 ft. above mean sea level at New York. While improvements are in progress in the harbor, mariners can secure additional information regarding depths in the different parts of the harbor, from the harbor master.

St. Clair River.—Two lights have been established on Walpole Island, lower St. Clair River. Both lights are occulting red acetylene gas, and are shown from a lens lantern at an elevation of 18 ft., from a pole, with a shed at base, on platform supported on piles. The lower light is in 5 ft. of water on east side of channel, midway between Russell Island light 12, and Russell Island shoal gas buoy, and the upper light is on east side of channel nearly opposite Russell Island shoal gas buoy, and about 1,800 ft. north of the lower light.

Of the world's shipping, 16.3% are reported to be oil burners, 76% coal burners, 1.7% internal combustion engines, and 6% sailing.

Hard times are predicted in ship-building yards in the north of England, according to a London press dispatch, which says that shipowners are refusing orders to build owing to fluctuating prices and conditions due to high wages.

Toronto Harbor Bridge.—The Dominion Marine Association has recommended that the opening in the bridge proposed to be built over the western gap, at Toronto Harbor, should be 250 ft. clear space.

Overhead Wires Across Welland Canal. The Dominion Marine Association has recommended to the Dominion Government that wires across the Welland Canal should not be placed at a less height than that adopted as a minimum in the construction of the Quebec bridge, and in the erection of overhead wires at Three Rivers, Que.

Ships on Canadian Register.—An Ottawa dispatch states that the number of steamships on the Canadian register has decreased from 4,457 last year, to 4,435, but that the gross tonnage has increased from 930,367 last year to 1,060,477; also that sailing ships decreased from 4,220 to 3,887, the tonnage increasing from 512,992 to 513,492.

Dues on Quebec Ships at U.S. Ports.—Negotiations are proceeding with the U. S. Government to relieve ships from Quebec Province from payment of tonnage dues now imposed on them in U.S. ports, and to offset this, the Dominion Marine Association has taken action to secure an amendment to the Dominion law next session, recommending an amendment to the Canada Shipping Act to relieve U.S. ships entering Quebec ports from payment of hospital dues. Ships from Ontario ports do not pay tonnage dues on entering the U.S. ports, as no tax is imposed on U.S. ships in Ontario ports.

Hudson Straits Customs Station.—An Ottawa press dispatch says that a Can-

adian customs station is to be established at Port Burwell, in Hudson Straits. Heretofore there has been practically no check on ships going into Hudson Bay and northern coast territories to trade, but now all ships will be required to pass customs at Port Burwell. The customs officials will be materially assisted by the Royal Canadian Mounted Police patrol.

Oil Burning Ships to be Reconverted to Coal Burners.—We are advised that owing to the seriousness of the fuel oil situation on the Pacific Coast, the C.P.R. has decided to reconvert its coast steamships, so that coal may be used as fuel, and that this work will be undertaken early next year. At present, the company has three of its coast steamships using coal as fuel, viz., Princess Beatrice, Princess Royal and Otter, together with three tug boats.

Overloading Ships for Lachine Canal Transport.—The Superintendent of the Lachine Canal is reported to have announced that, owing to the phenomenally low river levels, particularly in Lake St. Louis, it is dangerous for ships to be loaded beyond a depth of 13 ft. 10 in. It is difficult to maintain the canal lock levels, and ships are running into danger through loading beyond that depth, apart from the damage being done to the lock sills. At normal times, the canal depth is 14 ft. 4 in.

The Canadian Robert Dollar Steamship Co.'s annual meeting was held at Vancouver, B.C., Nov. 11. It was stated that the facilities at Vancouver are good, and that the company has decided to maintain its headquarters there. During the year, the company established a service between New York and Vancouver, with calls at Cuban ports, and refrigerating systems were installed on the ships running to Oriental ports. The officers for this year are:—Melville Dollar, President; J. Harold Dollar, Vice President; K. J. Burns, Secretary; other directors, Robert Dollar and Stanley Dollar.

Walford Shipping Co. Ltd., the incorporation of which, with office at Montreal, was announced recently, is acting as general shipping agents, and local agents for Walford Shipping Co., New York, and Walford Ltd., shipping agents and ship owners, London, Eng. The officers are:—President, Jas. Donald, New York; Vice President, A. S. Roberts, New York; Managing Director, J. J. Nelligan, formerly Division Freight Agent, Canada Steamship Lines Ltd., Montreal. C. A. Barnard, K.C., Montreal, is a director.

Freeboard Regulations on Great Lakes. The U.S. Government is considering the question of the establishment of load-line or freeboard regulations for ships on the Great Lakes, and the Dominion Marine Association has been active in making enquiries as to progress. The U.S. Department of Commerce appointed a committee to study the subject, and this was subdivided. A special committee known as the Lake Committee, consisting of Prof. H. C. Sadler, of Michigan University, and H. N. Harriman, of the Great Lakes Register, Cleveland, Ohio, is investigating conditions on the lakes. The U.S. Lake Carriers Association is in close touch with this committee, and the Dominion Marine Association is in correspondence with the lake carriers. An Atlantic Coast committee made its report, omitting the coasting ships from the recommendations. The recommendation for load line regulations for deep sea ships will probably go through at the coming session of the U.S. Congress.

D. H. Howe, Canadian Trade Commissioner, writes from Melbourne as follows:—In a statement tabled in the Australian Parliament recently by the Commonwealth Government, it was explained that the object in establishing the Commonwealth line of steamships was to provide for the transportation of Australian produce to the world's markets. The primary object was not profits, but rather to prevent Australia being isolated through the world's shipping distast.

Independent Pneumatic Tool Co., Chicago, Montreal and Toronto, has issued circular 34 "Thor Pneumatic Tools—Aids to Industry."

Oct. 1 to 6 Maintenance of Way Master Painters' Association, Buffalo, N.Y.; E. E. Martin, Union Pacific Rd., Kansas City, Mo.
